

STATISTICAL APPENDIX

This statistical appendix presents data on financial developments in key financial centers and emerging markets. It is designed to complement the analysis in the text by providing additional data that describe key aspects of financial market developments. These data are derived from a number of sources external to the IMF, including banks, commercial data providers, and official sources, and are presented for information purposes only; the IMF does not, however, guarantee the accuracy of the data from external sources.

Presenting financial market data in one location and in a fixed set of tables and charts, in this and future issues of the GFSR, is intended to give the reader an overview of developments in global financial markets. Unless otherwise noted, the statistical appendix reflects information available up to March 2, 2004.

Mirroring the structure of the chapters of the report, the appendix presents data separately

for key financial centers and emerging market countries. Specifically, it is organized into three sections:

- Figures 1–14 and Tables 1–9 contain information on market developments in key financial centers. This includes data on global capital flows, and on markets for foreign exchange, bonds, equities, and derivatives, as well as sectoral balance sheet data for the United States, Japan, and Europe.
- Figures 15 and 16 and Tables 10–21 present information on financial developments in emerging markets, including data on equity, foreign exchange, and bond markets, as well as data on emerging market financing flows.
- Tables 22–28 report key financial soundness indicators for selected countries, including bank profitability, asset quality, and capital adequacy.

Note: Implied volatility is a measure of the equity price variability implied by the market prices of call options on equity futures. Historical volatility is calculated as a rolling 100-day annualized standard deviation of equity price changes. Volatilities are expressed in percent rate of change.

¹VIX is the Chicago Board Options Exchange volatility index. This index is calculated by taking a weighted average of implied volatility for the eight S&P 500 calls and puts.

¹All figures are adjusted for double-counting. Notional amounts outstanding have been adjusted by halving positions vis-à-vis other reporting dealers. Gross market values have been calculated as the sum of the total gross positive market value of contracts and the absolute value of the gross negative market value of contracts with non-reporting counterparties.

²Single-currency contracts only.

³Adjustments for double-counting are estimated.

⁴Gross market values after taking into account legally enforceable bilateral netting agreements.

Note: Data are from Morgan Stanley Capital International. The countries above include the 27 constituents of the Emerging Markets Free index as well as Hong Kong SAR and Singapore. Regional breakdowns conform to Morgan Stanley Capital International conventions. All indices reflect investible opportunities for global investors by taking into account restrictions on foreign ownership. The indices attempt to achieve an 85 percent representation of freely floating stocks.

Notes: (*) Based on net nonperforming loans; (**) 30-day NPL classification; (***) 60-day NPL classification; and (****) 180-day NPL classification.

¹Uncollectible credits only as a percentage of credits to the private sector.

²Private banks.

³Excluding suspended banks.

⁴Under the new methodology adopted in 2002, interbank loans are also included in total loans which results in a significant decline in the NPL ratio. Under the old methodology, the ratio remains at about one-third of all loans.

⁵The sudden increase in NPLs in 2003 reflects a revision in the official definition.

⁶Includes mortgage banks.

⁷Data for state-owned commercial banks only.

⁸U.S. Banks with assets greater than \$1 billion.

World Economic and Financial Surveys

This series (ISSN 0258-7440) contains biannual, annual, and periodic studies covering monetary and financial issues of importance to the global economy. The core elements of the series are the World Economic Outlook report, usually published in May and October, and the semiannual Global Financial Stability Report. Other studies assess international trade policy, private market and official financing for developing countries, exchange and payments systems, export credit policies, and issues discussed in the World Economic Outlook. Please consult the IMF Publications Catalog for a complete listing of currently available World Economic and Financial Surveys.

World Economic Outlook: A Survey by the Staff of the International Monetary Fund

The World Economic Outlook, published twice a year in English, French, Spanish, and Arabic, presents IMF staff economists' analyses of global economic developments during the near and medium term. Chapters give an overview of the world economy; consider issues affecting industrial countries, developing countries, and economies in transition to the market; and address topics of pressing current interest.

Exchange Arrangements and Foreign Exchange Markets: Developments and Issues

by a staff team led by Shogo Ishii

This study updates developments in exchange arrangements during 1998–2001. It also discusses the evolution of exchange rate regimes based on de facto policies since 1990, reviews foreign exchange market organization and regulations in a number of countries, and examines factors affecting exchange rate volatility.

Exchange Rate Arrangements and Currency Convertibility: Developments and Issues

by a staff team led by R. Barry Johnston

A principal force driving the growth in international trade and investment has been the liberalization of financial transactions, including the liberalization of trade and exchange controls. This study reviews the developments and issues in the exchange arrangements and currency convertibility of IMF members.

Global Financial Stability Report: Market Developments and Issues

The Global Financial Stability Report, published twice a year, examines trends and issues that influence world financial markets. It replaces two IMF publications—the annual International Capital Markets report and the electronic quarterly Emerging Market Financing report. The report is designed to deepen understanding of international capital flows and explores developments that could pose a risk to international financial market stability.
