Why Update the Standards?

- Tectonic shifts in the global economy
  - 2008 global financial crisis highlighted data shortcomings
  - Digitalization, financial innovation, globalization,
  - Increasing demand for data to address climate change

- The conceptual frameworks designed to be robust and resilient
  - But shortcomings in analytical usefulness exposed
  - Digitalization and globalization posed new challenges to data compilation

- Respond to data needs identified through global reviews
  - The G20 Data Gaps Initiative
  - The Stiglitz-Sen-Fitoussi Commission

Ensure that policymakers have access to data to help them achieve financial stability and economic growth objectives.
Updating Macroeconomic Statistical Standards

- Macroeconomic statistical standards are regularly updated to reflect changes in the economy.

- The “updates” can be categorized into three main groups:
  1. **Conceptual updates** (i.e., change in what is measured)
  2. **Methodological updates** (i.e., change in how activities are measured)
  3. **Presentational updates** (i.e., change in how the statistics are presented)

- In the past decades, more and more attention to arrive at consistency with other standards (e.g., GFSM and MFSM, SEEA)
Update Priority Areas

SNA priority areas
- Digitalization
- Wellbeing and Sustainability

Joint priority areas
- Globalization
- Financial Issues
- IPP
- Islamic Finance
- Informal Economy

BPM priority areas
- BOP
- Current Account
- Direct Investment

Key Update Themes
Digitalization and Financial Innovation

**Policy needs**

- Macrofinancial surveillance
- Fintech
- Digital money

**Selected Update Issues**

- Recording fintech
- Recording crypto assets
- Financial derivatives by type
- Non-bank financial institutions

**Global market capitalization of crypto assets**
(In USD billions)

Source: Coin Dance.
Globalization

Policy needs

- Trade
- International taxation
- Capital flows

Selected Update Issues

- Global value chains
- Multinational enterprises
- Special purpose entities (SPEs)

Global inward FDI position and SPEs
(In USD billion and percent of FDI)

External Sustainability

Policy needs

• External sector stability and interconnectedness

Selected Update Issues

• Net international reserves
• Trade classified by currency
• Stock/flow reconciliation
• Reinvested earnings (RIE)
• Unlisted equity

Estimated current account impact when including RIE on portfolio investment
(In percent of GDP; 5-year average)

Wellbeing and Sustainability

Policy needs

- Inequality and inclusive growth
- Climate change

Selected Update Issues

- Distributions of household income, consumption, saving, and wealth
- Unpaid household activities
- Environmental-economic accounting

Household disposable income
(Ratio, income of top 20 percent to income of bottom 20 percent of households)

Source: OECD.
Informal Economy

Policy needs

- Gender analysis
- Domestic revenue mobilization
- Inclusive growth

Selected Update Issues

- Develop an enhanced, consistent framework for measurement
- Incorporate unpaid household services

Informal economy by region
(In percent of GDP)

## Governance Arrangements—SNA and BPM

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Provides the mandate on national accounts, endorses and monitors the work program.</td>
<td>Carries out the mandate and reports progress on its work program to the UNSC. Membership comprises international agencies, including the IMF. Engages technical expert groups to carry out the work program.</td>
<td>Assists the ISWGNA in carrying out its work program. Resolves issues on the SNA research agenda. Membership represents global community of national accounts compilers in their personal capacity.</td>
<td>Advises the IMF on methodological and compilation issues in external sector statistics. Membership represents global community of external statistics compilers in their personal capacity.</td>
</tr>
</tbody>
</table>
Update Process and Cooperation between the BPM and SNA Drafting Teams

- **Research agenda: joint expert groups (Task Teams)**
  - Participation of GFS, MFS, SEEA, classification updates (ISIC, CPC), and users

- **Joint meetings of the AEG and the Committee**
  - Decisions taken together / key role of editors in the event of disagreements

- **Coordinated drafting of annotated outlines (new / substantially revised chapters)**
  - Including four joint SNA/BPM chapters
  - AOs circulated for global consultation

- **Common glossary and common text for general principles**
Coordination and Involvement of Stakeholders

BPM7 / 2025 SNA

- Holistic review of priorities
- BPM / SNA Task Teams
- Joint Task Teams
- Testing
- Global consultation of compilers and users
- SEEA, GFS, and MFS communities
Worldwide Participation in SNA/BPM Global Consultations

Thus far, 176 economies have participated in at least one of them
**Update Process and Timeline**

**UNSC:**
- Launch update process

**2020 - 2023**

**Identified common issues**

**BOPCOM:**
- Launch update process

**2020 - 2023**

**Guidance notes**
- Country consultations
- Recommendations drafted

**UNSC:**
- Adopt recommendations

**Draft 2025 SNA**
- Mar 2024
- 2024
- Oct 2024
- Mar 2025

**AEG and ISW GNA:**
- Approve 2025 SNA

**UNSC:**
- Adopt 2025 SNA

**UNSC:**
- Adopt recommendations

**Draft 2025 SNA**
- Mar 2025

**Draft BPM7**
- 2023
- 2023 - 2024
- Mar 2025

**AEG and ISW GNA:**
- Approve 2025 BPM7

**IMF Chief Statistician:**
- Approve BPM7

**SNA**
- 2020 - 2023

**BPM**
- 2020 - 2023

**BOPCOM:**
- Endorse annotated outline

**Recommendations drafted**
- 2023
- 2023 - 2024
- Mar 2025

**AEG and ISW GNA:**
- Approve 2025 BPM7

**IMF Chief Statistician:**
- Approve BPM7
Supporting implementation

- Implement multipronged strategy
  - Organize regional workshops
  - Provide technical assistance and training
  - Develop methodology handbooks and compilation guides
  - Coordinate among international organizations

- Utilize new digital platform for collaboration
  - Transition to electronic publications
  - Share common concepts across all statistical domains
  - Host a forum for interaction between compilers and users and peer-to-peer collaboration
  - Development of a compilers’ hub to facilitate sharing of best practices

Tailor implementation approach to user needs and materiality
Supporting implementation

Key ingredients to successful transition to updated standards

- Engage in global consultations
- Develop revision process
- Ensure sufficient resource allocation
- Engage with reporters
- Engage with users
- Share tools, best practices, resources.
Thank you very much for your attention!
More Information on the Update of the 2008 SNA
More Information on the Update of BPM6

Building Blocks: Flows, Stocks, Accounting Rules, Residence, Institutional Units, and Sectors

MARCH 6-7, 2024
IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
AGENDA

BPM7 Chapter 3/2025 SNA
Chapter 4. Flows, Stocks, and Accounting Rules

BPM7 Chapter 4/2025 SNA
Chapter 5. Residence, Institutional Units, and Sectors
Chapter Structure and Valuation

This chapter will follow the 2008 SNA chapter structure (i.e., Chapter 3: Accounting Principles)

- Valuation
  - Concessional lending—never record a transfer element in the “central framework”
  - Except for concessional loans provided by employers to employees

- Imports and exports of goods—no change to the current standard
  - Observed transaction value conceptually preferred
  - To be introduced in the next version of the manuals (subject to further testing)

- Stocks of debt securities at nominal value—supplement to the existing market valuation
Transactions and Time of Recording

- **Transactions**
  - Partitioning of assets/transactions
    - Two examples (use of a car by households for production, travel packages and tours)

- **Time of recording of redistributive transactions**
  - Not record fine/penalty transactions until the unit issuing the fine has an “unconditional claim to the funds”; and
  - If a judgment or ruling is subject to further appeal, an unconditional claim exists “when the appeal is resolved"
Economic Ownership

- Economic ownership of (non-renewable) natural resources, biological resources, and renewable energy resources will be clarified

- Economic ownership of Intellectual Property Products (IPPs)
  - Previously produced IPP depends on the underlying arrangement
  - Decision tree from the UNECE Guide to Measuring Global Production
  - Special purpose entities (SPEs)

- Clarification on provisions—financial asset related, nonfinancial asset related, and unrelated to asset ownership
Chapter Structure and Sectoring

- This chapter follows the 2008 SNA chapter structure (i.e., Chapter 4: Institutional units and sectors)
- Sectoring of fintech companies clarified
  - Classify them within the existing institutional sectors/subsectors—without introducing a new sector “Fintech”
  - Countries with significant fintech activities—may introduce an “of which” category
2025 SNA Sectoring

### Nonfinancial Corporations Sector

- **Non-financial corporations (S11)**
  - Domestically controlled (S11DO)
    - Public nonfinancial corporations (S11001)
      - Of which: Public nonfinancial corporations which are part of domestic multinationals (S110011)
    - National private nonfinancial corporations (S11002)
      - Of which: National private nonfinancial corporations which are part of domestic multinationals (S110021)
  - Foreign controlled (S11003)
    - Of which: SPEs

### Financial Corporations Sector

- **Financial corporations (S12)**
  - Domestically controlled (S12DO)
    - Public financial corporations (S12001)
      - Of which: Public financial corporations which are part of domestic multinationals (S120011)
    - National private financial corporations (S12002)
      - Of which: National private financial corporations which are part of domestic multinationals (S120021)
  - Foreign controlled (S12003)
    - Of which: SPEs

---

**Financial Corporations Sector**—updated breakdown

**Households Sector**—subsectoring according to levels of income and wealth; and other criteria
## BPM7 Sectoring

<tr>
<td>Households (HHs) and non-profit institutions serving households (NPISHs)</td>
</tr>
</tbody>
</table>
Special Purpose Entities (SPEs)

- The term SPEs should be used only for those entities with direct and indirect foreign control.

- Special purpose units of general government—general government sector
  - Non-resident are treated as separate units—introduce enhanced imputations to better reflect the fiscal operations of government controlled SPEs.

- Captive financial institutions wholly owned and controlled solely by resident parent entities—not considered SPEs.

- Resident-controlled affiliates should be referred according to their typology (conduits, captives, etc.)—not classified as an SPEs.
Units and Control

- **Head offices (HO) and holding companies (HC)**
  - Guidance for determining whether a HO/HC is a separate institutional unit
  - Distinguishing HC from HO

- **Ownership and control of corporations**
  - Criteria for classifying the corporations controlled by non-resident—treatment consistent with BPM
  - For example, corporation B is said to be subsidiary of corporation A if corporation A holds more than 50 percent of voting power in corporation B
THANK YOU FOR YOUR ATTENTION!
Globalization

MARCH 6 – 7, 2024

United Nations Economic Commission for Europe – IMF Statistics Department

SNA / BPM Joint Virtual Outreach Seminar
AGENDA

- Introduction
- Global Production
- Multinational Enterprise (MNE) Groups
- Measurement Challenges
- Supplementary Data
- Analytical Tools
Introduction

- **New thematic chapter**
  - Bring together information that cuts across different chapters.

- **What is globalization?**
  - Refers to the economic integration of economies around the world.
  - Producers achieve efficiencies by outsourcing parts of the production process (fragmentation).

- **The challenge**
  - Traditional macroeconomic statistics are based on the concepts of residence and economic presence.

- **The solution**
  - Supplementary presentations to provide alternative views or additional details that complement traditional macroeconomic statistics.
Global Production

- Global value chains (GVCs)
  - Fragmentation of production in production chains between resident and nonresident firms.
  - GVCs are a fundamental pillar of the modern global economy, enabling companies to take advantage of global specialization and cost efficiencies.

- Manufacturing and distribution arrangements
  - The chapter describes four main types of arrangements and their recording
    - Re-exports
    - Merchanting
    - Processing
    - Factoryless goods production
Global Production

- **Re-exports**
  - *Goods produced in other economies, and previously imported, that are exported with no substantial transformation from the state in which they were previously imported.*
  - Less connection to domestic economy compared to other exports
    - Show as supplementary item when significant

- **Merchanting**
  - *The purchase of goods by a resident (of the compiling economy) from a nonresident combined with the subsequent resale of the same goods to another nonresident without the goods being physically moved in and out of the compiling economy.*
  - Recording imports and exports of goods would inflate trade data
    - Record net export of goods under merchanting
Global Production

- Processing
  - Under a processing arrangement, the principal owns or acquires material inputs and purchases manufacturing services on physical inputs owned by others from a nonresident processor (who may provide some material inputs), to substantially change the goods. The ownership of the goods does not change during the manufacturing process.
  - **Key aspect**: Processor does not take ownership of the goods during the processing
  - Record transactions in goods and services
    - Merchandise transactions between the principal in a processing arrangement and other parties may be shown as a supplementary sub-item of general merchandise.
Global Production

- **Factoryless goods production**
  - *When a principal controls the production of a good by undertaking the entrepreneurial steps and providing the technical specifications required to produce the good, but fully outsources the material transformation process required to produce the output.*
  - **Key aspect**: Contractor takes ownership of the material inputs.
  - Record transactions in goods
    - Merchandise transactions between the principal in a processing arrangement and other parties may be shown as a supplementary sub-item of general merchandise.
Multinational Enterprise (MNE) Groups

- MNE definition
- The Role of Special Purpose Entities (SPEs)
  - Access to capital markets, isolate owners from financial risk, reduce regulatory and tax burden, and/or safeguard confidentiality.
  - Typology that can be used to identify SPEs and determine their appropriate institutional sector.
- Intellectual Property Products (IPPs)
  - Intangible nature makes the transfer and use of IPPs difficult to observe, particularly within MNE groups.
  - Decision tree to assist in determining economic ownership of IPPs and IPP related transactions.
Measurement Challenges

- **Allocation of production to different economies**
  - MNEs often operate seamlessly across borders.
  - Distorted transfer pricing.

- **Cross-border mobility of corporate assets**
  - IIPs and other intangible assets can easily be moved.
  - IPPs can have huge impact on macroeconomic indicators such as GDP.

- **Consistency and coherence of MNE data**
  - Ensure that all activity of an MNE group is captured, not duplicated, and properly allocated by economic territory.
  - Pay special attention to large entities.
Measurement Challenges

- Production fragmentation and gross trade flows
  - Inflated gross trade flows can occur.
Supplementary Data

- **Key indicators other than GDP**
  - For instance, GNI or NNI

- **Statistics on the Activities of Multinational Enterprises (AMNE)**
  - For instance, sales, employment, value added, exports and imports of goods and services, and number of enterprises.

- **Supplementary direct investment statistics**
  - Ultimate investing economy
  - Ultimate host economy
Supplementary Data

- **Additional granularity in the institutional sector accounts**
  - Breakdown of (non)financial corporations by domestic/foreign control
  - Foreign control: “Of which” SPEs category
  - Domestic control: Public vs private, with “of which” MNEs category

- **Trade and investment income by enterprise characteristics**
  - Disaggregate exports and imports of goods and services and external flows of investment income by:
    - Ownership
    - Size-class of enterprises
    - Partner economy
    - Product
    - Industry
Analytical Tools

- **Trade in Value Added Indicators (TiVA)**
  - Addresses the double counting implicit in gross flows of trade.
  - Measures the value that is added by each economy and industry.

- **Global value chain thematic account**
  - Uses a bottom-up approach that looks at a specific production chain within the framework of national accounts.
  - Consists of GVC-specific supply and use tables, either national or multi-country.

- **Extended supply and use tables (eSUTs)**
  - Designed to provide more granularity regarding transactions associated with globalized production processes, e.g., origin (imports) or destination (exports)
THANK YOU FOR YOUR ATTENTION!
Additional Slide
Global Production: Decision Tree

Were the goods produced outside the economy of the principal?

Yes

Did the principal supply most or all the goods as material inputs to the production and did the principal retain ownership of the goods during the entire transformation process?

No

Merchandise trade

Yes

Did the principal supply significant intellectual property to the production of the good, without charging for the right of use?

No

Did the goods cross the border of the principal?

No

Yes

Merchanting

Global manufacturing, Factoryless goods production

Global manufacturing, Processing

Merchandise trade, Re-exports
Digitalization

MARCH 6-7, 2024
IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
Lecture Outline

✓ Motivation

✓ Content of the 2025 SNA Chapter 22/BPM7 Chapter 16
Digitalization

✓ A. Digital Products
✓ B. Digital Platforms
✓ C. Digitalization and the Financial system
✓ D. Measuring Prices and Volumes of Products affected by Digitalization
✓ E. Analytical Tools to Increase the Visibility of Digitalization
Motivation

This Chapter is a new addition resulting from the update process of the SNA and BPM Manuals.

• Give visibility of the impact of digitalization on production, consumption, investment, trade, process, finance, communication, and other aspects of the economy and relevant cross-border transactions.

• Provide guidelines to measure digital products in accordance with the broad conceptual framework of the SNA/BPM.

• Explain the measurement of products and assets that have emerged as part of digitalization and provide a consolidated view of measuring and reporting on key aspects of digitalization.
Content of Chapter 22. Digitalization

A. Digital Goods and Services
   1. Cloud computing
   2. Data assets
   3. Artificial intelligence
   4. Nonfungible tokens

B. Digital platforms
   1. Nonfinancial digital intermediary platforms (DIPs)
   2. Free digital platforms and free digital products
      • Free products supplied by non-platforms firms
      • Free Digital Platforms
      • User-generated content
      • Free Software
      • Increasing visibility of Free Digital Platforms and Products

C. Digitalization and the Financial System
   1. New Financial Services and Means of Payment Enabled by Digitalization
   2. Financial Digital Intermediation Platforms
   3. Digital Assets, including Fungible Crypto Assets

D. Measuring Prices and Volumes of Products affected by Digitalization
   • Measuring quality change in ICT goods and goods with ICT components
   • Software and data
   • Cloud computing
   • Internet and telecommunications services
   • E-commerce and digital intermediation platforms
   • Expanded access to variety and customization
   • Free digital products

E. Analytical Tools to Increase the Visibility of Digitalization
   1. Thematic Account on the Digital Economy
   2. Digital Supply and Use Tables
   3. Extended Account to Increase the Visibility of the Free Services of Digital Platforms Consumed by Households
A. Digital Products (1)

Computing, data storage, software, and related IT services accessed remotely over a network, supplied on demand and with measured resource usage.

1. Infrastructure-as-a-service (IaaS) - access to hardware
2. Platform-as-a-service (PaaS) - access to a software platform
3. Software-as-a-service (SaaS) - access to the application software

Business process as a service (BPaaS) - specialized software used to automate common business functions or tasks

Data has become an important type of produced intangible asset.

Data as an asset means information content produced by accessing and observing phenomena and recording, organizing and storing information elements. These assets are produced when information on observable phenomena (OP) such as facts, behaviors, and characteristics are recorded, organized, and stored in digital format.

Data that is expected to be used in production for more than one year is conceptually a fixed asset (IPP).
A. Digital Products (1)

AI means capabilities of a computer program, or system controlled by a computer program, of recognition, reasoning, communication, and prediction that emulate human recognition, reasoning, and communication. AI programs may also be capable of learning.

AI systems are distinguished as a special type of software within a class of intellectual property product identified as “Computer Software, including Artificial Intelligence Systems”, with the separate reporting of AI encouraged as an “of which” item.

Digital records hosted on a blockchain that are associated with a digital or physical asset or product but that are distinct from that asset or product. NFTs certify ownership of rights to use and benefit from the asset and may also serve to certify the asset’s authenticity.

(1) NFTs that convey no ownership rights → (SNA Consumption) ; (BOP-computer and information services)
(2) NFTs that convey limited ownership rights → Non-produced, nonfinancial assets: contracts, leases and licenses
(3) NFTs that convey full ownership rights → purchase of the underlying asset (digital or physical).

>>> For the BOP: digital--(goods or computer services)
B. Digital Platforms

- Operators of digital platforms are service providers that facilitate interactions via the internet between two or more distinct but interdependent sets of users (either firms or individuals).
- Digitally-enabled services of matching producers with consumers or funders with borrowers are known as digital intermediation.

There are three types of digital platforms:

a) Nonfinancial digital intermediation platforms (DIPs) facilitate transactions between buyers and sellers for the ordering and delivery of goods and services for a fee or commission, without taking ownership of the goods or rendering the services that are intermediated.

b) Free digital platforms facilitate non-commercial interactions between users or provide entertainment and information services and are usually funded by advertising and the collection of data on their users.

c) Financial digital intermediation platforms mediate funding or payment transactions. Financial DIPs are discussed below in the section on digitalization and the financial system.
Nonfinancial DIPs (2)

- The output of the DIP consists only of the digital intermediation services, which are recompensed through a fee or commission.
- A rerouting is needed to include a direct sale of the output of the producers using the platform to the buyers using the platform and a purchase by those producers of intermediation services supplied by the platform.
Digital Trade

• International trade in goods and services includes digital trade.

• Digital trade comprises *all international trade that is digitally ordered and/or digitally delivered*.

• Digitally ordered trade is aligned with the *2009 OECD definition of e-commerce* but focusing only on international transactions in goods and services.

• Both goods and services can be digitally ordered whereas only services can be digitally delivered.

• Digital trade is often facilitated by a digital intermediation platform (online marketplace) that charges a fee for the intermediation service.
Free digital platforms and free digital products

- Digitalization has been marked by the emergence of free digital platforms as part of daily life and a general expansion in the availability of free digital products.

- The SNA framework values the free outputs of nonmarket producers such as nonprofit institutions funded by donations by the cost of production. However, this approach does not apply to free digital products in general because many are supplied by a commercial enterprise.

- The outputs of commercial enterprises are valued by their price, which is zero in the case of a free product.

- Free products supplied by market producers are included in GDP as part of the price of other products they help sell or with which they are bundled either directly or indirectly.

- Taken together, the items in the bundle generate at least enough revenue to cover the operating costs of the supplier of the free product, so the overall output of the supplier of the free digital product is not undermeasured.

- Both platforms and non-platforms supply digital products.
Free digital platforms and free digital products (1)

Free products supplied by non-platforms firms

Suppliers of digital products frequently adopt a “freemium” pricing strategy, in which a free basic version of the product promotes sales of upgrades or a premium version of the product.

The price of the promoted output, includes a mark-up that covers the cost of supplying the free output that has facilitated its sale.

Free Digital Platforms

Some digital platforms (such as public wikis created and maintained by volunteers) are owned by NPISHs and operate as non-market producers (social media, search, and access to content providing entertainment and information).

Most free platforms are commercial enterprises funded by advertising and monetizing user data. Multi-sided commercial platforms often charge a price for their services to the users on one side of the platform and supply free services to the users on the other side of the platform, to attract and retain these users.
Free digital platforms and free digital products (2)

- Free software products are often used by households for final consumption, or in production. Copies of free software are frequently supplied across borders.

- App stores are a type of DIP where the service that is intermediated is often free. Free and subsidized apps used by households may be funded by advertising, data monetization, or other services whose use they facilitate. The services of apps funded by advertising are purchased indirectly as part of the price of the advertised product.

- Open-source software developed by corporations is usually funded through sale of complementary services, such as training and support, or by other products it helps sell.

- Free software developed by individuals working independently (unpaid production) is outside the SNA production boundary.

Increasing visibility of Free Digital Platforms and Products

Alternative measures of household final consumption expenditures and the output of free digital platforms may be presented in an extended account on free digital platforms.
Users of free platforms frequently create user-generated content such as videos, articles, photos, etc. both for leisure activity and commercial purposes.

Creating content for leisure is outside the SNA production boundary. Unless the creator receives remuneration, user-generated content is assumed to have been created for leisure purposes.

Households that receive monetary remuneration for their uploaded content can be considered unincorporated household enterprises supplying services. If the purchaser is a non-resident, these services should be included in exports of services.
**Digitalization in the Financial system**

**New Financial Services and Means of Payment Enabled by Digitalization.**

The new digital financial services fall within existing categories of products, and the new digital payment mechanisms fall within existing asset categories.

- Financial digital intermediation platforms,
- Crypto currency exchanges,
- Digital providers of insurance services (InsurTech),
- Digital banking platforms operating solely online (neobanks),
- E-money issuers, and
- Online only foreign exchange bureaus and money transfer operators.

**Financial Digital Intermediation Platforms**

Provide matching services and facilitate financial transactions between suppliers of funds and users of funds.

They receive fees or commissions for their services and are classified as financial auxiliaries (S126).

**Digital Assets, including Fungible Crypto Assets**

Digital assets are digital representations of value recorded on a cryptographically secured distributed ledger or using a similar technology.

Include crypto assets and CBDCs, which may be designed as crypto assets, but which do not necessarily use crypto asset technology.

Crypto assets are digital representations of value that use cryptography and distributed ledger technology (DLT) such as blockchains to enable parties to transact directly with each other without the need for a trusted intermediary.

Crypto assets with a corresponding liability = Financial assets

Crypto assets without corresponding liability = Nonproduced nonfinancial assets.
C. Decision tree to classify digital assets

Note: Nonfungible crypto assets are not covered in this decision tree.
D. Measuring Prices and Volumes of Products affected by Digitalization

• Many measurement challenges arising from digitalization involve prices and volumes rather than the output at current prices.

• Price and volume measurement challenges are particularly common for products affected by digitalization because price change is straightforward to measure only when the products and their characteristics remain static.

• To capture the price and volume impact of quality changes in digital products, the prices of new models must be adjusted for the value of their quality difference from the models they replace.

• The commonly used “matched models” should be adjusted by introducing models of products benefiting from advances in digital technology that often offer substantially improved quality at about the same price as the model they replaced.

• Hedonic regression models relating the price to the product’s characteristics are a recommended method for adjusting prices for quality change.

• Another technique used to adjust the price of a digital good for a quality change is options pricing, which averages observations on the differences in the price of the item caused by a characteristic offered as an option.
D. Measuring Prices and Volumes of Products affected by Digitalization

Measuring quality change in ICT goods and goods with ICT components
Hedonic regression methods or the option price method.
Cost of production of a new product feature may be used to adjust the product’s price index for the quality change.

Software and data
[Deflator for investment in IT products or price index of a related product, such as standardized software products sold by software publishers]

Cloud computing
[A sample of stable, representative products from each product class (IaaS, PaaS and SaaS) to estimate a deflator for cloud computing output.]
Physical indicators of the volume of services produced may be combined using weights based on revenue shares to construct a volume index.

Internet and telecommunications services
[Samples of contracts, products and carriers must be kept up to date and prices must be adjusted for quality changes. Volume indexes constructed from physical indicators such as data usage to capture the volume growth of consumption and production of internet and telecommunications services]

E-commerce and digital intermediation platforms
[Deflators for household final consumption expenditures on items sold online must adequately represent prices from e-commerce outlets and suppliers, and from suppliers selling on digital platforms.]
The high frequency of changes in online prices will often make a monthly unit value a more suitable measure of the price from an online supplier.
E. Analytical Tools to Increase the Visibility of Digitalization

The main purpose of the thematic account and the accompanying Digital SUTs is to increase the visibility of activities, products and transactions affected by digitalization that are subsumed in broader aggregates in the standard classifications of the national accounts.

A thematic account can communicate the key information from the digital SUTs in a convenient and effective format. In this account the items that are most important for understanding the structure of the domestic economy and its uses of digital products should be prioritized.

Digital SUTs analyze the impact of digitalization on the economy along three dimensions: type of transaction, type of product, and type industry.

The Digital SUTs start with the conventional SUTs and add rows on digital transactions and products and columns on new digital industries.

Extended accounts are a flexible tool for presenting concepts that extend SNA boundaries, including expanded measures of economic activity and household final consumption expenditures that extend the production boundary.

Households’ consumption of the free services of advertiser-funded digital platforms can be included in an extended account as part of expanded measures of household final consumption expenditures and output.
Thank you!
Communicating and Disseminating Economic Statistics

MARCH 6 -7, 2024

United Nations Economic Commission for Europe – IMF Statistics Department
SNA / BPM Joint Virtual Outreach Seminar
Introduction

- New Thematic Chapter included in the updated SNA and BPM.

- Highlights the role of dissemination and communication as key components of the production chain of official statistics.

- Presents broad-based innovative strategies to help producers of macroeconomic statistics communicate the statistics to their users.
Guidance to statistical producers on production and dissemination of published data and accompanying documentation:

- **Production of Statistical Publication**
  - Clear, understandable, headline message
  - Clearly described, non-technical statistical messages
  - Accompanying methodological documents describing sources & methods

- **Communication & Dissemination**
  - Policy-driven communication
  - Transparent dissemination
  - Multi-channel dissemination and wide user access
Communication with Suppliers

This section provides guidance to statistical producers on communication with data suppliers.

Official statistics producers need to communicate effectively with data suppliers to effectively to produce macroeconomic statistics. This includes:

- Use of language that suppliers can readily understand
- Use of appropriate definitions in line with the standards – which can be adjusted to meet the relevant situations.
**Statistical Confidentiality**

- By law, most official statistics producers collect data from businesses and households for statistical purposes only and often under some legislation.

- These cannot be disseminated, sold, or otherwise published in a way that allows identification of the business or household.

- Appropriate data confidentiality policies, anonymization techniques and disclosure checking procedures should always be part of the process before publication of any data.

- The goal of confidentiality policies should be to maximize the dissemination of information as a public good for the wide range of users while still ensuring confidentiality obligations are met.
A Framework for Measuring Alignment with the Economic Accounting Statistical Standards

- A key feature of the **2025 SNA** and the **BPM7** is their ability to facilitate cross-country comparisons.

- The alignment framework provides a tool that:
  - Statistical producers can use to self-assess their macroeconomic statistics.
  - Users can assess whether countries are on the same basis and have implemented these standards consistently.

- The results are readily available in an easily digestible format.

- The framework is structured around the key building blocks:
  - Concepts
  - Accounting Rules
  - Methods
  - Classifications
An Extract from the SNA alignment Framework

</tr>
</tbody>
</table>
**Taxonomies and Metadata**

Provides guidance to statistics producers on effectively communicating statistical products with explicit reference to documentation on quality and methodology:

- **Quality**
- **Timeliness**
- **Frequency**
- **Reference Period**

Producers should also provide information about the substance of the release and sources of revisions:

**Example:** Assume that on average the first, second and third vintages of quarterly GDP are published 30, 60 and 90 days after the reference period, respectively. Assume further, that the estimates are based on incomplete source data (such that each vintage is a result of a regular revision).

<table>
<thead>
<tr>
<th>Substance (Type of Revisions)</th>
<th>Timeliness</th>
<th>Frequency</th>
<th>Reference Period</th>
<th>Update Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular</td>
<td>30-day</td>
<td>Quarterly</td>
<td>First quarter, 2021</td>
<td></td>
</tr>
<tr>
<td>Regular</td>
<td>60-day</td>
<td>Quarterly</td>
<td>First quarter, 2021</td>
<td>2021.Q1</td>
</tr>
<tr>
<td>Regular</td>
<td>90-day</td>
<td>Quarterly</td>
<td>First quarter, 2021</td>
<td>2021.Q1</td>
</tr>
</tbody>
</table>

These vintages should be communicated as:

- Regular – 30-day - Quarterly National Accounts release, first quarter 2021
- Regular – 60-day - Quarterly National Accounts release, first quarter 2021 (2021.1Q revised)
- Regular – 90-day - Quarterly National Accounts release, first quarter 2021 (2021.1Q revised)
Prominence of Net Measures Compared to Gross Measures

- Encourages the focus on net measures (e.g. GNI) as a better measure of economic welfare.

- Examines challenges of net measurement; and support the need for higher quality and reliable net estimates and recommends steps on the way forward.

- Provides guidance on:
  - Improving the estimation of consumption of fixed capital and measures of natural resource depletion (additional guidance being developed on ).
  - Expanding accessibility and practical guidance on capital measurement to a wider range of countries.
Use of Easier to Understand Terminology for Users

This section proposes a limited number of examples of user-friendly terms that could be considered by producers when engaging with users, particularly, non-technical users.

Objectives:

- Ensure harmonized definitions across the economic accounting statistical standards primarily for producers.
- User friendly terms for communicating with users.
- User friendly explanation of terms

Common Glossary

- A common glossary is important as it ensures further harmonization across international statistical standards and provides users with a clear and consistent understanding of key economic terms and definitions.
- The ambition is to publish the final Common Glossary as a separate electronic publication.
THANK YOU FOR YOUR ATTENTION!
BPM7: Main Features and Outline

MARCH 6-7, 2024

IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
**BPM7 Main Features**

- Follows the **standard revision cycle** (~15 years between editions)
- First BPM update to be done in **full coordination with the SNA update**
- Increased **collaboration with other statistical domains**, including common glossary
- Extensive outreach and **global consultations**
- **Early implementation simulations** to test some proposals before agreeing them
- Guidance on the statistical treatment of **emerging phenomena**, e.g., related to globalization and digitalization
- **Anticipating future developments**, e.g., the use of invoice values for goods and reinvestment of earnings for portfolio investment in *BPM8*
- The **integrated framework** will be at the center of the *Manual*
- Other changes to address new developments, e.g., related to globalization and digitalization, will be handled **mostly through supplementary presentations**.
Chapters in *BPM7* (I)

- Chapter 1. Introduction
- Chapter 2. Overview of the Integrated Framework
- Chapter 3. Flows, Stocks, and Accounting Rules (*joint BPM/SNA chapter*)
- Chapter 4. Residence, Institutional Units, and Sectors (*joint BPM/SNA chapter*)
- Chapter 5. Classifications of Financial Assets and Liabilities
- Chapter 6. Functional Categories in International Accounts
- Chapter 7. Balance Sheet: The International Investment Position
- Chapter 8. Financial Account
- Chapter 9. Other Changes in Financial Assets and Liabilities Account
- Chapter 10. Goods Account (*separated from services in BPM7*)
Chapters in *BPM7* (II)

- Chapter 11. Services Account *(separated from goods in BPM7)*
- Chapter 12. Earned Income Account *(instead of primary income account)*
- Chapter 13. Transfer Income Account *(instead of secondary income account)*
- Chapter 14. Capital Account
- Chapter 15. Globalization *(new joint BPM/SNA chapter)*
- Chapter 16. Digitalization *(new joint BPM/SNA chapter)*
- Chapter 17. Islamic Finance *(new joint BPM/SNA chapter)*
- Chapter 18. Informal Activities *(new joint BPM/SNA chapter)*
- Chapter 19. Selected Issues in BOP/IIP Analysis
- Chapter 20. Communicating the Accounts *(new joint BPM/SNA chapter)*
Annexes in *BPM7 (I)*

- Annex 1. Exceptional Financing Transactions
- Annex 2. Debt Reorganization and Related Transactions
- Annex 3. Regional Arrangements
- Annex 4. Remittances
- Annex 5. Selected Issues on Cross-Border Trade *(new annex)*
- Annex 6. Selected Issues on Direct Investment *(significantly expanded)*
- Annex 7. Selected Financial Issues *(new annex on financial derivatives and reverse transactions)*
Annexes in *BPM7* (II)

- Annex 8. Insurance and Pensions
- Annex 9. Positions and Transactions with the IMF *(now separate annex)*
- Annex 10. Sustainable Finance in External Sector Statistics *(new annex)*
- Annex 11. Data by Partner Economy *(new annex)*
- Annex 12. Links between International Standards for Macroeconomic Statistics *(expanded to include linkages beyond the national accounts)*
- Annex 13. Changes from *BPM6*
- Annex 14. Standard Components and Selected Other Items
THANK YOU FOR YOUR ATTENTION!
Cross-cutting themes

MARCH 6-7, 2024
IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
Agenda

• Introduction
• Integrated Framework
• Sector breakdowns
• partner economy
• Special Purpose Entities (SPEs)
• Other cross-cutting issues
• Supplementary items
**Introduction**

- **BPM7** provides flexibility for compilers to provide further information on selected topics for analytic value.

- Some recommendations are extensions from BPM6 within the core framework; some extend beyond the core framework.

- Guidance on various topics are presented in new chapters and annexes (such as on the informal economy and partner economy attribution) as well as references with the text to supplementary items.

- **BPM7** encourages compilers to use this guidance to fill important information gaps.

- Compilers would choose topics based on their importance within the economy’s structure, key policy issues, and data availability.
***Introduction

- **Standard Items**
  - **Standard components** are items that are fully part of the framework and contribute to the totals and balancing items.
  - **Memorandum items** are part of the standard presentation but are not used in deriving totals and balancing items (example: Interest before FISIM or implicit financial services)

- **Supplementary Items**
  - Items outside the standard presentation that are compiled depending on circumstances in the particular economy (example: Total remittances and transfers to NIPISHs).

  
  \[\text{BPM7 will mostly introduce new supplementary items.}\]

New standard items are **highlighted in blue** throughout this presentation. Items that are not highlighted are new supplementary items.
**Integrated Framework**

- **The Integrated IIP framework** is an important new standard presentation integrating the IIP with the balance of payments.
- The integrated IIP shows how the IIP positions at the start of the period plus balance of payments transactions plus revaluations and other changes sum to the closing positions in the period.

---

### Integrated International Investment Position Statement

<table>
<thead>
<tr>
<th>Beginning of period IIP</th>
<th>Accumulation accounts</th>
<th>Other changes in volume</th>
<th>End of period IIP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transactions from BOP financial account</td>
<td>Revaluations</td>
<td>Total</td>
<td>Total</td>
</tr>
<tr>
<td>Total</td>
<td>Due to exchange rate changes</td>
<td>Due to other price changes</td>
<td>Of which: Cancellation and write-offs of debt</td>
</tr>
</tbody>
</table>

---

All standard components (except the two “of which” classifications under *other changes in volume*)
***New sector breakdowns in the standard components, supplementary items

- Split nonfinancial corporations, households, and nonprofit institutions serving households into: (two separate standard components)
  - Nonfinancial corporations
  - Households and nonprofit institutions serving households
- Breakdown of other financial corporations into:
  - Money market funds (MMFs)
  - Non-MMF investment funds
  - Insurance corporations
  - Pension funds
  - Other financial intermediaries
    - Of which central clearing counterparties
  - Captive financial institutions and money lenders, and financial auxiliaries
Sectoral breakdown for DI

- BPM7 de-emphasizes the breakdown by investment relationship (direct investor in direct investment enterprise; direct investment enterprises in direct investor (reverse investment); and between fellow enterprises) in favor of sectoral breakdown
- Aligns DI with other functional categories
- Applies to financial account transactions and IIP

Direct investment **standard components**

**Equity and investment fund shares**

*By residential sector*

- Central Bank
- Deposit-taking corporations, except the central bank
- General government
- Other sectors
  - Other financial corporations
  - Nonfinancial corporations
  - Households and NPISHs

**Direct investment memorandum and supplementary items**

- Direct investment
  - (m.) Direct investor in direct investment enterprises
  - (m.) Direct investment enterprises in direct investor (reverse investment)
  - (m.) Between fellow enterprises
  - (s.) if ultimate controlling parent is resident
  - (s.) if ultimate controlling parent is nonresident
  - (s.) if ultimate controlling parent is unknown
Data by partner economy I

- BPM7 will encourage compilers to enhance analytical value by publishing data by partner economy for specific balance of payments components:
  - Goods (with reference as before other sources such as IMTS)
  - Services
  - Direct investment
  - Remittances –
    - closely related to migration between two economies, and
    - may often require estimations

- Supplementary data on DI based on the ultimate investing economy (UIE) and the ultimate host economy (UHE) as well as identification of pass-through funds
Data by partner economy II

- BPM7 will elaborate on some cases where data by partner economy may be challenging such as:
  - Goods on consignment and economy of origin
  - Merchanting and other Global manufacturing arrangements where the physical movement of the goods differs from the change of ownership
  - Adjustments to bring source data that exhibits physical cross border flow of goods to a change of economic ownership basis may also require adjustments to the partner economy
  - Intermediation services and contracting
  - Securities
    - transactor v debtor for assets held
    - Securities under reverse transactions (legal versus economic owner)
Other cross cutting issues

Fintech

- Introduce “of which” category for instruments or services classifications where necessary to separate out fintech-related instruments and services.
  - For example, the activities are classified as financial services or insurance services with a further “of which”

Crypto

- Record crypto assets without a counterpart liability designed to act as a general medium of exchange (e.g., Bitcoins) in a separate category in the capital account. (new standard component)
- Record crypto assets with a counterpart liability as a financial asset
  - The functional category would depend on the nature of the underlying claim
Special Purpose Entities (SPEs)

- A separate “of which” identification of SPEs within the institutional sector accounts

- Nationality-based SPE statistics (i.e., organized according to the location of the entity that ultimately controls the SPEs rather than by the residency of the SPEs)
  - Direct investment statistics that look through SPEs to the first operating unit as a first step in presenting data ultimate host economy

- IPP owned by SPEs - how they are treated
Supplementary presentation of trade and investment income

- Goods trade by enterprise characteristics (TEC)
- Services trade by enterprise characteristics (STEC)
- Investment income by enterprise characteristics

- Data linkage with business register
- These supplementary tables are recommended in the context of globalization. The characteristics recommended are
  - Industry
  - Ownership (domestic/foreign control)
  - Firm size
Supplementary presentation of trade

- **Currency Breakdowns**
  - Total Goods by the currency of denomination.
  - Total Services by the currency of denomination.
    - Domestic / foreign
    - Domestic and SDR basket
    - Domestic, SDR basket and other currencies
  - An unallocated item can also be included to address currency allocation difficulties
**New supplementary items I**

- **Sustainable Finance**
  - Geographical and industrial sector breakdowns of direct investment
  - Introduce a separate table for the ESG related ‘of which’ categories of the IIP and BOP as part of Annex 14 of the BPM7
  - International cooperation grants to low-income countries
  - Aligned with the work by the DGI-3 Recommendation 4 in terms of labelling, taxonomy, classification
  - Countries are encouraged to compile data as relevant

### Headlines

- In *BPM7*, there will be two chapters Ch 10 (The Goods Account) and Ch 11 (The Services Account) replacing a single chapter in *BPM6*
- Global manufacturing arrangements discussed in Chapter
- Emphasis on publishing Table 10.2, Reconciliation between merchandise trade source data and total goods on a balance of payments basis
- The new manual will follow the structure of *BPM6* 10.13 to 10.40
- Note: Crypto assets (CAWLM) no longer recommended to be classified in goods account

#### Table 10.1 Overview of the Goods Account

Overview of Chapter 10 - Goods Account

Sections with no significant change

- General merchandise
  - Items included
  - Items excluded
  - General and special trade
  - Time of recording
  - Valuation
  - Re-exports
- Other goods
  - Merchanting
  - Nonmonetary gold

New Sections

- Global manufacturing – Processing-type arrangements and factoryless goods production (FGP)
  - Adjustments to source data
  - Providing information to users
  - Valuation
  - Diagrams
  - Decision tree distinguishing (traditional) merchandise trade
  - Re-exports
  - Processing arrangement
  - FGP arrangement
Chapter 10 - General Merchandise

- Some new items under *inclusions*
  - Inverse merchanting
  - Trade of finished goods under an FGP arrangement (*new treatment*).

- FOB valuation for exports/imports will be maintained in *BPM7*.
  - It will be noted that the valuation of imports and exports at the observed transaction value is conceptually preferred and, subject to further testing, will be introduced as the standard in the next version of the manuals.
Chapter 10 - Global Manufacturing Arrangements - Factoryless Goods Production

A principal in country A outsources the manufacture of a product to a contractor but controls the design process and the final sale. This principal is a producer but does not have a factory:

The contractor in country C builds the product
- The contractor (in country C) sources the input materials e.g. from country B
- The contractor makes the product
- The principal provides the design specifications (the “knowhow” or IPP)
- Principal buys the finished product from contractor and sells to country D

### Table: BOP and IMTS Adjustments

</tr>
</tbody>
</table>
# Chapter 10 New emphasis on
Table 10.2. Reconciliation between Merchandise Source Data and Total Goods on a Balance of Payments Basis

<table>
<thead>
<tr>
<th>Valuation adjustments</th>
<th>Exports</th>
<th>Imports</th>
</tr>
</thead>
<tbody>
<tr>
<td>– CIF/FOB adjustment</td>
<td>n.a.</td>
<td></td>
</tr>
<tr>
<td>± High-value capital goods, if delivery differs from change of ownership</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## Adjustments arising from the change of economic ownership principle

- ± Goods lost or destroyed in transit
- ± Goods changing ownership in customs warehouses or other special zones
- - Migrants' personal effects
- - Returned goods
- - Goods for repair or storage without change of ownership

## Valuation adjustments and adjustments arising from the change of economic ownership within merchanting or global manufacturing arrangements

- + Net exports of goods under merchanting | n.a. |
- + Exports to and imports from a merchant in an economy of inverse merchanting
- - Dispatches of goods from, or arrivals of goods to, either the economy of the principal or the economy of the processor without change of ownership in a processing arrangement
- + Goods acquired from other economies for processing abroad, and goods sold abroad after processing, without the goods passing through the economy of the resident principal
- + Acquisition and sale to other economies of finished goods by a factoryless goods producer without the goods passing through the economy of the factoryless goods producer
- ± Adjustment to the contractor's valuation of exports of finished goods to a factoryless goods producer if different from IMTS valuation of dispatches to final buyer | n.a. |

## Other conceptual adjustments

- - Goods imported for construction projects by nonresident enterprises
- + Goods changing ownership entering / leaving territory illegally
- + Nonmonetary gold

= Total goods on a balance of payments basis

---

**Types of adjustments**

- Valuation adjustment
- Arising from change of ownership
  - of which, within a global manufacturing arrangement
- Other conceptual adjustments
Classification is mainly product based, but is transactor based for travel, construction, and government goods and services n.i.e.——no change from BPM6

Improves correspondence between BOP services classification and CPC

Marketing assets
- 1st/2nd level
- Treatment of licenses to use, license to reproduce and distribute and outright sale of marketing assets

</tbody>
</table>
Chapter 11 – Services, changes from BPM6

Telecommunication, computer, and information services (BPM6)

- 1.A.b.9 Telecommunications services
- 1.A.b.10 Computer, and information services
  - 1.A.b.10.1 Computer services
  - 1.A.b.10.2 Information services

- Computer and information services—to include cloud computing services and data and databases (incl. data as an asset)

Other business services (BPM6)

- 1.A.b.11 Research and development services
- 1.A.b.12 Professional and management consulting services
- 1.A.b.13 Trade-related services
- 1.A.b.14 Operating leasing services
- 1.A.b.15 Technical and other business services

Manufacturing services on physical inputs owned by others

- Manufacturing services that are part of a global manufacturing arrangement also in Chapter 10
- The service element is defined in Chapter 11; and
- Supplementary recording of related goods movements discussed in Chapter 11

Charges for the Use of Intellectual Property n.i.e.

- Definition of intellectual property products introduced
- Clarification on outright sale/purchase and other transaction related to IPPs provided

Marketing assets (new in services)

- Outright sales will now be in services rather than capital account, as a new services category.
- Treatment of licenses – no major changes.
Chapter 11 – Services

Travel

- Treatment of package tours clarified: as a basket of at least three major services
  - The services themselves (for example, transport, accommodation)
  - The services provided by the tour operator
  - The margin of the travel agency (usually different from the tour operator) selling the tour

- Clarification on health and education related travel
  - Scope of “medical reasons” follows the definition of “health and medical care” from IRTS 2008
  - Travel expenses of patients’ companions to be included under “other personal travel” treating them as “travelers”
  - Treatment of companions of education-related travelers-classified as “other personal travel” for consistency with companions of traveling patients

Transport

- CIF to FOB treatment clarified for insurance premiums and insurance services
Chapter 11 – Services

Financial services

- Financial services provided by fintech (e.g., payment services/peer-to-peer lending services/other financial services such as capital raising/investment management enabled by fintech) are classified in the financial services—no new service categories introduced
- Margins on buying and selling transactions—further elaboration on the relevant concepts including practical challenges in compiling this item

Insurance

- Hybrid insurance products are classified into life (financial account) or nonlife insurance (current transfers) depending on which features are predominant
- Insurance services through fintech (i.e., InsurTech) are covered under insurance and pension services
Chapter 11 – Services

Intermediation services (including digital intermediation)

- Reference to services merchanting in *BPM6* (10.160) to be deleted
- Fee-based digital intermediation platform (DIP) services defined - *intermediation services enabling transactions between multiple buyers and multiple sellers, without the intermediation platform taking economic ownership of the goods or rendering-services that are being sold*
- Fee for services intermediated by third party (including DIPs) — record under trade-related services

Personal, Cultural, and Recreational Services

- Tele-health/tele-education are included under Other personal, cultural, and recreational services

Government Goods and Services n.i.e.

- Additional specific products to be included under other services supplied by and to governments—along the lines of the CPC divisions 91 and 99

Construction services

- Add construction, add construction services (supplementary)
Goods and services topics to be covered elsewhere

- Digital economy covered in more detail in Chapter 16 - Digitalization
- Price and volume data discussed in Annex 5 –Selected issues on cross-border trade
- MNEs and globalization (in Chapter 15 - Globalization)
- Trade by enterprise characteristics (in Chapter 15 - Globalization)
- Additional breakdowns Annexes 5 & 11 (data by partner economy)
- Trade by invoice currency (Annex 5)
- Informal trade (Chapter 18)
Chapter 12 – Earned Income Account

- **New:** *BPM6* Primary Income Account is called the Chapter 12 - *Earned Income Account* in *BPM7*

- **New items**
  - New treatment of superdividends
  - Supplementary information on portfolio investment
  - Direct investment relationship will be de-emphasised (i.e. income broken down by direct investment in DIE, reverse investment, between fellows), and is a memorandum item of the standard components
Types of earned income 1

Structure as in the *BPM6 Ch 11*.

A. Compensation of Employees – no significant changes except to be renamed “remuneration of employees” throughout BPM and SNA

B. Dividends and Withdrawals of Quasi-Corporations

- The concept of superdividends for DI to be discarded
- Income includes distributions of earnings from the current period or accumulated from earnings in previous periods
  - This does not hold for PI - dividends paid on PI such as to IF shareholders or domestic dividends received are up to the amount of current earnings

C. Reinvested Earnings

- Supplementary recording of portfolio share of retained earnings of enterprises and other reinvested earnings on PI
  - This gives a complete picture of nonresident claims
- Clarification of calculation of RIE of collective investment funds (IFs)
  - Expenses of IFs are treated as being paid by the unit shareholders
**Types of earned income 2**

**D. Interest and Similar Returns**

- ‘Interest’ to be replaced by “interest and similar returns” to include the broader interest-like returns on Islamic instruments.
  - A sub-category within interest and similar returns showing investment income for Islamic finance where this is significant.
- Negative interest payable on financial instruments is recorded as a negative expenditure and negative interest receivable is recorded as a negative revenue.
- Reverse transactions and Repos
  - legal but no economic change of ownership
  - On-selling of securities as a negative asset is recorded when on-selling takes place and results in the recording of negative interest and dividend credit/revenue.
Chapter 13 Transfer Income Account

- New: *BPM6* Secondary Income Account is called - **Transfer Income Account** in *BPM7*

- The structure will be maintained as in the *BPM6 Ch 12*

- The chapter will include some further clarifications and examples with no major changes.
  - Distinction between current and capital transfers
  - Fine/penalty transactions time of recording:
    - is when a legal and unconditional claim to the funds is established
  - Treatment of licenses
    - record as taxes compulsory payments for non-transferable licenses
Chapter 13 Transfer Income Account

- Distinction between current and capital transfers for insurance and compensation payments
  - Major catastrophic events determining if nonlife insurance claims are capital
  - Compensation payments are capital if they are intended to recover losses incurred over a multi-year period or to replace an asset
- Treatment of hybrid insurance
- Nonrefundable contributions to government under citizen-by-investment (CBI) programs are either current or capital transfers based on the specific features of the program
- Concessional lending and transfer element – only as a supplementary item
Capital Account 1

The structure will be maintained as in the BPM6 Ch 12

New items

- Crypto assets without a corresponding liability recorded as nonproduced, nonfinancial assets
- Non-fungible tokens (NFTs) that convey limited commercial rights recorded under contracts, leases, and licenses
- Marketing assets are removed from Capital Account, they are now treated as produced nonfinancial assets (in the services account)
- Table 13.1, Overview of the Capital Account
  - will be updated to reflect the new category of Crypto Assets under acquisitions and disposals of nonproduced, nonfinancial assets
THANK YOU FOR YOUR ATTENTION!
Integrated IIP: Direct Investment and Portfolio Investment

MARCH 6-7, 2024

IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
Themes of this presentation will be mainly covered in the following chapters of BPM7:

- Chapter 5. Classifications of Financial Assets and Liabilities
- Chapter 6. Functional Categories
- Chapter 7. International Investment Position
- Chapter 8. Financial Account
- Chapter 9. Other Changes in Financial Assets and Liabilities Account
Integrated IIP: Direct Investment
Direct Investment: Main Changes

- Breakdown of **direct investment data by sector** as **new standard components**
  - Breakdowns by direct investment relationship (e.g., reverse investment) and reinvestment of earnings → **memorandum items (in ‘standard items’)**

- **Dividends and withdrawal of equity**
  - The concept of **superdividends will no longer apply** to direct investment.
  - Any **distributions of accumulated reserves from ordinary earnings** should be treated as **dividends**.
  - However, **exceptional distributions related to the sales of assets** should be recorded as **withdrawals of equity**.
  - Superdividends for direct investment may be reported on a supplementary basis...
Direct Investment: Main Changes (2)

- Valuation of unlisted equity
  - Three preferred methods (with a decision tree for implementation guidance)
    - Own funds at book value
    - Recent transaction price
    - Market capitalization
  - Equity in quasi-corporations—three preferred methods approach.
  - Treatment of negative equity—to be elaborated.
    - Discussions at BOPCOM and AEG:
      - Allow negative equity as the default option
      - Zero out only in exceptional cases ("strictly limited liability")
Decision tree for the valuation of unlisted equity
Direct Investment: Clarifications

- **Investments in investment funds shares**
  - Always portfolio investment irrespective of the equity held.
  - However, investments by the fund are still to be treated as direct investment, should they fulfil the criterion regarding *significant influence/control*.

- **Equity in international organizations**
  - Excluded from DI ➔ *Other Equity and Equity in International Organizations* in *other investment*.

- **Differences between transaction prices and the values recorded in positions** should be treated as *other price changes* (e.g., unlisted equity).
Direct Investment: Updated Annex on Direct Investment (Annex 6)

- Supplementary framework by ultimate investing economy (UIE) and the ultimate host economy (UHE), and identification of pass-through funds.

- Corporate inversions, Greenfield investment and extension of capacity — definition and guidance on supplementary data collection.

- Public-private partnerships, Cash pooling — concepts, scope, and statistical treatments.
Direct Investment: New Supplementary Data

- Data on **greenfield investment and extension of capacity**
- Data on **corporate inversions**
- Direct investment statistics by **ultimate investing economy**
- Direct investment statistics that **look through SPEs to the first operating unit** as a first step in presenting data by ultimate host economy
- Direct investment statistics identifying **pass-through funds**
- Data on **superdividends** may be reported on a supplementary basis
- Direct investment **inter-company lending** (as supplement to the reconciliation table)
Integrated IIP: Portfolio Investment
**Portfolio Investment: New Concepts**

- **Superdividends** introduced in Portfolio Investment
  - Large and irregular payments made by corporations to their shareholders or owners that are funded from accumulated reserves or sales of assets.
  - The difference between the payment and the distributable income of the relevant accounting period is recorded as a superdividend under withdrawal of equity.

- **Reinvestment of earnings**
  - Added as a supplementary item in BPM7.
Portfolio Investment: New Supplementary Data

- Debt securities at nominal values as a supplement to market valuation.
  - Report debt securities at nominal value as a supplement to market valuation.
  - Introduce table to reconcile nominal and market valuation of debt securities liabilities.

- Reinvestment of earnings
Portfolio Investment: Clarifications

- **Short positions** — brief clarification on their recording

- **Positions in unlisted portfolio investment equity securities** without an observable market price — may be valued using the methods for direct investment unlisted equity.

- **Remaining maturity** — clarifications and additional guidance
  - Treatment of debt instruments repaid in installments.
  - Concept of remaining maturity and its proxy for recording.
  - Currency composition information encouraged.
THANK YOU FOR YOUR ATTENTION!
Integrated IIP: Financial Derivatives, Other Investment, and Reserve Assets

MARCH 6-7, 2024

IMF Statistics Department – United Nations Economic Commission for Europe
SNA / BPM Joint Virtual Outreach Seminar
Themes of this presentation will be mainly covered in the following chapters of BPM7

- Chapter 5. Classifications of Financial Assets and Liabilities
- Chapter 6. Functional Categories
- Chapter 7. International Investment Position
- Chapter 8. Financial Account
- Chapter 9. Other Changes in Financial Assets and Liabilities Account
Integrated IIP: Financial Derivatives
Financial Derivatives: New Breakdowns

• New breakdowns of Financial Derivatives by
  ▪ Market risk category
  ▪ Instrument
  ▪ Trading venue
Financial Derivatives: New Guidance

- Recording of **transactions on a net basis** is acceptable where separate data on transactions in assets and liabilities are not available.

- All **revaluation effects** are due to **other price changes** (rather than **exchange rate changes** in BPM6) for those types of derivatives where it may not be practical to separate exchange rate changes from other revaluations.

- Methodological guidance for the **recording of novation and portfolio compression** as financial transactions, including the role of central counterparties.
New Annex on Financial Derivatives and Reverse Transactions (Annex 7)

- **Financial derivatives** will be discussed comprehensively with new recommendations (e.g., classification by risk category).
- **Reverse transactions** (e.g., repos) will also be discussed comprehensively with clarifications.
Integrated IIP: Other Investment
Other Investment: Subscription Rights, Equity in International Organizations, and Factoring

- Subscription rights
  - Clarified to be recorded as equity.

- Equity in international organizations
  - Recorded in renamed “Other equity and equity in international organizations.”

- Factoring
  - Claims under factoring are recorded in loans (to be reclassified from accounts payable/receivable).
Other Investment: Insurance and Pension

- Hybrid insurance products
  - To be allocated to life or nonlife insurance depending on which features are predominant.

- Autonomous employer-independent pension schemes
  - Qualify as social insurance.
Other Investment: Valuation

- Valuation of nonnegotiable instruments
  - **Nominal valuation principle for loans** will be maintained.
    - Strengthen the existing framework to **allow for value reset even beyond cases of bankruptcy and liquidation**, when there is public evidence of loan deterioration.
  - **Concessional loans**—positions are to be valued at nominal value as any other loan based on the contractual interest rate.

- **Other investment/equity in international organizations** and other equity positions—may be valued using the methods for DI-unlisted equity.
Other Investment: Clarifications and additional guidance

- Remaining maturity
  - Treatment of debt instruments repaid in installments.
  - Concept of remaining maturity and its proxy for recording.
  - Currency composition information encouraged.
Integrated IIP: Reserve Assets
Reserve Assets: New Guidance

- Securities and gold collateral under repurchase agreements reclassify them from reserve assets (e.g., to portfolio investment).
- Off-market central bank currency swaps exchange of deposits with maintenance of value.
- Standard (market priced) currency swaps exchange of deposits with a financial derivative (forward) contract.
- IMF Resilience and Sustainability Trust (RST)—contributors’ loan and deposit claims other claims/other reserve assets (Annex 9 provides additional details).
- Frozen assets reclassify to the relevant functional category (e.g., portfolio investment).
Reserve Assets: Clarification and New Presentation of Net International Reserves

- **Standard statistical definition of Net international reserves** (NIR) based on the framework of the Reserves Data (IRFCL) Template.

  \[ \text{NIR} = \text{Reserve assets} - \text{Net short-term foreign currency drains} \]
THANK YOU FOR YOUR ATTENTION!
Overview of the Main Changes to the 2008 SNA

MARCH 6-7, 2024

IMF Statistics Department – UNECE
Joint Virtual Outreach Seminar on the Updates of the Statistical Manuals (BPM7 and SNA 2025)

Pete Harper
SNA Update Project Manager

Peter van de Ven
SNA Update Lead Editor
AGENDA

Recommendations for Conceptual Changes

Recommendations for Additional Tables / Data Items
Overview of proposed changes

TABLE 2 Update of the 2008 SNA – Recommendations that impact on the measurement of important national accounts aggregates and/or require the compilation of additional statistics

<table>
<thead>
<tr>
<th>Conceptual change</th>
<th>Additional data item/table</th>
<th>Clarification Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Impact on GDP</td>
<td>Impact on NIP</td>
<td>Impact on net worth</td>
</tr>
</tbody>
</table>

A. Generic Issues

B. Further specifications of statistical units and revisions in institutional sectoring

C. Further specifications of the scope of transactions including the production boundary

D. Further and further specifications of the concepts of non-financial assets, capital formation and consumption of fixed capital/depreciation, including changes related to other transactions in goods and services

E. Further refinement of the treatment and definition of financial corporations, financial instruments and financial assets

F. Broader the framework of national accounts to capture wellbeing and sustainability

G. Other Issues

A.4 IE.1 Statistics framework for the informal economy

B.1 6.1 Distributions of household income, consumption and wealth

B.2 6.2 Treatment of MNE and intra-MNE flows

B.3 6.4 Treatment of Special Purpose Entities and residency

B.4 6.7 Impact of Joseph Seagram Reorganization

B.5 6.18 Statistical units

B.6 6.4 Treatment of Special Purpose Entities and residency

C.1 D2.5 Incorporating digital intermediary platforms into the SNA

C.2 A2.1 Treatment of rent

C.3 A2.2 Treatment of the international tourism services

C.4 A3.3 Treatment of the output of financial intermediaries

C.5 A15.3 Debt Concessionality

C.6 D2.1 Asymmetric treatment of reinvested earnings

C.7 D2.7 Identifying superdividends and establishing the borderline between dividends and withdrawal of equity in the context of direct investment

C.8 A2.1 Treatment of “net sales” for the “Accounting of Sales”, “Marking down assets” and “Intangible Assets

C.9 F1.2 Covering hybrid insurance and pension products

D.1 D4.6 Recording of data in the national accounts

D.2 F1.18 The recording of crypto assets in macroeconomic statistics

D.3 W5.5 Economic ownership and depletion of natural resources

D.4 W5.13 Treatment of non-consistent energy resources as assets

D.5 W5.8 Accounting for biolitical resources

D.6 D7.1 Improving the validity of statistical intelligence in the national accounts

D.7 W5.12 Environmental classifications

E.1 F.1 More disaggregated institutional sector and financial instruments breakdowns

E.2 F.18 The recording of crypto assets in macroeconomic statistics

E.3 F.42 Valuation of debt securities at both market and nominal value

E.4 D.12 Treatment equity in international organizations that is in the form of unlisted shares or non-negotiable equity

E.5 X.16.1 Accounting for pensions: supplementary table on household retirement resources

E.6 F.14 Financial services by type

E.7 F.5.5 Identification of energy consumption

E.8 W5.9 Recording of proceeds

F.1 W5.11 Environmental classifications

F.2 D1.4 Recording and valuating "net" products in an IMF-consistent account

F.3 D2.3 Examining the validity of disaggregation in economic statistics through the development of digital supply-use tables

</tbody>
</table>

---

*IMF | Statistics*
**General Observations**

**Only a limited number of conceptual changes affecting macro-economic indicators, such as GDP/NDP, government deficit, and net worth**

- Recognition of **data** as produced assets
- Recognition of **marketing assets** as produced assets
- Renewable energy resources and adjustments in the **treatment of biological resources**
- Recording **depletion** of natural resources **as a cost of production**
- **Split-asset approach** for natural resources (no impact on macro-economic indicators mentioned above)
- Improving consistency in the application of the **sum-of-costs method**
- Changes in the measurement of the **output of central banks**
- Other **minor changes** to the 2008 SNA (no impact on macro-economic indicators)
2008 SNA: Recognized databases as produced assets, but not the information content

2025 SNA: Also recognizes the information content of electronic data collected and used in production

Valuation using the sum-of-costs method:
- costs of planning, preparing and developing a data production strategy
- costs associated with accessing, recording and storing information embedded in OPs, including explicit purchases of OPs and already produced data
- costs associated with designing, organizing, testing and analyzing the data in order to draw information and conclusions from it
- consumption of the fixed capital used, including return to capital

Change may have significant impact on GDP and net worth
Marketing Assets

- **2008 SNA:** Marketing assets (and goodwill) only recognized as non-produced non-financial assets, the measurement of which is limited to explicit purchases of the relevant assets (or implicit purchases when a corporation is purchased at a price higher than its net worth).

- **2025 SNA:** Recognizes marketing assets as produced assets, thus significantly extending the asset (and production) boundary with assets produced for own final use.

- **Valuation using the sum-of-costs method:**
  - Further research in delineating, in practice, expenditures leading to the build-up of (fixed) capital from current expenditures.

- **Change may have significant impact on GDP and net worth.**
Renewable Energy Resources and Adjustments in the Treatment of Biological Resources

- Explicit recognition of renewable energy resources (solar, wind, geo-thermal, etc.)
- Three changes and clarifications to the 2008 SNA:
  - 2008 SNA included a discrete choice between cultivated and non-cultivated resources yielding once-only products, based on management and control; 2025 SNA includes a differentiation between migrating resources (non-cultivated) and non-migrating resources (cultivated, based on continuum from intensely managed to totally undisturbed)
  - Regeneration of biological resources to be recorded as gross fixed capital formation, while – similarly to mineral and energy resources – depletion is treated as a cost of production (see next slide)
  - Clarifications for the measurement of work-in-progress
- Minor impact on GDP, no impact on net worth (only shifts between non-produced and produced assets, and between work-in-progress and underlying assets)
Recording Depletion of Natural Resources as a Cost of Production

- 2008 SNA: Depletion of natural resources treated as other changes in the volume of assets
- 2025 SNA: Depletion to be recorded as a cost of production, similar with the recording of consumption of fixed capital
- Change will have an impact on NDP, especially in natural resource-rich countries
Split-Asset Approach for Natural Resources

- 2008 SNA: **Natural resources** to be recorded in the accounts of the legal owner (typically government)

- 2025 SNA:
  - **Natural resources** to be recorded in the accounts of the legal owner and extractor, according to the appropriation of the resource rents
  - **Accounting for depletion in line with SEEA Central Framework 2012** (i.e., allocation of depletion in line with appropriation, by adjusting the rents paid by the extractor to the legal owner)
  - **Changes in ownership** to be recorded as other changes in the volume of assets

- No change to GDP/NDP and net worth; only change in the allocation of the relevant assets across sectors
Improving consistency of the sum-of-costs method (1)

- In the absence of market prices, application of **sum-of-costs method**, as an approximation of such market prices

- For **market producers** (output for own final use):
  - Intermediate consumption
  - Compensation of employees
  - Consumption of fixed capital
  - Net return to fixed capital
  - Other taxes (less subsidies) on production

- **Four issues in relation to the 2008 SNA**
  - For **non-market producers**, relevant output is valued **excluding return to fixed capital**
  - **Return to capital is excluded for non-financial assets other than fixed assets**
  - Inclusion or exclusion of **payments for rent** on, for example, land and natural resources
  - Inclusion or exclusion of **depletion**, in addition to consumption of fixed capital
Improving consistency of the sum-of-costs method (2)

2025 SNA:

- All relevant output valued including a return to capital, thus also for non-market producers
- Inclusion of return to non-financial assets other than fixed assets, thus including inventories and non-produced non-financial assets
  - Note: Return to city parks and historical monuments to be excluded on pragmatic grounds
- Inclusion of rent as a cost element
- Inclusion, if relevant, depletion of natural resources
- Change may have a significant impact on GDP, and a more moderate impact on net worth
Changes in the Measurement of the Output of Central Banks

2008 SNA:
- Possibility of **FISIM included**
- **Two types of services:**
  - Monetary policy services (non-market output)
  - Supervisory services (non-market or market, depending on fees paid for these services)
- **Non-market output allocated to government**, with a concomitant current transfer

2025 SNA:
- **FISIM excluded** on conceptual grounds
- **Further extension of services**, to include promoting financial stability and monitoring the payments system
- **All output considered as non-market output, with payments by financial corporations considered as current transfers**
- **Output recorded as output for own final use** by the central bank

Change in GDP = change in recording of transfers
Another Minor Conceptual Changes to the 2008 SNA

- Treatment of **reinvested earnings of FDI-enterprises**: limited to payments related to the sales of assets
- **Extension of the definition of rent** (i.e., payments to the owner for putting certain non-produced assets at the disposal of another unit), by including non-produced non-financial assets other than natural resources
- Recording of **work-in-progress** for fixed assets partially transferred and for fixed assets produced for own final use
- Limitation of **concessional loans** to those provided by employers to employees
- All **equity in international organizations** to be considered as “other equity”
- **Securities provided as collateral**, which are not readily available for meeting balance of payments financing needs, to be excluded from the cash borrower’s reserve assets; for gold swaps, this reclassification leads to a demonetization of the gold bullion
General Observations

- A distinction can be made between the following tables and data items:
  - **Sequence of economic accounts**: standard set of accounts and tables, the compilation of which is recommended
  - Supplementary tables/items
  - Extended/thematic accounts/tables

- The **SNA does not have the power of law**, but one of the main factors for the success of the SNA is the worldwide compilation of statistics according to its conceptual guidance

- The objective is that **as many countries as possible compile the sequence of economic accounts**

- Encouraged tables and accounts more dependent on national and regional priorities
Accounting for Well-being

- To arrive at an improved analysis of the distribution of income, consumption, saving and wealth across households:
  - Standard breakdown of households by income and wealth decile
  - More detailed labour accounts

- In addition, various other breakdowns of households (e.g., household composition, main source of income) are put forward as supplementary items

- Extended/thematic accounts and tables:
  - Unpaid household service work
  - Education and human capital
  - Health
Accounting for sustainability

- To arrive at an improved analysis of the **distribution of income, consumption, saving and wealth across households**:  
  - Standard breakdown of households by **income and wealth decile**  
  - More detailed **labour accounts**

- In addition, various **other breakdowns of households** (e.g., household composition, main source of income) are put forward as supplementary items

- Extended/thematic accounts and tables:  
  - **Unpaid household service work**  
  - **Education and human capital**  
  - **Health**
Accounting for Globalization

- To arrive at a better understanding of the impact of globalization on the generation and distribution of income, and also to arrive at an improved international comparison of fiscal balances, standard breakdowns of corporations into:
  - Foreign-controlled corporations
  - Public corporations
  - National private corporations
  - Of which: Part of domestic MNEs

- In addition, various supplementary items and tables are encouraged:
  - Extended supply and use tables (eSUTs)
  - Data on Special Purpose Entities (SPEs) for those countries where these entities are important
Accounting for Digitalization

- To improve the visibility of the digital economy:
  - More detailed breakdowns of certain asset categories within intellectual property products, in the sequence of economic accounts
  - In addition, digital supply and use tables are encouraged as extended/thematic tables, also including extended accounting for “free” services (Facebook, Instagram, TikTok, etc.)
  - Further breakdowns of subsectors of financial corporations of Fintech-related activities, as supplementary items in countries where these activities are significant
Accounting for Financial Risks and Vulnerabilities

- Since the Great Financial Crisis, it is considered important to arrive at an improved accounting for financial risks and vulnerabilities:
  - **Non-bank financial intermediation** (shadow banking): supplementary tables with more detailed breakdowns of financial corporations, as well as additional details for certain financial instruments
  - Breakdowns of **financial derivatives**
  - **From-whom-to-whom** (supplementary) **tables** (not included in the consolidated list)
Other supplementary Items and Tables

- **Concessional loans**: supplementary data on concessional loans provided by government and international organizations

- **Reinvested earnings**: 
  - Breakdown of FDI-related dividends into payments as defined for non-FDI corporations and other payments
  - Supplementary data on recording reinvested earnings for all equity in corporations, direct investment as well as portfolio investment

- **Valuation of debt securities** at both market value and nominal value for liability positions

- Supplementary table on **provisions**, broken down into three categories: financial assets related, non-financial assets related, and provisions unrelated to assets
Next steps

- At its 55th Session, to be held on 27 February - 1 March 2024, the United Nations Statistical Commission will be asked to **endorse the Report of the Intersecretariat Working Group on National Accounts on the recommendations for the update of the 2008 SNA**

- In the meantime, drafting of the 2025 SNA continues
  - The initial focus of this work has been **on new and substantially revised chapters**
  - These chapters are subject to **global consultation on a chapter-by-chapter basis**

- In May-July 2024 the **complete draft** of the 2025 SNA will be circulated for global consultation
  - The chapters that are not new or substantially revised will be shown in ‘track changes’

- There is also a significant program of work that is developing **guidance materials to support the implementation** of the 2025 SNA
THANK YOU FOR YOUR ATTENTION!
Financial Issues

MARCH 6 – 7, 2024

IMF Statistics Department – UNECE
SNA / BPM Joint Virtual Outreach Seminar
AGENDA

Financial Corporations (SNA Chapter 29)

Selected Issues on Financial Instruments (SNA Chapter 25)

From-whom-to-whom Tables and Related Financial Analysis (SNA Chapter 37)
New Chapter 29 2025 SNA: Financial corporations

This new SNA 2025 chapter will include parts of what was covered in 2008 SNA Chapters 4 (Institutional units and sectors) and 21 (Measuring corporate activity).

It will also:

• Expand on the 2008 SNA Chapter 6 (The production account).

• A review of the Financial sectors and subsectors, including concise information on data sources, and discuss different corporate ownership structures.

• The important role placed on non-bank financial intermediaries (or shadow banking).

• Alignment with Monetary and Financial statistics (MFSM 2016)
Overview of Financial Corporations and Financial Activity

This section will discuss the role, diversity, and growth of financial corporations by reviewing:

- The impact of technology innovations on financial industries including integrating financial technology companies into the existing framework and adding supplementary (of which) items (This will be closely aligned with SNA Chapter 22 on digitalization).

- The relationship of SNA sectors with nationality-based statistics, covering issues such as residency and consolidation.

- New “of which” breakdowns of Financial corporations and sub sectors by control.
Financial Corporations’ Sectors and Subsectors

- A review of the detail subsectors of financial corporations, following the same structure used in 2008 SNA Chapter 4 (2025 SNA Chapter 5), providing much more detail analysis of their functions as financial intermediaries/auxiliaries.

- For each main subsector of financial corporations, the following structure will be provided:
  - Definition and key activities
  - Subcomponents
  - Source data
  - National accounts’ considerations
Non-Bank Financial Intermediation

Since the financial crisis, there has been much emphasis on intermediation that is occurring outside of the “regular” banking system – non-bank financial intermediaries (NBFIs). For the SNA, NBFIs comprise non-depository financial intermediaries.

The focus will be on the recommended supplementary breakdowns of NBFIs. In terms of new details:

- the insurance sector is broken down into life and non-life subsectors
- the pension fund sector is broken down into defined benefit and defined contribution schemes
- MMFs into constant NAV MMFs and variable NAV MMFs and non-MMFs, while central clearing counterparties which are part of the subsector other financial intermediaries.
- Supplementary breakdowns for captive financial corporations and special purpose entities.
Link to Monetary and Financial Statistics

- The SNA financial corporations’ sectors and subsectors are closely tied to the Monetary and Financial Statistics.
- This section replaces part of 2008 SNA Chapter 27 Links to monetary statistics and the flow of funds.
- The discussion will include sectoring issues, sequence of accounts coverage and classification of financial instruments as well as any conceptual differences pertaining to specific instruments.
2025 SNA - Chapter 25: Selected Issues on Financial Instruments

This chapter will include parts of what was covered in 2008 SNA Chapter 17 (Cross-cutting and other special issues). The chapter will provide additional details for specific instruments.

- The treatment of standardized guarantees
- Financial Derivatives
- Employee stock options; and
- The recording of flows associated with financial assets and liabilities
2025 SNA - Chapter 25 : Selected Issues on Financial Instruments

Treatment of standardized guarantees

No material conceptual issues to underline with the treatment of standardized guarantees. To enhance the interpretability, additional numerical examples will be added.

Financial Derivatives

• Discussion expanded to cover different classifications for financial derivatives and add more details on these types of instruments, under both exchange-traded and over the counter derivatives.

• Functions, accounting, and uses of derivatives in hedging, arbitration and speculation as well as the risks associated with these instruments will be discussed.
Employee stock options (ESOs)

The guidance has not changed, except to note that by the new classification standards for derivatives the following applies:

- ESOs are equity instruments (market risk category). Numerical examples will be added to provide further clarity.
Loan provisions, write-offs, and allowances

- Expand on the discussion of loans. It will explain the concept of provisions against loans booked in a specific period, including both general and specific provisions, and distinguish provisions from write-offs.

The recording of flows associated with financial assets and liabilities

- The starting point for this section is Part 4 of the 2008 SNA Chapter 17. The outline for the section will be altered to start with a discussion of transactions versus other flows and linking these to the sequence of accounts.

- For each financial instrument, a discussion of other transactions as well as other changes in the volume of assets will be provided.
This chapter is related to the flow of funds section of 2008 SNA Chapter 27. Emphasis will be on the from-whom-to-whom (FWTW) dimension of the relevant components in the sequence of SNA sector accounts as well as on a series of institutional sector related financial indicators.

Overview of SNA Sector Accounts Table Structures and Derivation of FWTW Tables

This section will first discuss, the FWTW tables that display the financial instruments for any given sector over time. Followed by the interconnectedness among the institutional sectors and a discussion of the key FWTW data sources in the form of counterpart data and security-by-security databases.
From-whom-to-whom tables in the sequence of SNA accounts

- An overview of the main sectoral table structures and derivation of FWTW tables, including some of the underlying key data sources; FWTW tables in the sequence of SNA accounts; and, on financial indicators than can shed light on financial risks and vulnerabilities. These will include the non-financial accounts, the financial account, and the balance sheets.

- The non-financial accounts are a relatively new addition to FWTW tables. They are nonetheless closely linked to financial accounts and balance sheets, and their construction can provide for additional sub-category details for relevant items.
From-whom-to-whom tables in the sequence of SNA accounts

- The financial account FWTW tables highlight the details of new issues of loans, debt securities, equity, and investment fund shares, as well as borrowing via other instruments in relation to the acquisition of those assets.
- The balance sheet FWTW tables highlight stock inter-relationships across the institutional sectors of the economy.
2025 SNA - Chapter 37: FWTW Tables and Related Financial Analysis

Related Financial Analysis

- The analytical usefulness of FWTW tables, which provide granular information that allows for identifying debtor-creditor relationships among institutional sectors is discussed.

- In addition, a summary of sectoral risk and vulnerabilities, including mechanisms for transmission, by referencing the sectoral balance sheets and the relevant FWTW tables. It will also present other macroeconomic financial indicators.

- Some current macroeconomic uses of institutional sector accounts will also be highlighted: (i) financial stability analysis; (ii) monetary analysis with respect to transmission mechanisms
THANK YOU
Accounting for Wellbeing and Sustainability

MARCH 6 -7, 2024

MF Statistics Department – UNECE
Joint Virtual Outreach Seminar on the Updates of the Statistical Manuals (BPM7 and SNA 2025)

Real Sector Division, IMF Statistics Department
Background

- Institutionalization of GDP as the standard international measure of economic performance over past 70 years has led to its misuse as a general indicator of how well a country and its people are doing, despite expert advice to the contrary
  - **External view:** SNA=GDP > GDP weak measure of wellbeing > hence SNA has little to offer
- However, aim for the SNA to support wellbeing and sustainability analysis in two ways
  - Use of existing national accounts aggregates as inputs to wellbeing and sustainability analysis (e.g. income, consumption, savings, net worth…)
  - Use of SNA accounting rules and structures to organize social and environmental data outside of the SNA itself, which may be linked to form extended accounts
Background

- This summarizes guidance provided in the following new chapters:
  - Chapter 2: National accounts and measures of wellbeing and sustainability
  - Chapter 34: Measuring wellbeing
  - Chapter 35: Measuring sustainability

- Chapter 2 provides an overview while Chapters 34 and 35 give more detail

- Key points
  - Recognition that the approaches to accounting for distinct aspects of wellbeing are at different levels of standardization and development of compilation practice.
  - Accordingly, chapters are neither prescriptive nor definitive, but encourage the compilation of extended accounts and additional breakdowns by using SNA aggregates with other frameworks and data sources
Concepts and SNA limitations

- Wellbeing and sustainability embody economic, environmental and social dimensions
  - **Wellbeing** - material wellbeing of households, impacted by education, health, labor, wealth, social, environmental, freedom and other factors
  - **Sustainability** - ability to satisfy the needs of the present without impacting on the needs of future generations

- Sustainability implies a time dimension, where we need an accounting framework to estimate stocks and flows of economic, human, environmental, and social capitals.

- An accounting-based approach addresses the challenges by compiling a set of composite indicators (based on core dimensions) that may not otherwise provide a coherent connection among the dimensions

- SNA captures only some human and environmental stocks and flows, but can exploit linkages (e.g. SEEA, SAET, SHA) and derive new measures to create extended accounts and further breakdowns.
Concepts and SNA limitations

- SNA aggregates only measure part of material wellbeing:
  - Outputs but not outcomes (e.g. food production and consumption versus overeating)
  - Does not cover subjective wellbeing, or related spiritual or environmental preferences
  - Includes defensive expenditures, excludes externalities – both affect wellbeing

- SNA records exchange values, not welfare values - which include consumer surplus > the internalization of all externalities

- Changes in production and consumption therefore linked to wellbeing, but not directly > utility from consumption of a product ≠ change in wellbeing

- Also note that present production boundary excludes most HH services
  - 2025 SNA will extend this to include unpaid household services

- Overall, no framework, SNA or otherwise, can capture all aspects of wellbeing in a single number - multiple perspectives need to be considered
Existing SNA indicators of relevance

**Income and consumption**

- Relate to current measures of wellbeing
- Importance of net rather than gross measures to account for user cost of capital in generation of income (see Chapter 21)
- Key focus on HH (adjusted) final consumption and disposable income, and saving
  - *Must also consider changes in mix of products consumed, types of income earned*
- Also need to consider
  - Impact on wellbeing of expenditures on collective govt services
  - Prices and volume measures to look at wellbeing trends

**Wealth**

- Relates to current and future wellbeing and hence sustainability
- Accumulation accounts include variety of especially important for HHs
  - *Must consider changes in mix of assets, measures of consumer durables in HFCE*
- Also need to consider
  - Real terms and per capita measures
  - Other broader assets outside SNA but included in comprehensive wealth measures (environmental, human, social – alternate asset boundaries for extended accounts
  - Public infrastructure:
    - roads, schools, hospitals etc.
    - impacts on HH wellbeing
Existing SNA indicators of relevance

Environmental accounts

- While SEEA provides most comprehensive framework, the 2008 SNA already includes measures of:
  - Asset stocks and flows of owned natural assets, including
    - resource rents
    - other changes in value
    - other changes in volume (e.g. mineral discoveries, depletion)
  - Environmental expenditures
  - Environmental taxes and subsidies
Core SNA 2025 updates

Environmental accounts

- 2025 SNA includes updates and additions to these driven by SEEA principles:
  - ✓ Inclusion of stocks/flows of renewable energy resources (revised asset boundary)
  - ✓ Revised approach to measuring natural resource rents
  - ✓ The ‘split-asset approach’
  - ✓ Depletion of natural resources to be recorded as cost of production
  - ✓ Moved from other changes in volume account
  - ✓ Clarification of production boundary for biological resources
    - ✓ Including migratory animal/fish stocks
  - ✓ Updated recording of emissions trading schemes and provisions
Core SNA 2025 Updates

Inclusion of unpaid household labor within the production boundary

- Work within and between households that could be performed by another (the ‘third party’ criterion) to be included – covering
  - Caring, cooking, transport, laundry, household management, shopping, volunteering, information services
- Rationale that as per already-included owner-occupied housing and domestic services, inclusion prevents distortions in levels and growth when switches between self and market provision
- Minimum recommendation for such activity to be measured at least every five years as additional element of productive activity in supply and use tables
- Valuation requires (i) time-use information and (ii) appropriate market sector wage rates

[NB – Labor accounts form new core element of 2025 SNA – see Chapter 16]
Encouraged breakdowns and extensions

Distributional accounts

- Relate to current and future wellbeing and hence sustainability
- Need to break down income, consumption, wealth for households by e.g.
  - Gender, age, education level, employment status, geography…
  - …wealth deciles, home ownership, industry of employment…
- Use of these and other breakdowns depend on analytical questions being asked
Encouraged Breakdowns and Extensions

Education and human capital accounts

Human capital is key to wellbeing:

- Outside the SNA asset boundary (self-embodied, nontransferable) but can be considered an asset, and link to the SNA, in an extended account
- Can be estimated via input cost or lifetime income approaches – though no consensus on best models or modeling assumptions so far (See UNECE 2016 Guide)
- Education and training form a key input to human capital, labor (Ch.16) and production
  - UNECE Satellite Accounts for Education and Training (SAET) are fully SNA consistent and can be developed to provide a wealth of SUT-type breakdowns
THANK YOU FOR YOUR ATTENTION!
Additional slide – Household Distributional Accounts

- Key balancing items to be broken down are:
  - Primary income; disposable income; adjusted disposable income
  - Final consumption expenditure; actual final consumption expenditure
  - Net worth; net financial worth

- ..though distributional measures also useful for wellbeing topics (health, education etc.)

- Unit of analysis = standard definition of a household (private or institutional) with equivalization - but individual member characteristics should be also recorded

- Estimation requirements will include
  - Maintenance of drill-down links between HH survey data and final NA aggregates
  - Linking of multiple data sources via unique identifiers and matching techniques
  - Allocation of macro items like NOE, FISIM to ensure conceptual alignment
  - Appropriate deflation by HH type
  - Inclusion of estimates of consumer durable ownership by HH
Additional slide – extensions to the consumption and production boundaries

- Boundary already includes own-account production/storage and self-consumption of goods – food, clothing, tools, energy – important to wellbeing measures

- For wellbeing analysis can be extended to include:
  
  - **(Core) Unpaid household service work** on health, education, maintenance, transportation, care of others etc. Monetary value and time-use measures required (see UNECE 2017 guide; ICATUS classification)
  
  - **(Extended) Non-productive activities undertaken by individuals** such as sleeping, eating and leisure. No monetary values, but time spent key to wellbeing
  
  - **(Extended) Ecosystem services** including provisioning of crops, livestock and timber; cultural services such as recreation; and regulating services regarding air, water, soil, climate and noise quality
Social capital is generally understood as the combination of formal and informal institutions and networks that support the functioning of our societies and economies.

Measurement of social capital is a developing area but, as yet, its measurement from an accounting perspective is has not well progressed in practice and hence the 2025 SNA does not include any core recommendations or guidance regarding extended or thematic analysis.

Future research may identify ways in which social capital can be effectively defined and measured for accounting purposes.
Elaborating the Accounts, Thematic and Extended Accounts

MARCH 6-7, 2024

IMF Statistics Department – UNECE

Joint Virtual Outreach Seminar on the Updates of the Statistical Manuals (BPM7 and SNA 2025)

Real Sector Division, IMF Statistics Department
AGENDA

Introduction to Chapter

Thematic and Extended Accounts Overview

Roles of Thematic and Extended Accounts

Tools to Develop Thematic Accounts

Steps to Develop Thematic Accounts
Thematic and Extended Accounts

Thematic and Extended Accounts are flexible tools for increasing the visibility of key economic phenomena.

While maintaining coherence with the overall conceptual framework of the SNA, Thematic and Extended and accounts:

- Bring together pertinent data in one place
- Present further disaggregation; and / or,
- Present alternative aggregations and approaches, and broader context

***For topics that can be covered in a single table with a limited scope, a supplementary table can be used.
Thematic and Extended Accounts

- The SNA provides the flexibility for economies to choose the topics for thematic or extended accounts.

- This would be based on the economy’s structure and growth pattern, the key policy issues, and data availability.

- The 2025 SNA encourages extended and thematic accounts to fill important information gaps on aspects of well-being and sustainability. Including:
  - labor account
  - digital economy thematic account
  - household unpaid service work, health, and education and human capital extended accounts
Thematic and Extended Accounts

- Both thematic and extended accounts provide complementary data that allow insight into a key activity or aspect of the economy that lacks visibility in the standard sequence of accounts.

**Thematic**

- Increases the visibility of a certain activity included in standard national accounts aggregates or provide additional detail on its composition.

**Extended**

- Show the effects of expanding the standard national accounts boundary of production, consumption, income, and/or wealth.
Roles of Thematic and Extended Accounts

Thematic Accounts e.g. Tourism, Health, Agriculture, Digitalization (NEW)

- Visibility of key economic activity
- Alternate aggregation to focus on key sector / industry / segment
- Analyze key phenomenon in more details

Extended Accounts e.g. unpaid household work, education & human capital

- Expand or modify the production / consumption / investment boundary
- Test new or experimental methodologies
- Analyze key phenomenon
Bringing Visibility to Informal Activities

Updated Guidance and a Framework on Informal Activities

- The 2008 SNA recognized the importance of informal activities and that they should be integrated in the national accounts. However, neither the 2008 SNA nor the International Labour Organization (ILO) recommendations, at that time, provided a comprehensive framework for measuring the informal economy.

- The revised SNA/BPM chapter will examine the emergence of new informal economic activities that are often associated with lower and uncertain income for workers.
  ✓ Includes some activities linked to digitalization such as informal ride-share services.

- **Goal:** Complete presentation of the informal economy. **Not** focused on exhaustiveness.

- **Informal productive activities** are all productive activities carried out by persons and economic units that are – in law or in practice – not covered by formal arrangements.

- The **informal economy** is defined as constituting all informal productive activities.

* Components of the informal market economy.
Tools to Develop a Thematic Account

Key inputs into a Thematic Account include:

- Supply and Use Tables:
- Additional (More Granular) Source Data
- Alternative Classifications / Aggregations needed to better understand the scope / depth of economic activity being studied

Data from the standard sequence of accounts and additional details from the SUTs will allow for deeper insights into specific activities.
Developing a Thematic Account

Developing a thematic account on a key activity include a planning phase and a multi-step compilation phase.

**Planning**
- Precisely define activity or economic phenomenon

**Compilation**
- Compile Thematic SUTs
- Disaggregate Relevant Elements
- Introduce Complementary Indicators
THANK YOU FOR YOUR ATTENTION!
