South Asia's Path to Resilient Growth

Ranil Salgado and Rahul Anand

"The book is an excellent empirical review of the postpandemic recovery endeavors undertaken by the South Asian nations with insightful macro-economic policy analyses toward inclusive growth and sustainable development. Succinct analyses of required reforms in attaining macro-economic stability along with higher productivity are indicated. This extraordinary book is a must-read for policy planners, researchers, and think tanks dealing with growth and sustainable development."

—Dr. Shamsul Alam, Minister of State, Ministry of Planning, Government of the People's Republic of Bangladesh

"The release of the book, an edited volume of chapters on the topic of South Asia's path back to resilient growth, could not have been timelier. As the pandemic recedes into the background, countries must focus more on restoring medium-term growth prospects. With their large populations, South Asian nations have their task cut out as a demographic bulge is both a challenge and an opportunity for them to sustain growth much longer than other countries might be able to. Economic growth will enable them to accumulate resources that would help them meet the development and standard-of-living aspirations of their households. It will also provide for investing in green technologies and energy transition to deal with climate change and contribute to its mitigation. Therefore, the edited volume is an important exercise. The book reflects on the need for reforms by drawing lessons from South Asia's history and from cross-country comparisons with peers. The return on time invested in perusing its contents would be high for students and teachers of economics and policymakers."

Macroprudential Policy Survey Online

The global financial crisis highlighted the need for dedicated macroprudential policy tools to safeguard financial stability and mitigate systemic risk.

The Macroprudential Policy Survey is a free and regularly updated database capturing information on the policy tools in use by the IMF's membership. Countries are asked to report measures in line with the general definition of macroprudential policy: "the use of primarily prudential tools to limit systemic risk."

This database features information on the institutional arrangements supporting macroprudential policy

in IMF member countries. The survey information fills an important data gap for researchers and policymakers. It can be used to support research in this emerging area—for example, to assess the impact of measures on credit and asset prices. It will also help policymakers learn about the design of other IMF members' policy measures.
