

Shadow Banking

Update on FSB work on strengthening the oversight of shadow banking

Robert Patalano / Cornelius Kuth 26 June 2014

Overview of the WS3 policy framework for other shadow banking entities

SCAVIAGV	Macro-mapping	 Annual Shadow Banking ("SB") monitoring macro-mapping Obtain overview of size and growth trends of non-bank financial sectors in FSB member jurisdictions.
Г		WS3 EF classification
	(1) Focus on (a) shadow banking 5 economic functions (EFs) and (b) related SB risks	 Identify non-bank financial entity types that national authorities judged to be involved in SB activities and their rationale. Highlight vulnerabilities through data sharing and SB risk metrics (e.g. leverage, maturity transformation).
y l		
WS3 Framework	(2) Address shadow banking risks through policy tools	 WS3 policy measures Describe jurisdictions' policy approach and toolkit to address SB risks posed by identified SB entities, and knowledge-sharing regarding policy effectiveness.
>		 FSB peer review and annual SB monitoring
	(3) Information-sharing process to identify gaps and best practices	 Take stock of the functioning of information-sharing process to identify any gaps in data/policy tools to address identified SB risks. Highlight best practices that could be recommended.

- FSB's SCAV/AGV's annual macromapping exercises provide the basis for WS3's mapping exercise.
 - Largely Flow of Funds based, capturing Other Financial Intermediaries ("OFIs") outside of banks, insurance and pension funds.
 - May be supplemented with other data (e.g. commercially available) on entities where appropriate.
 - Aims to assess global trends and risks in the shadow banking system.
 - Excludes entity types that do not engage in shadow banking (nonbank credit intermediation) or associated shadow banking risks.

20 jurisdictions¹; at end-2012 USD trillion 50 9.7 40 9.2 30 54.9 20 10 0 OFIs Self-securitisation Equity funds Prud consolidated (excl SFVs)

¹ 20 jurisdictions reported more granular data for narrowing down.

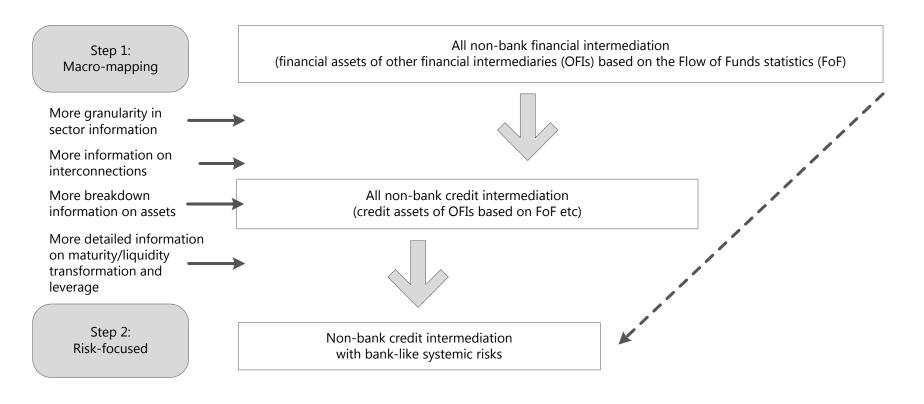

Sources: National flow of funds data; other national sources.

Narrowing down shadow banking

Measuring the shadow banking system

(1a) Categorization of SB entities into Economic Functions

• Rationale for Economic Function-based Approach:

 FSB developed an economic function based framework for classifying shadow banking entities, which allows authorities to <u>categorize by activities rather than legal forms (entities) to</u> <u>strengthen international consistency in assessing SB risks</u>.

Economic Function	Description of Risks	Example of Entities
EF1	management of <u>collective investment vehicles</u> with features that make <u>them susceptible to</u> <u>runs</u>	e.g. credit hedge funds, fixed income mutual funds
EF2	<u>loan provision</u> that is dependent on <u>short-term</u> <u>funding</u>	e.g. finance companies
EF3	<u>intermediation of market activities</u> that is dependent on <u>short-term funding or on secured</u> <u>funding</u> of client assets	e.g. broker-dealers
EF4	facilitation of credit creation	e.g. monolines (credit insurers), mortgage insurers
EF5	securitisation-based credit intermediation and funding of financial entities	e.g. ABCP, SIVs

Approach based on 5 Economic Functions (EF's):

(1b) Shadow banking risks: EF classification & risk measurement

Components	Key information items
(i) EF Classification	 Which entity types are judged to be involved in which EF? Description of non-bank financial entity types. Total assets outstanding for the past 2 years. Brief description of the rationale for classification.
(ii) SB Risk Metrics	 How significant are the SB risks posed by the identified entities? Weighted-average SB risk indicators for each identified entity types (or sample of firms (e.g. 3 largest)). Authorities may submit their own-defined indicators or qualitative descriptions if data is not readily available.
(iii) EF Checking Sheet (Exclusion from EFs)	 Why are some non-bank financial entity types not judged to be involved in one of the five EFs? For non-bank financial entity types captured in the SCAV/AGV macro-mapping data, a brief description of reasons for not classifying in EFs.

(2) Addressing shadow banking risks: Reporting policy measures

- Adoption of policy tools:
 - Authorities will adopt overarching principles (e.g. authorities should define and periodically update the regulatory perimeter) and apply policy tools from a menu of policy options for each economic function, or apply other policy tools as appropriate.
- Reporting through Policy Tool Templates:

Components (Worksheets)	Key information items
	 Which agency is responsible for the oversight of the financial entity type that is classified into the EF?
EF 1 - 5 policy tools	 Which policy tools has the authority adopted, either from the policy menu or other tools?
(Specific tools reported for each EF)	 Brief description of the tools, and how it addresses SB risks, including the URL links to the relevant documents.
	 Brief description of the challenges or shortcomings of the tool. Any future plans in relation to the tool.

(3) Information-Sharing to identify gaps & best practices

Information-Sharing

- The FSB WS3 developed a detailed procedure for informationsharing in March 2014 and has launched the 1st round information-sharing exercise from May through Autumn 2014.
- Authorities are now sharing information through the FSB on the categorization of entity types into the five economic functions, and will soon report policy tools.

Periodic Assessment of Gaps and Best Practices

- Once information on economic functions and policy tools have been collected, an assessment will be conducted to identify "gaps" in regulation and best practices in policy implementation to address SB systemic risks.
- Annual assessment of developments and jurisdictions' policy experiences will contribute to establishing best practices.
- In 2015, the FSB will be in a position to commence a peer review process of jurisdictions' implementation of the information-sharing framework.

In sum, <u>non-bank data collection and assessment is critical</u> to inform jurisdictions' policy actions to help mitigate SB systemic risks.

(1b) Shadow banking risks: Proposed Ratios in the Risk Metrics Template

Key information items* SB Risk Factors Credit assets / Total assets 1. Credit Intermediation Long-term assets to total assets ٠ 2. Maturity Transformation Short-term liabilities to total assets Liquid assets to total assets 3. Liquidity Transformation Short-term liabilities to total assets Off-balance sheet exposures outstanding divided by NAV ٠ Off-balance sheet exposures outstanding divided by gross assets • Funding from the parent company or its affiliates divided by liabilities 4. Credit Risk Transfer Credit insurance/guarantees divided by capital ٠ Securitisation exposures retained or purchased by the originator (or sponsor) divided by total securitisation Balance-sheet leverage (Assets to Capital) ٠ Off-balance sheet leverage (Off-balance sheet assets / capital) 5. Leverage Fund leverage (Total borrowing + NAV)/NAV ٠

*: Jurisdictions may use other information items if the listed items are not available.
