THE INTERNATIONAL DEVELOPMENT ASSOCIATION

BOLIVIA

**Initiative for the Heavily Indebted Poor Countries (HIPC)
Completion Point Document**

Prepared by the Staffs of the Fund and the IDA¹
In consultation with the Staff of the Inter-American Development Bank

September 4, 1998

I. INTRODUCTION

1. **In September 1997, the Executive Boards of the Fund and IDA decided that Bolivia was eligible for assistance under the Initiative for Heavily Indebted Poor Countries (HIPC) that would reduce the ratio of the net present value (NPV) of debt to exports from 259 percent projected for end-1997 to 225 percent (plus or minus 10 percentage points).**² It was agreed that Bolivia's external creditors will provide US\$448 million of debt relief in NPV terms (a reduction of about 13 percent in Bolivia's external public and publicly guaranteed debt). Directors also decided that the exceptional assistance from the Fund and IDA would be front-loaded, in view of Bolivia's heavy debt-service burden in the coming years, and they encouraged other official creditors to also front-load their assistance. In May 1997, the Board of the Inter-American Development Bank (IDB), Bolivia's largest creditor, had also agreed that Bolivia was eligible for relief under the Initiative, and supported a target of 225 percent for the ratio of the NPV of debt to exports.

2. **In September 1997, the Boards of the Fund and IDA scheduled the completion point for September 1998**, one year after the decision point. This shortening of the interim period took into account Bolivia's strong policy track record since 1985 and the strength of its current economic program, as well as the IDB's support for this shorter period. The specific conditions established for Bolivia to reach the completion point were:

- completion of the midterm review under the third annual arrangement of the ESAF arrangement approved in December 1994;
- Fund Board approval of a new ESAF arrangement;
- completion of financial sector and other structural measures, including those supported by IDA under the Capitalization Program Adjustment Credit;

¹Approved by Claudio Loser and Joaquín Pujol (IMF) and Masood Ahmed and Isabel Guerrero (IDA).

²**Bolivia—Final Document on the Initiative for the Heavily Indebted Poor Countries**, (EBS/97/165, 8/27/97) and (IDA/R97-109, 8/27/97).

- implementation of the social development policies monitored under the Initiative and supported by IDA and the IDB; and
- satisfactory assurances of the participation of all official creditors in the Initiative.

3. **This paper provides the assessment of Fund and IDA staff that Bolivia has satisfied the conditions for reaching the completion point under the HIPC Initiative.** Section II summarizes Bolivia's economic policies and performance, including progress on social reforms. Section III describes the status of creditor participation. Section IV updates the assessment of how Bolivia will benefit from the HIPC assistance, and Section V presents concluding remarks. This paper will be published in accordance with the recent decision of the Boards of the Fund and IDA to publish final decision and completion point documents for all HIPC countries after the paper is considered by the Boards of both institutions.³

II. BOLIVIA'S ECONOMIC POLICIES AND PERFORMANCE

A. The 1998 Economic Program

4. **The authorities' program for 1998 aimed to support an increase in economic growth from about 4 percent in 1997 to 4.5–5 percent in 1998, with a further reduction in poverty.**⁴ The program also sought to limit the inflationary effects of an increase in indirect taxes and reduce inflation slightly to 6.5 percent during 1998 (Table 1). After rising by over US\$100 million in 1997, net international reserves were to remain constant in 1998, while gross international reserves would be kept broadly stable in relation to imports and the short-term liabilities of the central bank. Key structural reforms included bringing the refineries of the state petroleum company (YPFB) to the point of sale, privatizing the state smelting company (Vinto), improving governance through judicial and customs reform, continued strengthening of financial sector supervision, and beginning a social dialogue on labor market reform (Box 1). To maintain macroeconomic stability and help offset a large part of the fiscal

³This decision was approved by the Fund Board on June 24 (EBD/98/64) and by the IDA Board on July 22 (IDA/R98-110).

⁴The program is described in the authorities' Memorandum of Economic Policies of January 20, 1998.

costs of structural reforms (especially the pension reform) implemented since 1995,⁵ the authorities adopted fiscal measures yielding the equivalent of about 2.5 percent of GDP, including a sharp increase in taxes on domestic petroleum products in December 1997. Nevertheless, the overall public sector deficit was targeted to rise from 3.3 percent of GDP in 1997 to 4.1 percent of GDP in 1998, as the cost of the structural reforms is projected to rise from 3 percent of GDP in 1997 to 5 percent of GDP in 1998. Net concessional external financing will likely reach 2.1 percent of GDP in 1998, including expected HIPC assistance. The Bolivian authorities are working with IDA and IDB to develop additional programs in the financial and social sectors, respectively, that could be supported by additional disbursements of 0.5 percent of GDP in 1998.

5. **So far in 1998, macroeconomic policies have remained on track.** In the first half of the year, the combined public sector deficit was less than programmed, the net domestic assets of the central bank rose as expected, and structural reforms were implemented on schedule. Consumer prices rose by 6.1 percent in the twelve months ended in August, in line with the program. Price performance benefited from the decline in world petroleum prices, following the adoption of an automatic link between domestic and international petroleum prices in December 1997. Net international reserves were kept unchanged in the first half of 1998, as programmed. Preliminary data suggest that economic activity rose by 4.7 percent in the first half of the year, led by rapid growth in construction, communications and financial services that more than offset the effects of *El Niño* on agricultural output.

B. Economic Program for 1998–2000

6. **The authorities' new medium-term economic program seeks a significant reduction in poverty by 2002 through faster economic growth and stronger social programs.**⁶ The authorities noted that the medium-term strategy that Bolivia has followed since 1985 has yielded significant gains on the inflation and external fronts. Nonetheless, growth per capita has averaged less than 2 percent a year this decade, and poverty and social conditions have improved only gradually (about 70 percent of the population remain in poverty). In assessing how to improve on this performance, the authorities saw no need for a major overhaul of the medium-term strategy. However, they believe that implementation of reforms has fallen short in some key areas, most notably with respect to social programs, the

⁵The 1996 pension reform (which took effect in May 1997) established a funded system of private individual retirement accounts, raised the retirement age and mandated a broader coverage of the formal workforce. Under the new system, the government lost social security tax revenue (1 percent of GDP), paid pensions to newly retired workers eligible to receive benefits under the old system (1 percent of GDP) and took over responsibility to pay private "complementary pensions" (1 percent of GDP), which had been unfunded.

⁶This program is explained in the authorities' Memorandum of Economic Policies and Economic Policy Framework Paper of August 14, 1998.

quality of public investment (following the fiscal decentralization of 1994–95) and governance. Also, a revision of labor legislation has just been placed on the reform agenda and civil service reform is still in the planning stages. The authorities cautioned that several factors, such as fragile confidence of residents and the steady decline in Bolivia's terms of trade since 1984, had diminished the growth-enhancing effects of the strategy. Moreover, the landlocked nature of the country has resulted in higher transport costs and meant that Bolivia needed deeper reforms to increase efficiency and foster economic growth.

7. **As in the past, the cornerstone of the program is structural reform**, which is supported by IDA, the IDB, the Fund, donor countries, and other external creditors. The authorities plan to emphasize improvements in education and health, fiscal decentralization, and governance. In addition, while financial supervision has improved considerably in recent years, the process of reform in that area needs to be completed to create full confidence in the financial system. Other reforms include completing the process of privatization, deepening domestic capital markets, continuing with the civil service reform, and liberalizing labor markets (Box 2).

8. **Under the program, macroeconomic stability will be maintained** through continued fiscal discipline and credit restraint. In particular, fiscal policy will emphasize generating more public savings to help boost Bolivia's relatively low national savings and hold the external current account deficit on a sustainable path. The exchange rate will continue to be set in an auction, with the floor price adjusted broadly in line with the inflation differential between Bolivia and its key trading partners.

9. **The authorities expect these policies to boost economic growth from 4.5–5 percent in 1998 to 5.5–6 percent by 2000 and to 6 percent and possibly more by 2002** (Table A). At the same time, inflation would decline by 0.5 percentage point a year to 4.5 percent by 2002, and gross international reserves would rise sufficiently to keep reserves equivalent to about 6.5 months of merchandise imports. Investment would continue to rise in relation to GDP, although the rate of growth in investment would taper off as the construction of the gas pipeline to Brazil is completed in 1999. Investment would be financed by higher private savings, related in part to the effects of the 1996 pension reform and the capitalization process, as well as by higher public savings.⁷ The external current account deficit would decline from over 8 percent of GDP in 1998 to less than 5 percent of GDP by 2002, and would be financed in full during this period by foreign direct investment and concessional lending from abroad.

⁷Under capitalization, 50 percent ownership and full management control was granted to the private investors who committed to make the largest investments in each enterprise. The remaining 50 percent of the shares were passed to the Bolivian population at least 21 years of age at end-1995.

Box 2. Structural Reform Agenda, 1998–2000

Strengthen education and health reform

1. In education, the government plans to reallocate budget resources from universities to primary and secondary education; increase the responsibility of local governments for education, which will allow for better school management and more parent participation; reward good teaching through a merit pay system; rehabilitate dilapidated schools; and ensure an adequate supply of learning materials. The government's recent five-year national plan calls for increased spending on basic health, expanded access to primary and preventive care for the poor, and improved coordination in services provided across different levels of government. The IDB and IDA are supporting these reforms through sectoral loans and, together with the government, have identified a core group of nonsalary items in education and health that will be protected from future cuts in public spending.

Develop national road network

2. The National Road Service (SNC) (by December 1998) will draw up a master plan for the national road system that will delineate the responsibilities of the national and local governments and, starting in 1999, the SNC will be financed with 70 percent of the tolls collected on national highways. The SNC will also study the costs of maintaining the system and the government will provide sufficient funding for maintenance in the budget starting in 2000.

Complete privatization

3. The government plans to privatize all remaining public enterprises, including those owned by the armed forces. The most important action is to privatize YPF's refineries by June 1999. The other parts of YPF still in the public sector are being privatized (the drilling service unit was sold by June 1998 and the remaining natural gas network, jet fuel stations, and bottling plants will be sold by March 1999). The government will also bring the state smelting company (Vinto) to the point of sale by October 1998. The government also plans to sell several smaller public enterprises over the next six months.

Strengthen financial sector further

4. By June 1999 the government will submit to congress a draft law to establish a deposit insurance system and to improve the system of resolving problems of banks in difficulty. This law will also curtail the role of the central bank in bank rescue operations to allow it to concentrate on monetary policy.

Deepen domestic capital markets

5. In June 1998 the superintendencies of pensions, securities, and insurance were consolidated into one superintendency, and an appeals body for financial matters (SRJ) was created. In September 1999 CONFIP will issue norms to subject nonbank financial intermediaries to the same legal and regulatory framework as banks, with a view to strengthening the system of microcredit.

Improve governance

6. Three independent legal institutions (the Judicial Council, the Ombudsman and the Constitutional Court) have been established since August 1997. The Judicial Council and the Ombudsman will become operational by December 1998, and the Constitutional Court by December 1999. The government will submit to congress draft laws on administrative procedures by June 1999, on penal code procedures and the civil process code by end-1999, and on a commercial code by end-2000. The government is carrying out a comprehensive customs reform, designed with the technical assistance of the IMF's Fiscal Affairs Department (FAD), and the authorities will aim to secure passage of a new customs law by June 1999.

Reform labor legislation

7. In May 1998 the government started a national dialogue with key business, labor, and political groups to seek a consensus for reforming the labor law, which is antiquated, overly complex and discourages employment in the formal sector. By end-1998, the government will develop a proposed draft law that will serve as a basis for discussion among the key business, labor and political groups.

1/ Estimate for 1997 refers only to BCG (see Appendix I for other vaccinations).						

C. Satisfactory Implementation of Social Policies

10. **Based on the joint assessment of IDA and IDB staff the authorities have made satisfactory progress, despite some delays, in implementing the policies and quantitative targets contained in the social matrix agreed at the decision point in 1997** (Table B and Appendix I). Several important programs and reforms initiatives are underway in education, health, child development, housing, and sanitation. These programs, financed by IDA, IDB, and bilateral donors, have a potentially large impact on social indicators and poverty reduction.

11. In **education**, coverage and completion rates for primary education have increased in line with targets; new textbooks incorporating indigenous languages have been produced and distributed and a national assessment system has been successfully implemented. In **health**, the percentage of births attended by trained staff increased from 30 percent to 45 percent; 80 percent of children are completing the vaccination cycle; the share of children treated for respiratory or stomach diseases has increased noticeably; and the share of families receiving protection against Chagas has almost doubled and the index measuring the incidence of malaria decreased from 20 to 15 percent. In June 1998 the authorities published a comprehensive national health strategy which proposed basic health insurance, an integrated childhood illness program, improved maternal and neonatal care, extensive immunization programs and better control of endemic diseases. In **rural development**, there is now a clear strategy for the use of social and rural development funds and a program to survey living standards regularly; also water and sanitation projects reached more than 180,000 households, compared with a target of 132,000.

12. **Nevertheless, several challenges and constraints require continued attention in order to strengthen the execution of programs and reforms underway, particularly in education, health, and child development.** Institutional capacity constraints mean that implementation of social programs and reforms has been slower than expected. Also, Bolivia is undertaking a needed strong fiscal adjustment, which limits the availability of budgetary resources and the pace of spending on key social and other programs.

13. The government is working with IDA to improve budgetary planning in the social sectors and to strengthen the execution capacity of social ministries through an institutional reform loan, as well as successor health and education reform loans. The government is also working with the IDB in the context of a sector adjustment loan to ensure the protection of fiscal resources for the implementation of key social programs in a way that is consistent with aggregate macroeconomic targets under the supported ESAF program and also designed to strengthen those programs contained in the social matrix aimed at developing the human capital of the poor. These efforts will be assisted by the debt service savings generated under the HIPC Initiative (Table 8). The ministry of finance, through its research unit (UDAPE), is also taking steps to strengthen the planning and monitoring of social spending, and will monitor the progress in reducing poverty with the set of core Development Assistance

Committee (DAC) indicators (incidence of extreme poverty; poverty gap ratio; inequality; child malnutrition; infant mortality rate; and maternal mortality rate).

III. STATUS OF CREDITOR PARTICIPATION

14. The assistance from IDA and the IMF committed to Bolivia at the decision point under the HIPC Initiative is conditional, inter alia, on satisfactory assurances of commensurate action by Bolivia's other creditors. Of the total of close to US\$450 million of debt assistance in NPV terms under the HIPC Initiative, **Bolivia's multilateral creditors** are to provide a little over US\$290 million (Figure 1). (Total debt service relief in nominal terms will amount to about US\$760 million, of which about US\$430 million represents savings on multilateral debt.) These creditors have confirmed that, at the completion point, they will provide assistance to reduce the NPV of their claims in accordance with the decision taken by the Boards of the IDA and the Fund at the decision point. Bolivia does not have outstanding arrears to multilateral creditors.

15. The **IDB** will provide assistance to Bolivia for US\$155 million in NPV terms (US\$253 million in nominal debt service savings) through a combination of: (a) a write-off of selected concessional loans from its Fund for Special Operations (FSO), and (b) the partial payment of interest on selected loans from its Ordinary Capital (OC) using its Intermediate Financing Facility (IFF), a long-established interest subsidy mechanism (Table 2). The write-off of selected FSO loans (principal and interest) in an amount of US\$55.4 million in NPV terms (US\$129 million in nominal terms) will be covered by a reduction in the FSO general reserve. In the case of selected OC loans, the NPV debt reduction will be achieved by subsidizing up to 5 percentage points of the applicable interest rate (subject to a floor of the net lending rate of 1.88 percent) by means of interest payments from the IFF as debt service falls due over the period 1998–2015. The reduction in debt service for Bolivia on this account will total US\$99.7 million in NPV terms (US\$124 million in nominal debt service savings) over the period. This will constitute a significant frontloading of the IDB's assistance, with over 60 percent of the NPV relief to be delivered by 2003.

16. **IDA** assistance amounts to US\$54 million in NPV terms, and is to be delivered through the use of resources from the HIPC Trust Fund to cover all debt service to IDA until these resources, including interest earned, are exhausted, most probably in early 2002 (Table 3). Total debt-service relief in nominal terms would amount to approximately US\$65 million. IDA's assistance under the HIPC Initiative would average US\$18 million a year in 1999–2001.

17. **Fund** assistance would take the form of a grant (equivalent to US\$29 million in NPV terms) deposited in an escrow account, which would accrue interest to be used to meet Bolivia's debt service to the Fund under an agreed schedule (Table 4). The Fund's assistance

Figure 1. Bolivia: Structure of HIPC Assistance, NPV terms at end-1997
(In millions of U.S. dollars)

Sources: Bank/Fund staff estimates.

is estimated to amount to about US\$5 million in 1998 and US\$10–11 million a year in 1999 and 2000, consistent with the need to significantly frontload the HIPC assistance for Bolivia.

18. The **Andean Development Corporation (CAF)** will participate through a contribution from its net income supplemented by allocating its technical cooperation funds for debt-relief purposes, as well as through donor contributions. **The Financial Fund for the Development of the Basin of the River Plate (FONPLATA)** is expected to refinance outstanding loans at a reduced interest rate and longer maturity, as well as through donor contributions. The **Nordic Development Fund** will participate through the HIPC Trust Fund, which will pay debt service due on behalf of the debtor until the resources set aside for this purpose are exhausted. The **International Fund for Agricultural Development (IFAD)** has approved a self-administered facility, which would provide debt-service relief to Bolivia. The **OPEC Fund** proposes to provide Bolivia with a US\$4 million balance-of-payments loan with a higher grant element than existing loans, the proceeds of which would be used to pay debt service on existing debt. For the remaining very small multilateral creditor, which has not provided specific modalities, it has been assumed that either grants or a concessional rescheduling would be used to deliver the required debt relief in NPV terms.

19. **Bilateral creditors** are to provide US\$157 million of debt relief in NPV terms. At their June 1997 meeting, **Paris Club creditors** agreed to top up Bolivia's Naples terms stock-of-debt operation to Lyon terms (80 percent NPV reduction), once Bolivia reaches its completion point under the HIPC Initiative. In addition, Bolivia can expect further relief on its ODA debt. In this regard, Japan has indicated its intention to provide further debt reduction—beyond rescheduling over 40 years with 16 years grace, at no more than the original concessional interest rate, as required under Lyon terms—on its ODA loans. Regarding **non-Paris Club bilateral creditors**, the authorities have recently reached concessional rescheduling agreements with Poland and Venezuela on terms at least comparable with those of the Paris Club.⁸ Bolivia has contacted Brazil, the only remaining creditor with obligations that could be considered reschedulable, to reach agreement on an appropriate rescheduling of these obligations on terms at least comparable with those of the Paris Club.⁹

IV. BENEFITS OF THE ASSISTANCE UNDER THE HIPC INITIATIVE

20. **The HIPC assistance is projected to reduce the end-1997 NPV of Bolivia's external public and publicly guaranteed debt to 218 percent of exports.** The ratio of the NPV of debt to exports after HIPC assistance is less than originally targeted, because

⁸The buyback agreement with Poland, a de-minimis creditor, is slightly more favorable than Lyon terms, while Venezuela agreed to cancel its claims on Bolivia.

⁹Bolivia has nonreschedulable debt obligations to China and Taiwan Province of China.

Bolivia's end-1997 external public and publicly guaranteed debt before HIPC relief is somewhat less than had been projected at the decision point (Table 5).¹⁰

21. **The HIPC assistance will reduce external debt and debt service substantially in the next few years.** The HIPC assistance is estimated to be significantly frontloaded, with about 40 percent of the assistance to be provided by 2002 and the remainder to be distributed over the period 2003–2037 (Figure 2). The NPV of debt-to-exports ratio (after HIPC assistance) would decline from about 220 percent in 1998 to under 200 percent in 2001 and to 150 percent by 2005 (Figure 3). The HIPC assistance would lower debt service as a share of exports by about 2 percentage points a year. The debt-service ratio (after HIPC assistance) would fall from 26 percent in 1997 to 23 percent in 1998 and about 19 percent in 1999, and to about 15 percent in 2005 and beyond.

22. **Based on the updated debt sustainability analysis (DSA), the assistance under the HIPC Initiative will reduce the vulnerability of Bolivia's external sector** (Box 3). The external current account deficit is projected to remain at 8 percent of GDP in 1998 and then decline gradually to 4 percent of GDP by 2005, as the recent sharp increase in foreign direct investment is assumed to wind down gradually (Table 6). The overall balance of payments is projected to register moderate surpluses, as foreign direct investment and net concessional financing would more than cover the current account deficits. A hypothetical 25 percent decline in the world price of metals (one of the scenarios in the sensitivity tests of the previous sustainability analysis) would boost the NPV debt-to-exports ratio to 228 percent in 1999, which is still high but below the threshold of 250 percent (Table 7).¹¹

23. **The updated DSA also continues to show that the public sector must continue to limit its borrowing to obligations with very long maturities and on concessional terms, to safeguard viability.** In the next several years, the authorities will strictly limit borrowing on nonconcessional terms.¹² In the medium term, as creditworthiness improves and GNP per

¹⁰The differences between the projections of the end-1997 NPV of debt that were made in September 1997 and the estimates made in September 1998 reflect the net effect of a stronger than expected exchange rate for the U.S. dollar vis-à-vis all other major currencies during 1997; a larger transfer of public enterprise debt to the private sector following the capitalization of the state petroleum company (YPFB); and lower discount rates (CIRRs) for most major currencies.

¹¹This sensitivity scenario assumes a permanent decline in metals prices that would occur over 1998–1999 (see Table 7).

¹²As an illustration of the importance of this, if hypothetically one quarter of the new concessional borrowing by the public sector were replaced by nonconcessional borrowing with six-year maturity and one-year grace, the debt service ratio would rise by 4 percentage points to 20 percent by 2005, more than offsetting the benefits of the HIPC assistance on the debt-service ratio.

Box 3. Bolivia: Assumptions Used in the Debt Sustainability Analysis (DSA)

- Annual average real GDP growth of 5 percent in 1998 and 1999, 5.8 percent in 2000, and 6 percent thereafter.
- Average export volume growth of 9.5 percent in 1998–2006 (largely driven by a rapid increase in gas exports via the pipeline to Brazil, a near doubling of the country's output of silver, zinc and lead by 2002 resulting from development of the San Cristóbal mine, and continued fast growth in nontraditional exports), and 6 percent growth thereafter.
- Import volumes are projected to fall by about 4 percent in 1999 following construction of the gas pipeline to Brazil. Volume growth would then rise to 4.5 percent annually in 2000–2004 and to slightly over 6 percent thereafter. The income elasticity of imports is assumed to be 1.25 between 1999–2003 and 1.1 thereafter.
- Official grants will gradually taper off from the equivalent of 2.4 percent of GDP in 1997 to under 1 percent in 2003 and less than 0.5 percent starting in 2012.
- Foreign direct investment will peak at 9 percent of GDP in 1998, reflecting the gas pipeline project before stabilizing at 4.5 percent of GDP from the beginning of the next decade.
- Total new external borrowing is assumed to decline from almost 5 percent of GDP in 1997 to about 3 percent in 2001–2010 and to about 2.5 percent thereafter. Concessional loans would gradually fall from 2.5 percent of GDP in 1997 to less than 1 percent in 2003.
- Following a decline of 6 percent in 1998, the terms of trade are assumed to slowly recover by an average of 1 percentage point per year in the following 5 years, before leveling off from 2004 onwards.
- Following the stock-of-debt operation with Paris Club creditors in December 1995 (Naples terms 67 percent NPV reduction), the projections assume at least comparable rescheduling terms on eligible debt from non-Paris Club official bilateral and commercial creditors. In addition to assistance under these traditional debt-relief mechanisms, the projections incorporate the assumed profile of exceptional assistance from all creditors under the HIPC Initiative.
- With respect to the DSA described in the final HIPC document (EBS/97/165 and IDA/R97–109, 8/27/97), the main differences in the assumptions are an upward revision of the medium-term path of private foreign direct investment (by about 2 percentage points of GDP a year on average) and a consequent upward revision of export volume growth for 2000–2005.

capita surpasses US\$1,000, it is expected that the country will rely less on concessional financing than is currently the case.

24. **The HIPC assistance will enable the authorities to intensify social reforms in a period when fiscal policy faces strong constraints** (Box 4). The combined public sector deficit has doubled between 1996 and 1998, mainly because of the sharp increase in the fiscal costs of structural reforms adopted since 1995 (Figure 4). At the same time, the structural reforms have led to a surge of foreign direct investment while national savings has remained relatively low, leading to the significant widening of the external current account deficit in

Figure 4. Bolivia: The Fiscal Cost of Reforms and the Fiscal Position, 1995-2002
(In percent of GDP)

Sources: Ministry of Finance; and Bank/Fund staff estimates.

1997–98. To keep the external current account deficit on a sustainable path, it is crucial for the government to return the fiscal deficit gradually to its level of 1996 (prior to the pension reform) to help strengthen national savings. In this context, the HIPC assistance is projected to reduce the government's external debt-servicing costs by 0.7 percent of GDP a year in 1999–2001, making room for an increase in social sector spending from 10.8 percent of GDP in 1997 to 11.6 percent of GDP in 2001 (Table 8).

Box 4. Key Aspects of the Social Reform Program

Education

- reallocate budget resources from universities to primary and secondary education;
- increase the responsibility of local governments for education, to help ensure better school management and more parent participation;
- reward good teachers through a merit pay system;
- rehabilitate dilapidated schools; and
- ensure an adequate supply of learning materials.

Health

Implement recently published five-year national health plan which calls for:

- increased spending on basic health;
- reduced incidence of endemic diseases that affect a large portion of the population, particularly in rural areas;
- improved access of mothers and children to an integrated package of basic and nutrition services;
- improved the payment/reimbursement mechanisms for health interventions, through a basic health insurance scheme; and
- improved coordination of services provided across different levels of government.

V. CONCLUSIONS

25 Bolivia's economic policies and performance remain very strong, and IDA and IDB staff believe that, despite some delays, the authorities have made satisfactory progress on social policies within the constraints imposed by the fiscal situation. Moreover the HIPC assistance will lower the NPV of debt-to-export ratio at end-1997 to slightly below the original target of 225 percent, reduce the vulnerability of the economy to external shocks and make possible a permanent exit from further reschedulings. All multilateral and Paris Club creditors have provided satisfactory assurances of their participation in the HIPC Initiative for Bolivia, and strong efforts have been made to reach reschedulings on comparable terms with other bilateral creditors. **Accordingly, the staffs of the Fund and IDA believe that Bolivia has satisfied the conditions for reaching the completion point under the HIPC Initiative.**

Addendum

The Boards of the World Bank and the IMF in September 1998 decided that all conditions had been met and that Bolivia had reached the completion point under the HIPC Initiative. Creditors are providing assistance of US\$448 million in present value terms, reducing the NPV of debt-to-exports ratio to 218 percent.

Sources: Central Bank of Bolivia and staff estimates.

1/ Excludes grants for debt-reduction operations.

2/ Includes direct investments, commercial bank short-term capital flows, and errors and omissions.

3/ Granted by Paris Club creditors and Brazil.

4/ Official transfers and loans to public sector.

5/ Export denominator is calculated as a backward looking three-year average.

2011-16	14.4	16.2	18.4

Sources: Central Bank of Bolivia; and staff estimates.

1/ Before and after HIPC assistance.

2/ Metal export prices are reduced by a cumulative 25 percent over the 1998-99 period. After the initial decline, metal export prices rise as in the baseline. It is assumed that the government borrows to cover half of the shortfall for the first three years. The extra borrowing carries market interest rates, with maturity of 11 years and 3-year grace.

3/ Concessional borrowing is reduced by 25 percent throughout the whole period, while keeping the net external financing of the public sector unchanged. The implied additional borrowing is undertaken on commercial terms with a 5 year maturity and 1 year grace period.

4/ In percent of three-year exports of goods and services averages.

5/ In percent of current year exports of goods and services.

Sources: Fund and Bank Board decisions, completion point document, final HIPC documents, preliminary HIPC documents, and staff calculations.

1/ In percent of NPV of debt at completion point, after full use of traditional debt relief mechanisms.

2/ Eligible under fiscal/openness criteria; NPV of debt to exports target chosen to meet NPV of debt-to-revenue target of 280 percent.

3/ Nonreschedulable debt to non-Paris Club official bilateral creditors and the London Club, which was already subject to a highly concessional restructuring, are excluded from the NPV of debt at the completion point in the calculation of this ratio.

4/ Equivalent to SDR 200 million.

5/ Debt situation needs to be revisited once the current conflict has ended and a new recovery program agreed.

Bolivia: Programmed Actions in Social Sector Under the HIPC Initiative

Policy Action	Verifiable Indicator	Quantitative Targets	Completed/In Progress	Observations
	Targets for number of females that complete 5 th grade in urban and rural areas.	Urban Base 41,000 1997 43,000 1998 46,000 Rural Base 29,000 1997 30,000 1998 32,000	Yes Yes	<ul style="list-style-type: none"> The observed value is 43 thousand (same as the target). It is based on the preliminary enrollment list from March 1998. The observed value is 30 thousand (same as the target). It is based on the preliminary enrollment list from March 1998.
5. Improve quality of basic education.	Targets for number of beneficiary schools implementing quality improvements.	Cumulative number of beneficiary schools in quality improvement programs (such as PASE, PIME,, and PIE) Base NA 1997 9,000 1998 15,221	No	The targets were set in accordance to the PASE, PIE, y PIME programs. However, the current administration has discontinued these programs. The programs lacked appropriate financing, and there were problems with justification of spending by municipal governments. The ministry of education is planning to replace the above with educational projects included in the Educational Reform II loan of the World Bank.
	Development of an action program for continued implementation of school-level quality improvement programs.		Yes	The plan has been drafted with cost estimates and it relates to the educational projects included in the Educational Reform Project II of the World Bank.
	Strategy to provide a minimum of textbooks to all students primary and secondary education to be developed by mid-1998		Yes/No	<ul style="list-style-type: none"> The strategy for primary education has been formulated and is currently being implemented. The studies to begin Secondary Educational Reform will begin in 1999. Authorities determined that it was not appropriate to distribute the texts before the reform strategy was formulated.
	Establish national assessment system by end 1997, including an analysis and publication of the results of the baseline.		Yes	The system (SIMECAL) was published in February of 1998. A summary of achievements can be found in <i>Rendimientos Escolares de 3o y 6o de Educación Primaria en Lenguaje y Matemática y Factores Asociados</i> . It has probably been the most successful plan of educational reform. It has established a link between nutritional levels and achievement.
6. Improve access to early childhood education.	Establish a policy and institutional framework for early childhood development program		Yes (in progress)	The policies for early childhood development were approved through the Secretarial Resolution No. 285/97 and are included in the document <i>Políticas de Educación Inicial</i> . The institutional framework is in the process of being defined.
	Targets for number of children (age 6 and under) in early childhood development program.	Base 43,667 1997 50,000 1998 80,000	No	The targets were set in relation to children covered by the PAN program. However, a change in budget commitments has reduced the scope of the program. Preliminary information indicates that for 1997 the figure was 43,013 and 55,144 for 1998. The institutional framework for the PAN program was not properly defined. Authorities suggest that due to budgetary restrictions, the targets until the year 2000 should be revised.

Bolivia: Programmed Actions in Social Sector Under the HIPC Initiative

Policy Action	Verifiable Indicator	Quantitative Targets	Completed/In Progress	Observations
7. Adapt education reform to popular participation and decentralization.	Enact modifications to education reform regulations by mid-1998		No	The ministry of education will be adapting the educational reform with the recently approved law of Administrative Decentralization and Popular Participation. The ministry is drafting a proposal which will transfer the administration of basic education to municipal governments. A pilot program with 30 municipalities will begin in 1999.
B. Health				
1. Develop a national health strategy in the context of decentralization that improves sector financing.	Strategy to be developed by end 1997 and implementation initiated by mid 1998		Yes (late)	A final version of the national action plan was published (PES) in April 1998. It is consistent with the decentralization context; there are preliminary cost estimates; and implementation is expected to begin in the second half of 1998.
	Proposal presented for health system financing mechanism by mid 1998 and implementation by system initiated by end 1998		No (in progress)	This is being covered by the PES. In addition, World Bank and IDB projects under preparation address some of these issues.
	Proposal presented for new health care delivery system in all sized municipalities by mid-1998		No (in progress)	A proposal is being developed for a basic municipal health mechanism which is being implemented as a pilot in 11 municipalities.
2. Increase public expenditures on health.	Establish targets for public expenditure on health		No	Preliminary estimates show that spending as a percentage of GDP has fallen since 1996. The budgeted numbers as a percentage of GDP are: 1.36 percent in 1996 1.30 percent in 1997 1.36 percent in 1998
3. Improve access and coverage of maternal and child health care services.	Targets for share of births attended by trained staff	Percent of births attended by health professionals in the framework for the mother and childhood national insurance program (SNMN) Base 30 percent 1997 45 percent 1998 58 percent	Yes	<ul style="list-style-type: none"> • Authorities calculated that actual numbers for 1996 was 30 percent and for 1997 43.6 percent. Professional “parteras” were not included in the numerator of this indicator. • For all of the health quantitative indicators below, there is a fundamental problem because the ministry of health uses a different fertility rate from INE.

Bolivia: Programmed Actions in Social Sector Under the HIPC Initiative

Policy Action	Verifiable Indicator	Quantitative Targets	Completed/In Progress	Observations
4. Reduce incidence of endemic diseases, including Chagas and malaria.	Targets for pregnant women and endemic areas undergoing Chagas tests	Percent of pregnant women in endemic areas having Chagas tests within the framework of the SNMN Base 0 1997 13 percent 1998 40 percent	No	There has been no progress in this program because it was considered inconvenient to implement (the test is easy and inexpensive but the lab work has to be done in a city making it impractical). Authorities suggest eliminating this indicator in the future in light of the fact congenital transmission of Chagas is minor. Greater efforts in fumigation are recommended.
	Targets for number of houses improved/protected against Chagas in endemic areas	Share of houses receiving improvements against Chagas in endemic areas Base 8 percent 1997 14 percent 1998 25 percent	Yes	C In 1996, 41,600 houses were protected against Chagas resulting in a base of 8 percent. In 1997 the indicator reached 13.4 percent just short of the HIPC target. There were implementation problems due to decentralization of responsibilities to Prefecturas. C Regardless of whether target is met or not, it is worth noting that there is a 500,000 houses deficit. There is currently a capacity to fumigate 60,000 per year which means that at this rate the deficit will not be covered in less than 9 years.
	Targets for prevalence of malaria affected areas	Share of annual parasite index (IPA) in malaria areas (in thousands) Base NA 1997 35.2 1998 20.0	Yes	The targets in this indicator were probably pessimistic with the actual base much lower than the target for 1997 (lower number is improvement). The observed numbers are: 1996 20.7 1997 15.3
C. Rural and development and the fight against poverty				
1. Improve monitoring of expenditures and outcomes in social sectors and rural development.	Database and monitorable indicators for rural development and poverty alleviation to be developed by mid-1998		Yes (in progress)	INE and UDAPE are designing an integrated system (Sistema Integrado de Indicadores Sociales y Análisis de Políticas Sociales, SISAPS). It is and will continue to be work in progress.
	Effective system to be put in place at the central (end-1997) prefectura (end-1998) and municipal (end-1999) levels for monitoring of public social expenditures		Yes (in process)	At a national level, UDAPE is in charge of this work. At the end of 1997 UDAPE received additional resources to monitor public spending at a national level. The INE and the Ministry of Hacienda are in charge of monitoring public expenditures at the Prefectura and Municipal level (the system will be effective at the end of 1998).
	UDAPSO's role in monitoring social expenditures and poverty to be reviewed and strengthened by end 1997		Yes (in progress)	<ul style="list-style-type: none"> • UDAPE has taken the task originally assigned to UDAPSO. UDAPE has estimated poverty indicators at the municipal and urban level.
2. Establish a clear policy and strategy for social and rural development funds.	To be completed by March 1998 and new system introduced thereafter		Yes (in progress)	The Ministerio de la Presidencia has presented a proposal for a "Decreto Supremo" which creates the COPCOFIN (Consejo de Políticas de Cofinanciamiento). The proposal seeks to improve spending efficiency.

Bolivia: Programmed Actions in Social Sector Under the HIPC Initiative

Policy Action	Verifiable Indicator	Quantitative Targets	Completed/In Progress	Observations
3. Provide rural communities with basic services infrastructure.	Targets for number of beneficiaries of rural/peri-urban basic water and sanitation projects	Number of beneficiaries of rural and peri-urban basic water and sanitation projects Base 132,000 1997 132,000 1998 132,000	Yes	In 1997, new beneficiaries for sanitation reached 15,327 and 172,552 for drinking water summing a total of 187,879 which includes projects financed by the IDB. Authorities suggest disaggregating this indicator as shown above.
	Targets for investment in rural road improvements/rehabilitation	Base US\$32 million 1997 US\$32 million 1998 US\$42 million	Yes	These investments are included in the Programa de Inversión Pública en Caminos Vecinales. The sum for 1997 was US\$39.4. The central government and prefecturas invested US\$27.6 million while municipalities invested US\$11.8 million.
4. Strengthen the land tenure system, improve land distribution and improve agricultural research.	Targets for number of hectares subject to catastro and title regularization	Number of hectares subject to cadastre and titling regulations (in millions) Base 0.33 1997 1.6 1998 3.5	Yes	<ul style="list-style-type: none"> • The Land Administration Project of the World Bank, Danish and Dutch cooperation chose the most difficult rural areas. This program covered 3.7 million hectares. • The Spanish-sponsored CAT-SAM project, allows them to meet the target of 1.6 million hectares. The SAN-SIM Project will cover 0.23 million hectares and the TCO Project will cover 11.7 million hectares. In total the number of hectares reaches 13 million.
	Real Estate Registry Law to be presented to Congress by end-1998		Yes	The Ley del Registro Público de Derechos Reales was presented to Congress in April of 1998 and was approved by the Supreme Court.
	Competitive agricultural research and extension system to be developed by end-1997		No	The Ministry of Agriculture is reformulating the SINTA (Sistema de Innovación Tecnológica) which was prepared with aid from the World Bank. It will now be executed at a departmental level.
5. Establish a policy and framework for providing micro-credits and rural finance.	To be established by March 1998 and introduced thereafter	MH	Yes	The new financial framework has been established. FONDESIF will be in charge of implementing regulations. Under the <i>Ley de Propiedad y Crédito Popular</i> , adequate attention is given to micro credit.
