Morocco’s Quest for Stronger and Inclusive Growth
Roberto Cardarelli and Taline Koranchelian

Over the past three decades, Morocco had a remarkable journey to economic stability and development.

Still, Morocco’s quest for strong, resilient, and inclusive growth is far from complete. After accelerating in the first decade of the new millennium, income convergence with advanced economies has slowed over the past 15 years. And the benefits of economic development remain elusive for a significant part of Morocco’s population, particularly young people and women, given their high unemployment rate and the presence of a still-large informal sector. However, one thing does stand out from Morocco’s experience: its policymakers’ recognition that addressing these issues will require a new series of bold and ambitious reforms.

This book provides a broad overview of both Morocco’s economic progress in the past few decades and its economic modernization agenda going forward. To a certain extent, Morocco’s story is a useful example for many developing economies still striving to build the foundations of macroeconomic stability. And the series of reforms that the country has begun to implement provides equally interesting ideas for all countries engaged in the quest for stronger and more inclusive growth.

Digitalization during the COVID-19 Crisis: Implications for Productivity and Labor Markets in Advanced Economies
Florence Jaumotte, Longji Li, Andrea Medici, and others

Digitalization induced by the pandemic was seen both as a possible silver lining to the crisis that could increase longer-term productivity and a risk for further labor market inequality between digital and non-digital workers. The note shows that the pandemic accelerated digitalization and triggered a partial catch-up by less digitalized entities in advanced economies.

Macroprudential Policy Survey Online

The global financial crisis highlighted the need for dedicated macroprudential policy tools to safeguard financial stability and mitigate systemic risk.

The Macroprudential Policy Survey is a free and regularly updated database capturing information on the policy tools in use by the IMF’s membership. Countries are asked to report measures in line with the general definition of macroprudential policy: “the use of primarily prudential tools to limit systemic risk.”

This database features information on the institutional arrangements supporting macroprudential policy in IMF member countries. The survey information fills an important data gap for researchers and policymakers. It can be used to support research in this emerging area—for example, to assess the impact of measures on credit and asset prices. It will also help policymakers learn about the design of other IMF members’ policy measures.
