Sovereign Scorecard: Fiscal Section

FISCAL MANAGEMENT AND POLICY	
1. Overall fiscal performance	The fiscal balance is typically the major driver of changes to the debt stock. Large fiscal adjustment needs can have consequences for growth, political cohesion, and market confidence.
Overall fiscal balance (% GDP)	Simple average calculated from 10 years of historical data plus 3 years of projections.
2. Policy management & budget control	Of equal importance to recent fiscal outcomes is a strong capacity to respond to shocks and restore fiscal balances over the medium term.
Budget management & quality of fiscal rules (qualitative)	Focuses on budget transparency and accountability mechanisms, strength of medium-term fiscal framework, and quality of macroeconomic and fiscal projections.
Fiscal flexibility (qualitative)	Focuses on capacity to raise new revenue or reduce expenditure.

Sovereign Scorecard: Debt Section

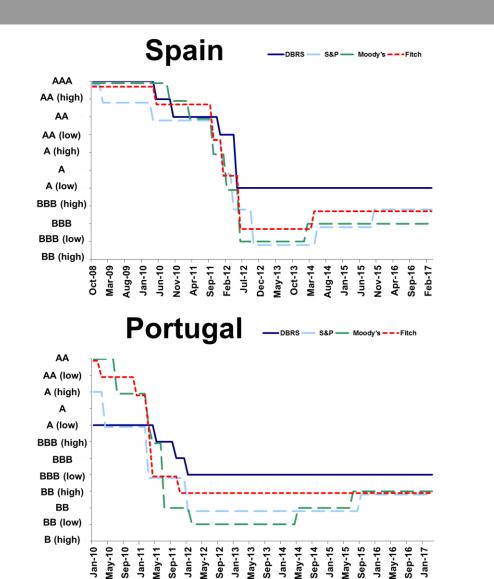

DEBT AND LIQUIDITY							
1. Debt Stock	The debt stock is typically the single largest source of financing needs.						
General government gross debt (% GDP)	Projected stock of debt as of the end of the next calendar year.						
2. Maturity structure and liquid assets	Large short-term financing needs can potentially overwhelm financing capacity, even if the overall debt stock appears manageable.						
Short-term public debt (% GDP)	Latest available data.						
Average maturity of public sector debt (years)	Latest available data.						
3. Susceptibility to debt shocks	A country's vulnerability to debt shocks is one of the primary risks to debt sustainability.						
Change in debt stock associated with adverse combined shock scenario (% GDP)	e Result of analyst-designed combined shock scenario from DBRS's debt sustainability analysis, measured as the total net change in the debt stock from the base year (time t) to the end of a five year time period (t+5).

The Merits of Accrual Accounting

The data we use

- Cash or accrual data from central governments, general governments, non-financial public sectors, public sectors
- We are compelled to rely on comparable data this is improving but still limited.
- Sources are national governments, multilateral institutions, private sector.

The data we lack

- Comprehensive data on liabilities
- Standardized accounting of assets
- Insufficient attention on management of assets

Merits of accrual accounting

- Strengthens <u>management</u> of public sector assets and liabilities, increases transparency and efficient delivery of public goods
- Makes public sector accounting <u>consistent</u> with national accounts, balance of payments, monetary & financial reporting
- Step toward better recognition of public sector assets and liabilities

Thank You
