

Figure 3.18. Vulnerability to Temperature Increase and Adaptation Prospects

Low-income developing countries, where the effect of temperature increase is estimated to have the most pernicious effect, tend to have much lower climate change adaptation capacity and readiness.

Sources: Notre Dame Global Adaptation Index; and IMF staff calculations.
 Note: The figure depicts the estimated effect of a 1°C increase in temperature on per capita output at horizon 0 against countries' score for adaptation readiness and adaptation capacity. A higher score indicates better adaptation capacity and more readiness.
