# Commodity Price Outlook \& Risks 

Research Department, Commodities Team ${ }^{1}$

May 21, 2014

## www.imf.org/commodities

## This monthly report presents a price outlook and risk assessment for selected commodities as depicted from

 futures and options markets.Outlook. Futures markets show most commodity prices declining or remaining flat over the next 12 months, with the exception of wheat, coffee and corn. Natural gas prices are expected to rise through the coming winter and decline thereafter, reflecting seasonal demand patterns. Other fuel price prospects are downward-trending owing to ample supplies, while gold futures prices remain flat. Copper prices are expected to decline slightly over the next year amid concerns of slowing Chinese demand. Wheat prices are expected to increase by about 7 percent by next May owing to supply concerns in the key growing areas, namely U.S., Canada, and Ukraine. Similarly, coffee prices are expected to rise by 7 percent over the next 12 months as adverse weather is expected to curtail supply in Brazil.

Risks. The likelihood of per-barrel prices for WTI falling below $\$ 90$ and Brent below $\$ 100$ in the next 12 months is about 37 percent and 39 percent, respectively, which is slightly lower than a month ago. The likelihood of WTI prices falling below $\$ 60$ has risen modestly since April, while the probability of WTI prices rising above $\$ 140$ remained unchanged, indicating little change in the overall WTI balance of risks. The distribution of Brent price risks narrowed marginally since last month.

The likelihood of per-MMBtu U.S. natural gas prices below \$3 (12 months forward) has dropped to 6.5 percent from 7.6 percent, while the probability of prices rising above $\$ 7$ dropped to 1.1 percent from 1.5 percent since April, reflecting seasonal patterns. Copper price tail risks ( 12 months forward) have eased on both ends of the price distribution, while the gold balance of risks widened slightly since last month. The widening of the gold price probability spread partly reflects the import-policy uncertainty following recent elections in India, a key consumer of the metal.

The likelihood of per-bushel wheat prices below $\$ 4$ declined to 0.7 percent from 1.2 percent while prices above $\$ 12$ slipped to 1 percent from 2.1 percent in April, reflecting reduced uncertainly about the U.S. winter-wheat harvest currently underway. The likelihood of corn prices below $\$ 3.50$ has increased to 8.5 percent from 7.6 percent, while the probability of prices above $\$ 7.50$ fell to 2.6 percent from 4.5 percent previously, reflecting a downward shift in the balance of risks as supply concerns abated.

#### Abstract

Contents. Fan charts (pages 2-3) show historical and forward futures prices (red line), with calculated confidence intervals of $+/-2$ standard deviations (in purple/blue). Confidence intervals are derived from prices of options on May 19, 2014. Likelihoods of spot prices rising/falling from specified price thresholds occurring at the 3-, 6-, 9- and 12-month forward (or closest available) horizons for each commodity are shown in tabular form (pages 4-5). In addition to price thresholds, the probability of each commodity spot price rising/falling by a certain percentage is shown (pages 6-7). Relevant contract specifications for each commodity are also shown (page 8).
