Sources: National Statistical Service, Central Bank of Armenia, and IMF staff calculations

1/ Since the first January 2013 average wages have been calculated based on the new "Income Tax" law, according to which they include social contribution formerly paid by employer. 2012 numbers have been recalculated according to new methodology. 2012 and 2011 numbers are not comparable.

2/ From December 2013 official numbers for Public sector wages include also the wages of military servants for years 2012 and 2013. 2012 and 2011 numbers are not comparable

3/2012 and 2013 indices are not comparable, because starting from Q1, 2014 methodology of calculation has changed. Currently CBA publishes only one index BCI instead of former BAI and BCI.

4/ CPI basket weights are updated annually since 2015

5/As a result of introduction of SNA 2008, data from 2015 is not comparable with the previous period

6/ From January, 2017 the coverage of gasoline and diesel prices in the main regions (marzes) of Armenia have been expanded. Now it includes also prices of high grade fuel (for gasoline it includes also prices of premium and super grade, for diesel it includes also prices of euro diesel). This has been reflected in the statistical increase of prices by 5-15 dram per liter.

Sources: Ministry of Finance, National Statistical Service, and IMF staff calculations

1/ Since 2008, fiscal data is based on the GFS 2001 classification and includes State Social Security Service. The 2007 data have been reclassified according to preliminary IMF estimates, to make them comparable with the 2008 data.

2/ This excludes PIU grants and expenditures financed by PIU grants through 2012. All the PIU loans are reflected in capital expenditures through 2012 (this relates only the monthly data), while from 2013 MOF revised the monthly data to reflect all the PIU's (loans and grants) distributed by current and capital expenditures. Therefore, monthly data on capital expenditures since 2013 is not comparable with the monthly data of previous years

3/ Excluded VAT refunds and included VAT part of presumptive payments on tobacco production. From 2015, VAT revenues include also VAT collected from tobacco products, which was shown separately before 2015

4/ Before the switch to GFS 2001 classification (see footnote 1), the overall balance was including net lending.

5/ Includes gas transaction of about 63.3 bln. AMD in December 2013

6/ From 2015 all ratios are calculated based on new SNA 2008 GDP
