Costa Rica: Staff Report for the Second Review Under the Stand-By Arrangement; Press Release on the Executive Board Discussion; and Statement by the Executive Director for Costa Rica

In the context of the Second Review Under the Stand-By Arrangement, the following documents have been released and are included in this package:

- The staff report for the Second Review Under the Stand-By Arrangement was prepared by a staff team of the IMF, following discussions with the officials of Costa Rica that ended on November 10, 2009. Based on information available at the time of these discussions, the staff report was completed on November 30, 2009. The views expressed in the staff report are those of the staff team and do not necessarily reflect the views of the Executive Board of the IMF.
- A press release summarizing the views of the Executive Board as expressed during its December 16, 2009 discussion of the staff report that approved the Second Review Under the Stand-By Arrangement.
- A statement by the Executive Director for Costa Rica.

The documents listed below have been separately released

Letter of Intent sent to the IMF by the authorities of Costa Rica*
Supplement to the Memorandum of Economic and Financial Policies by the authorities of Costa Rica*

*Also included in the Staff Report

The policy of publication of staff reports and other documents allows for the deletion of market-sensitive information.

Second Review Under the Stand-By Arrangement

Prepared by the Western Hemisphere Department (In consultation with other departments)

Approved by Miguel A. Savastano (WHD) and Dominique Desruelle (SPR)

November 30, 2009

EXECUTIVE SUMMARY

- Costa Rica's economy is slowly emerging from recession. Economic activity is expanding but a number of key sectors (commerce, construction, and tourism-related industries) are still lagging. Inflation has fallen to historically low levels; there have been no balance of payments pressures; and the financial sector remains stable.
- *Performance under the Stand-By Arrangement (SBA) has remained very strong*. All quantitative performance criteria for end-September were met, most with considerable margins. The authorities have continued to treat the SBA as precautionary.
- The outlook for a gradual recovery amid domestic and external stability remains the central scenario. Real GDP growth is expected to rise to 2.3 percent in 2010, following a 1.5 percent contraction in 2009. Inflation is on track to fall to 5 percent (12-month basis) by end-2009 and remain within the central bank's target band of 4–6 percent in 2010.
- **Program risks have declined further and now appear broadly balanced**. The main threat to the growth outlook is the possibility of a slower-than-expected global recovery. Weak revenue performance remains a risk to the program.
- The scope for further policy easing is limited. The program provides room for further fiscal stimulus in early 2010, followed by moderate withdrawal to keep financing needs in check. Upside risks to the inflation outlook suggest that the authorities should continue to maintain a cautious approach to monetary easing.
- The reduced uncertainty about the external environment and lower program risks justify modification of the frequency of program reviews from quarterly to biannual. With this modification, the third (and final) program review would take place in June 2010.

I. RECENT DEVELOPMENTS¹

1. Developments since the first program review were in line with the outlook discussed in IMF Country Report No. 09/303. The recovery of Costa Rica's economy is gradually taking hold (Figure 1). In the second quarter of 2009, the decline in real GDP slowed to -

2.4 percent (y/y), and in the third quarter the indicator of economic activity (IMAE) rose 1 percent (q/q, seasonally adjusted). However, the recovery has been largely driven by manufacturing, while other sectors (commerce, construction, and tourism-related industries) remain depressed. Headline and core inflation continued to fall in October, to 4.0 and 5.7 percent (12-month basis), respectively, while median annual inflation expectations declined to 7.3 percent, approaching the ceiling of the central bank's inflation target range for 2010.

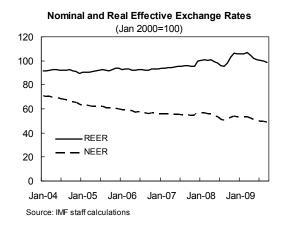

Source: Banco Central of Cost Rica

- 2. Although the slow recovery has continued to weigh on government revenues, the fiscal deficit has been below the program limits. Revenues of the central government through September were 7.7 percent lower than during the same period of 2008, mainly owing to a sharp drop in import-related taxes, including sales and excise taxes collected at customs (Box 1). During the same period, the central government's noninterest spending rose strongly (23.6 percent) but remained below the levels assumed in the program (owing partly to lower-than-projected inflation and a slower pace of hiring). As a result, the deficit of the central government in the first nine months of the year was below program projections (by 0.3 percent of GDP). Interest rates on domestic debt have fallen by more than 200 bps since September (to about 9.9 percent for 3-year benchmark bonds), partly as a result of a reduced volume of issuances.
- 3. *Monetary conditions have begun to ease*. Market interest rates did not fall in tandem with the July cut in the policy interest rate. However, during October market interest rates ("tasa pasiva") fell by 250 bps and have since remained on a downward trend. The real effective exchange rate (REER) continued to depreciate during the third quarter, largely due to the fall in inflation. Since mid-August, the *colón* has remained continuously below the

¹ Discussions on the second program review were held in San José during November 2–11, 2009. The staff team comprised A. Bauer (Head), M. Nozaki (all WHD), and O. Melander (SPR), and was joined by J. Gramajo (OED) and F. Delgado (Regional Resident Representative) in some meetings. The mission met with Finance Minister Phillips, Central Bank Governor Gutiérrez, other senior officials, representatives of the financial sector, and the economic teams of the leading presidential candidates. The staff team overlapped with an MCM technical assistance mission on the financial sector safety net.

ceiling of the currency band. Bank credit to the private sector remained anemic, growing by less than 1.5 percent during January—September. Banks continued to repay external credit lines and strengthened their net foreign asset positions. Solvency and credit quality indicators of the banking system deteriorated slightly in the third quarter, but remain at comfortable levels.

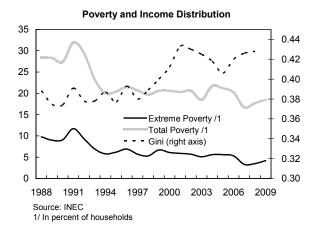

4. There have not been significant balance of payments pressures. In the first

half of 2009, imports collapsed and exports experienced a significant contraction. As a result, the external current account deficit turned into broad balance, while the capital account posted a modest surplus (0.4 percent of GDP), despite a significant slowdown in FDI. In the third quarter, exports started to recover while import growth remained subdued. As a result, as of end-September the trade deficit was substantially lower than in 2008. Net international reserves as of mid-November stood at about \$4 billion, roughly the same amount as of end-2008 (excluding the additional SDR allocation).

- 5. **Performance under the Stand-By Arrangement (SBA) has continued to be strong** (Table 1). All quantitative performance criteria for end-September were met, most with considerable margins. Base money growth at end-September was somewhat above program projections, reflecting a temporary spike in commercial bank deposits at the central bank, which was subsequently reversed.
- 6. Unemployment and indicators of poverty and income inequality worsened as a result of the economic downturn. The annual household survey shows that the unemployment rate rose from 4.9 percent to 7.8 percent and the share of poor households from 17.7 percent to 18.5 percent from

mid-2008 to mid-2009. Income distribution also worsened, with the income share of the lowest quintile falling by ½ of a percentage point. The deterioration in these indicators was less severe than anticipated, partly as a result of the fall in inflation and higher government transfers. Public sector hiring (mainly police officers and teachers) also mitigated the increase in the unemployment rate.

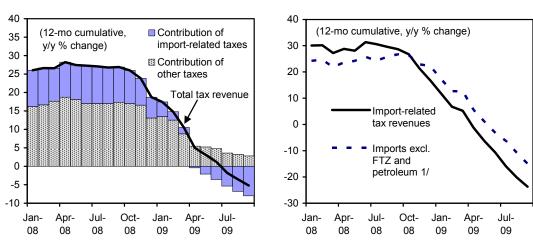

7. **Parliamentary discussions of a number of important economic laws have been protracted**. The Assembly passed the supplementary budget for 2009 in October. However, no progress was made in approving pending legislation on central bank recapitalization, consolidated financial sector supervision, and a budget support loan from the World Bank (for \$500 million). The proximity of the general elections (February 2010) does not bode well for their approval before mid-2010.

Box 1. Factors Behind the Sharp Fall in Tax Revenue

The sharp decline in tax revenues in 2009 is mostly attributable to import-related taxes (import duties and sales and consumption taxes collected at customs). In the first nine months of the year, import-related taxes were 30 percent lower than in the same period of 2008.

About two-thirds of the decline in import-related tax revenue is explained by a lower tax base, as the value of imports in *colones* (excluding free trade zones and petroleum) declined by 22 percent through September. The rest is explained by a decline in the implicit effective tax rate, caused by the sharp contraction of certain imported goods that are highly taxed.

Imports of durable goods, for example, fell by 38 percent during January–September. Since cars and domestic electrical appliances are subject to above-average import tariffs and excise tax rates, the lower durable goods imports led to a more-than-proportional decline in tax revenues. The negative impact on revenues was magnified by the fact that the general sales tax is levied on the import price including tariffs and excise taxes. Revenues from car imports alone were down by 0.5 percent of GDP in the first nine months of the year, compared to the same period of 2008. In addition, the authorities estimate that the implementation of CAFTA-DR has reduced import duties by about 0.2 percent of GDP.

7

II. OUTLOOK AND RISKS

- 8. The economic outlook has not changed significantly since the first program review.² The central scenario continues to assume a gradual recovery with real GDP growing by 2.3 percent in 2010. Annual inflation is on track to fall to 5 percent by end-2009, and remain within the central bank's target band of 4–6 percent in 2010. In view of the continued import contraction and strength of services exports, the external current account deficits in 2009 and 2010 are projected to be somewhat lower than previously envisaged (3 percent and 4.5 percent of GDP, respectively).
- 9. **Risks to the outlook have declined further and now appear broadly balanced**. A slower-than-expected recovery of Costa Rica's main trading partners presents the main risk to growth. However, there are also some upside risks given the recent opening of the telecommunications and insurance sectors to private operators, which could attract additional foreign direct investment. Short-term risks to the balance of payments have moderated with the recent strengthening of the *colón*, the revised outlook for the current account deficit, and the seasonal pick up of foreign exchange inflows expected by year-end. Weak revenue performance remains the main risk to the program, as it could lead to higher-than-projected fiscal deficits and domestic financing requirements.

III. POLICY DISCUSSIONS

10. There was agreement that the SBA continues to provide a sound framework to bolster confidence and support the recovery. Policy discussions focused on the size and phasing of fiscal stimulus in 2010, the appropriate monetary policy stance, the next steps in the transition to greater exchange rate flexibility and inflation targeting, and the health of the financial sector. The authorities reiterated their intention to continue treating the SBA as precautionary.

A. Fiscal Policy

11. The fiscal deficit targets agreed during the first review were maintained, despite the lower-than-projected revenues. The targets were seen as continuing to strike a reasonable balance between the goals of supporting domestic demand and containing the increase in government borrowing and public debt. Compared to the projections in IMF Country Report No. 09/303, the revised program contemplates 0.3 percent of GDP of lower tax revenues in 2009. A slower pace of execution of budgeted spending (including public investment) is expected to offset the lower revenues and allow to comply with the end-year deficit targets for the central government and the combined public sector (4.1 percent of GDP and 4.8 percent of GDP, respectively) without additional policy measures. Total revenue and expenditure projections for 2010 were adjusted for the lower level of revenues and

_

² See IMF Country Report No. 09/303, pp. 7–8

expenditures now projected for 2009; the deficit targets for the central government and the combined public sector, however, remain the same as those agreed during the first review (4.1 percent of GDP and 4.7 percent of GDP, respectively).

1/ IMF Country Report No. 09/303.

12. The fiscal program for 2010 contemplates some backloaded withdrawal of fiscal stimulus. To allow more time for the recovery of private demand, the program provides for a positive fiscal impulse in the early part of the year and a withdrawal of stimulus in the latter

part. There was agreement on the desirability of relying on external financing to cover a significant share of the government's borrowing needs in 2010. However, the authorities noted that this strategy would hinge on obtaining parliamentary approval for external borrowing (including the US\$500 million budget support loan from the World Bank that has already been submitted to the Assembly). If approval of external borrowing was not forthcoming, the authorities would continue to meet their financing needs in the domestic market.

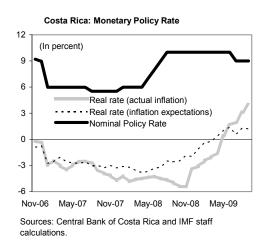

Source: IMF staff calculations.

B. Monetary, Exchange Rate, and Financial Sector Policies

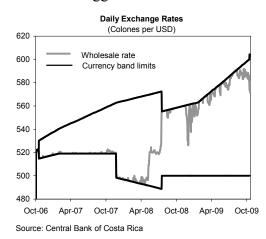

13. There was agreement that a cautious easing bias for monetary policy remained appropriate in the near term. The continued downward trend of core inflation and inflation expectations, and the presence of a negative output gap bode well for compliance with the

inflation target for 2010 (4–6 percent) with the present stance. The stickiness of inflation and depreciation expectations (currently around 7 percent) and the fact that the dampening effects of the fall in commodity prices of early 2009 will not recur, however, represent upside risks.³ Staff noted that the recent rise of the real policy rate had increased the scope for policy maneuver, but stressed that more aggressive interest rate easing should await firmer evidence of lower inflation (and depreciation) expectations.

14. The authorities reiterated their intention to complete the transition toward greater exchange rate flexibility and inflation targeting by end-2010.⁴ They felt that the recent fluctuation of the colón away from the ceiling of the currency band and the decline in inflation provided favorable conditions for advancing further in this direction. In particular, the authorities intended to maintain the annual rate of crawl for the ceiling of the currency band at 9 percent and review regulations for foreign currency derivatives to speed the development of domestic hedging instruments. The mission suggested to also seize the

opportunity to re-introduce a negative rate of crawl for the floor of the currency band, and reiterated the advice from the 2009 Article IV consultation regarding the need to clarify the central bank's role in the foreign exchange market and improve monetary operations. While they concurred with the latter recommendations, the authorities saw a strong case for maintaining the current horizontal floor for the exchange rate band as they were concerned that too many changes in the parameters could unsettle expectations.

³ Inflation and depreciation expectations are measured by the central bank through a monthly survey.

⁴ The exchange rate regime of Costa Rica is classified in the category of "other managed" arrangements in the current IMF classification.

10

15. There was agreement that the financial sector had weathered the downturn relatively well and that continued vigilance remained appropriate. The authorities and financial sector representatives expressed satisfaction about the resilience of the quality of credit portfolios. As of end-September 2009, the banking system's nonperforming loan ratio stood at 2.1 percent, about one percentage point higher than one year earlier. Nonperforming loans were expected to continue rising, albeit at a moderate rate. The mission found that the authorities are on track to fulfill the end-December structural benchmarks on submitting legislation to create a limited deposit insurance scheme and strengthen the bank resolution framework. A first draft of the law has been prepared and is currently under revision.

C. Program Modalities

16. Considering the lower uncertainty about the external environment and the lower program risks, it was agreed to modify the frequency of program reviews from quarterly to biannual. The program would maintain quantitative performance criteria and indicative targets for end-December 2009 and end-March 2010. The main consequence of the proposed modification would be to eliminate the review originally scheduled for late March 2010 and have the next (and final) program review in late June 2010. In addition, the availability date of the fourth purchase would be moved forward, to January 29, 2010 (Tables 1–3 in the attached Memorandum of Economic and Financial Policies). The mission welcomed the progress made by the authorities in implementing recommendations of the recent safeguards assessment. The central bank has hired an external auditor to conduct annual audits of its financial statements from 2008 onwards, and to prepare an analysis of existing gaps between the central bank's accounting practices and international financial reporting standards (IFRS).

IV. STAFF APPRAISAL

17. *The Costa Rican economy is showing clearer signs of recovery*. Economic activity has been growing for several months on a seasonally adjusted basis, even though this expansion is not yet broad-based. Inflation has moderated to a historically low level, there have been no balance of payments pressures, and the financial sector remains stable. These developments are broadly consistent with the staff's projections at the time of the first program review in September.

⁵ The Technical Memorandum of Understandings (TMU) remains unchanged from the first review (IMF Country Report No. 09/303).

_

- 18. Performance under the precautionary SBA with the Fund has continued to be very strong, as the authorities met all quantitative performance criteria for end-September. Immediate risks to the program have declined further, especially the likelihood of balance of payments and exchange rate pressures. Weak revenue performance remains a risk, as it could lead to higher-than-projected fiscal deficits and domestic financing requirements.
- 19. Fiscal policy should continue to strike a balance between supporting domestic demand and keeping government borrowing in check. In the first three quarters of 2009, fiscal policy has provided timely support to domestic demand, despite a somewhat slower than projected execution of public spending. The program for 2010 provides room for some additional fiscal stimulus in the early part of the year, to allow more time for private demand to recover.
- 20. A gradual easing bias for monetary policy remains adequate for the near term. Recent inflation and exchange rate developments have increased the room for policy maneuver, but there remain upside risks to the inflation outlook that warrant maintaining a cautious approach to monetary easing. Staff welcomes the authorities' commitment to advance in the transition toward inflation targeting and greater exchange rate flexibility. It encourages them to seize the opportunity to clarify the central bank's role in the foreign exchange market and improve the framework to conduct monetary operations, in line with the staff's recommendations of the recent 2009 Article IV consultation.
- 21. While progress is being made on some structural reforms, the continued delay in parliamentary approval of a number of important economic laws is disappointing. Good progress is being made toward the submission of legislation to create a limited deposit insurance and strengthen the bank resolution framework (end-December structural benchmarks under the program), and the authorities are implementing key recommendations of the safeguards assessment. Staff reiterates the importance of approving legislation on central bank recapitalization, consolidated financial sector supervision, and foreign financing for the 2010 budget.
- 22. **Staff recommends the approval of the second review under the SBA**. Performance under the program has been strong, and the authorities' policies continue to be adequate to support economic recovery while maintaining internal and external stability.

^{1/} Combined Public sector = Central government + Central bank + Other public enterprises and entities (excluding ICE).

^{2/} IMF Country Report No. 09/303.

^{3/} TUDES are inflation indexed bonds of the central government. The inflation adjustment of principal is not reflected as interest expenditure in the fiscal accounts of the Costa Rican authorities, but is added here to the IMF presentation of the fiscal deficit and public sector debt.

^{4/} The revision from IMF Country Report No. 09/303 reflects an application of the residency criterion to measure external debt.

Letter of Intent

San José, November 18, 2009

Mr. Dominique Strauss-Kahn Managing Director International Monetary Fund Washington, D.C.

Dear Mr. Strauss-Kahn:

- 1. The purpose of this letter is to inform you about the progress in the implementation of our economic program, which is being supported under the Stand-By Arrangement (SBA) approved by the IMF Executive Board on April 10, 2009. The attached supplement to the Memorandum of Economic and Financial Policies (MEFP) summarizes developments since the completion of the first program review on September 23, 2009, and describes modifications to the program.
- 2. Macroeconomic developments have been broadly in line with projections made at the time of the first program review. The decline in real GDP moderated in the second quarter of 2009, mainly reflecting a recovery in the manufacturing sector. Inflation fell to 4 percent in October, and inflation expectations are gradually approaching the central bank's inflation target range for 2010. The external current account deficit is likely to be smaller than projected, and in the past two months the *colón* has traded continuously below the ceiling of the currency band. Liquidity and solvency indicators of the banking sector remain adequate.
- 3. Performance against the program targets remains very strong. All quantitative performance criteria for end-September were met, most with significant margins. Work is underway toward the implementation of the two end-December structural benchmarks (submission of draft laws to create a deposit insurance scheme and strengthen the bank resolution framework).
- 4. In light of this performance and our continued commitment to the program, we request completion of the second review under the SBA. Our intention remains to treat the arrangement as precautionary. We are requesting to change the frequency of program reviews from quarterly to biannual, given reduced uncertainty about the external environment and lower program risks, and bring forward the availability date of the fourth purchase under the arrangement. The third and final program review would be expected to take place in late June 2010. The program's quantitative performance criteria and indicative targets for end-December 2009 and end-March 2010, and remaining structural benchmarks are set out in Tables 1 and 2 of the attached supplement to the MEFP.

| 5. We believe that the policies described | d in the attached supplement to the MEFP are |
|--|--|
| adequate to meet the objectives of our progra | am. However, if needed, the government stands |
| ready to take additional measures. In accordance | , , |
| 3 | ith regard to policy actions related to this program |
| continuous communication with the 1 and wh | in regard to policy actions related to this program |
| Sincerely yours, | |

Supplement to the Memorandum of Economic and Financial Policies

November 18, 2009

- 1. **Recent developments.** Macroeconomic developments have been broadly in line with projections made at the time of the first program review. The decline in real GDP moderated in the second quarter of 2009 (to -2.4 percent y/y, from -4.5 percent in the first quarter), mainly reflecting a recovery in the manufacturing sector. Moreover, in September the indicator of economic activity rose 0.3 percent from the previous month (seasonally adjusted), marking the seventh consecutive month of positive growth. In October, headline and core inflation fell further, to 4.0 and 5.7 percent (v/v) respectively, while median 12-month inflation expectations declined to 7.3 percent, gradually approaching to the central bank (BCCR)'s inflation target range of 4-6 percent for end-2010. In the first half of 2009, the external current account was broadly in balance, whereas the capital account posted a modest surplus (0.4 percent of GDP), despite a significant slowdown in FDI. In the third quarter, exports showed signs of recovery while import growth remained subdued. As a result, the trade deficit through September was substantially lower than during the same period last year. In addition, the colón has traded continuously below the ceiling of the currency band since mid-August. In the banking sector, the aggregate nonperforming loan ratio and the capital adequacy ratio deteriorated slightly, but liquidity and solvency indicators remained adequate.
- 2. **Performance under the program**. All quantitative performance criteria for end-September were met, most of them with significant margins. Base money growth at end-September was somewhat above program projections, reflecting a temporary spike in commercial bank deposits at the BCCR that reversed during October.
- 3. *Macroeconomic framework*. The outlook for 2009 and 2010 remains broadly unchanged from the first program review. The macroeconomic framework assumes a gradual recovery with real GDP growth of around 2.5 percent in 2010, following a 1–1.5 percent contraction in 2009. Inflation is on track to fall to 5 percent (12-month basis) by end-2009, and is expected to remain within the central bank's target band of 4–6 percent in 2010. The external current account deficit is now expected to be somewhat smaller than previously projected at 3.0 percent and 4.5 percent of GDP in 2009 and 2010, respectively.
- 4. *Fiscal policy*. Central government revenues through September were 7.7 percent lower than during the same period of 2008, mainly owing to a sharp drop in import-related taxes (including sales and excise taxes collected at customs). This performance was somewhat weaker than assumed in the program, and revenues for the whole year 2009 could fall short of program projections by about 0.3 percent of GDP. At the same time, central government spending has been lower than projected, and we expect some underexecution to persist through the end of the year. As a result, we are keeping the program target for the overall central government deficit

in 2009 unchanged at 4.1 percent of GDP. The deficit target for 2010 of 4.1 percent of GDP also remains unchanged, although with lower estimates for both revenues and expenditures in light of the anticipated underperformance in 2009. Our quarterly fiscal program for 2010 envisages a gradual withdrawal of fiscal stimulus. The program allows for a small positive fiscal impulse during the first half of the year, to provide continued support to domestic demand until the recovery of the private sector strengthens.

- 5. **Monetary and exchange rate policies**. The downward trend of core inflation and inflation expectations, and the persistence of a negative output gap suggest that the inflation target for 2010 (4–6 percent) is achievable. However, there are some upside risks to the outlook as the dampening effect of the fall in commodity prices of early 2009 will unwind, and depreciation expectations and nontradables inflation remain above the target range. In view of these risks, the BCCR will continue to maintain a cautious approach to monetary policy easing. Our exchange rate policy will remain guided by the objective of gradually achieving greater flexibility of the *colón*.
- 6. **Safeguards assessment**. The recommendations of the safeguard assessment of the BCCR that was completed in July 2009 are being implemented. In particular, the BCCR has appointed an external auditor to conduct annual audits of the BCCR financial statements from 2008 onwards. The scope of the audit includes an analysis of the existing gaps between the BCCR's accounting practices and IFRS, in order to establish an action plan for the implementation of IFRS by 2011.
- 7. **Program monitoring**. The program will continue to be monitored on a quarterly basis, by quantitative performance criteria, indicative targets, and structural benchmarks. We are requesting to change the frequency of program reviews from quarterly to biannual, given reduced uncertainty about the external environment and lower program risks. The next and final program review is therefore expected to take place in June 2010. The quantitative performance criteria and indicative targets for end-December 2009 and end-March 2010 are set out in Table 1. The structural benchmarks of the program and the phasing of access under the arrangement are set out in Tables 2 and 3, respectively.

Press Release No. 09/470 FOR IMMEDIATE RELEASE December 18, 2009 International Monetary Fund Washington, D.C. 20431 USA

IMF Executive Board Completes Second Review Under Stand-By Arrangement with Costa Rica

The Executive Board of the International Monetary Fund (IMF) completed on December 16, 2009 the second review of Costa Rica's economic performance under a program supported by a 15-month Stand-By Arrangement (SBA). The authorities have indicated that they will continue treating the arrangement as precautionary.

The SBA was approved on April 13, 2009 (See Press Release No. 09/124) for SDR 492.3 million (about US\$783.5 million) Completion of the review makes an additional SDR 41.025 million (about US\$65.3 million) available for disbursement, bringing the total resources that are currently available to Costa Rica under the arrangement to SDR410.25 million (about US\$652.9 million).

Following the Executive Board's discussion on Costa Rica, Mr. Murilo Portugal, Deputy Managing Director and Acting Chair, stated:

"Costa Rica's performance under the Stand-By arrangement with the Fund is commendable. An economic recovery is gradually taking hold, inflation has moderated to a historically low level, and the financial sector has remained sound. The authorities' economic program has helped cushion the impact of the global downturn and is providing a solid framework to support the recovery. Economic policies will continue to strike a balance between supporting domestic demand in the near term and maintaining domestic and external stability to foster sustained growth over the medium term.

"Fiscal policy has provided timely support to domestic demand in 2009, and the fiscal program for 2010 allows room for some additional stimulus in the early part of the year. Afterwards, the authorities plan to gradually unwind the fiscal stimulus as the recovery of private demand takes hold.

"Inflation has continued to decline and the exchange rate has moved toward the middle of the currency band. These developments have increased the central bank's room for policy maneuver, although upside risks to the inflation outlook warrant maintaining a cautious

approach to monetary easing. The more benign domestic and global environment also provides an opportunity to further modernize exchange rate and monetary operations, and advance in the transition toward inflation targeting.

"The banking sector has weathered the cyclical downturn well, and liquidity and solvency indicators remain adequate. Further progress in the reform agenda remains important to strengthen the financial sector safety net, including the recapitalization of the central bank and passage of legislation to enable consolidated financial sector supervision," Mr. Portugal said.

Statement by Ramon Guzman, Executive Director for Costa Rica and Johny Gramajo-Marroquin, Senior Advisor December 16, 2009

We thank Staff for a comprehensive and well-written paper. Our authorities broadly agree with the Staff's assessment. Performance under the Program was very strong; all quantitative performance criteria for end-September were meet, most with significant margins. Work is underway to accomplish the two structural benchmarks for December: a) submission of draft laws to create a deposit insurance scheme, and b) strengthening of the bank resolution framework.

Recent developments. Macroeconomic events have been largely consistent with estimations made on occasion of the first program review. The economy has been recovering gradually. As a matter of fact, the decline in real GDP in the fist quarter of 2009 (-4.5 percent y/y) was less severe in the second quarter (-2.4 percent y/y), mainly due to a recovery in the manufacturing sector. In September, the indicator of economic activity (IMAE) increased 0.3 percent from the previous month (seasonally adjusted), which constitutes the seventh consecutive monthly increase. In November, annual headline and core inflation fell further, to 2.57 percent and 4.15 percent respectively, while average12-month inflation expectations declined to 7.4 percent, gradually approaching to the central bank's inflation target range of 4–6 percent for end-2010. In the first half of 2009, the balance of payments current account was broadly in balance, while the capital account observed a modest surplus (0.4 percent of GDP) despite an important slowdown in FDI. In the third quarter, exports showed signs of recovery while import growth remained subdued. As a result, the trade deficit through September was substantially lower than during the same period last year.

Economic outlook. The outlook for the rest of 2009 and for 2010 remains mostly unchanged from the first program review. In terms of economic activity, the macroeconomic framework assumes a gradual recovery with real GDP growth of around 2.5 percent in 2010, following a 1–1.5 percent contraction in 2009. Annual inflation is on track to fall to around 4 percent by end-2009, and is expected to be within the central bank's target band of 4–6 percent during 2010. The external current account deficit is now projected to be slightly smaller than previously projected at 3.0 percent and 4.5 percent of GDP in 2009 and 2010, respectively.

Fiscal policy. Central government revenues through September were 7.7 percent lower than during the same period in 2008, mainly owing to a sharp drop in import-related taxes (including sales and excise taxes collected at customs). This performance was somewhat weaker than assumed in the program, and revenues for the whole year 2009 could fall short of program projections by about 0.3 percent of GDP. At the same time, central government spending has been lower than projected, and it is expected some under-execution to persist through the end of the year. As a result, authorities are keeping the program target for the overall central government deficit in 2009 unchanged at 4.1 percent of GDP. The deficit

target for 2010 of 4.1 percent of GDP also remains unchanged, although with lower estimates for both revenues and expenditures in light of the anticipated underperformance in 2009. Authorities will continue to strike an adequate balance between supporting domestic demand and keeping public debt dynamics manageable. In that context, the quarterly fiscal program for 2010 envisages a gradual withdrawal of fiscal stimulus, however allowing a small positive fiscal impulse during the first half of the year in order to provide continued support to domestic demand until recovery of the private sector strengthens.

Our authorities believe that given the global economic reality, the exchange of information between nations is fundamental for the optimal application of tax systems, taking into account the current international practices.

Monetary policy. The descending trend of core inflation and inflation expectations, and the persistence of a negative output gap suggest that the inflation target for 2010 (4–6 percent) is feasible under the current monetary policy stance. Although there are some upside risks to the outlook related to the dampening effect of the fall in commodity prices of early 2009 that is expected not to come again, the Central Bank will continue to maintain a prudent approach to monetary policy easing.

Exchange rate policy. The *colón* has traded continuously below the ceiling of the currency band since mid-August. The authorities consider that this situation, along with the decline in inflation, provide some room for more flexibility in the exchange rate. Therefore, the exchange rate policy will remain guided by the objective of gradually increasing the flexibility of the *colón*.

Banking sector. In the banking sector, the aggregate nonperforming loan ratio and the capital adequacy ratio deteriorated slightly; however, liquidity and solvency indicators remained adequate.

Finally, the authorities believe that the ongoing policies are adequate to meet the objectives of their economic program, which has been effectively supported by the Stand-By arrangement. The authorities reiterate that they will continue treating the arrangement as precautionary.
