

International Monetary Fund

World Economic Outlook and the Asia Pacific Region —Global Economy in Flux, Prospects Remain Dim—

(based on Chap. 1 of IMF World Economic Outlook (WEO) October 2025)

Takashi Nagaoka

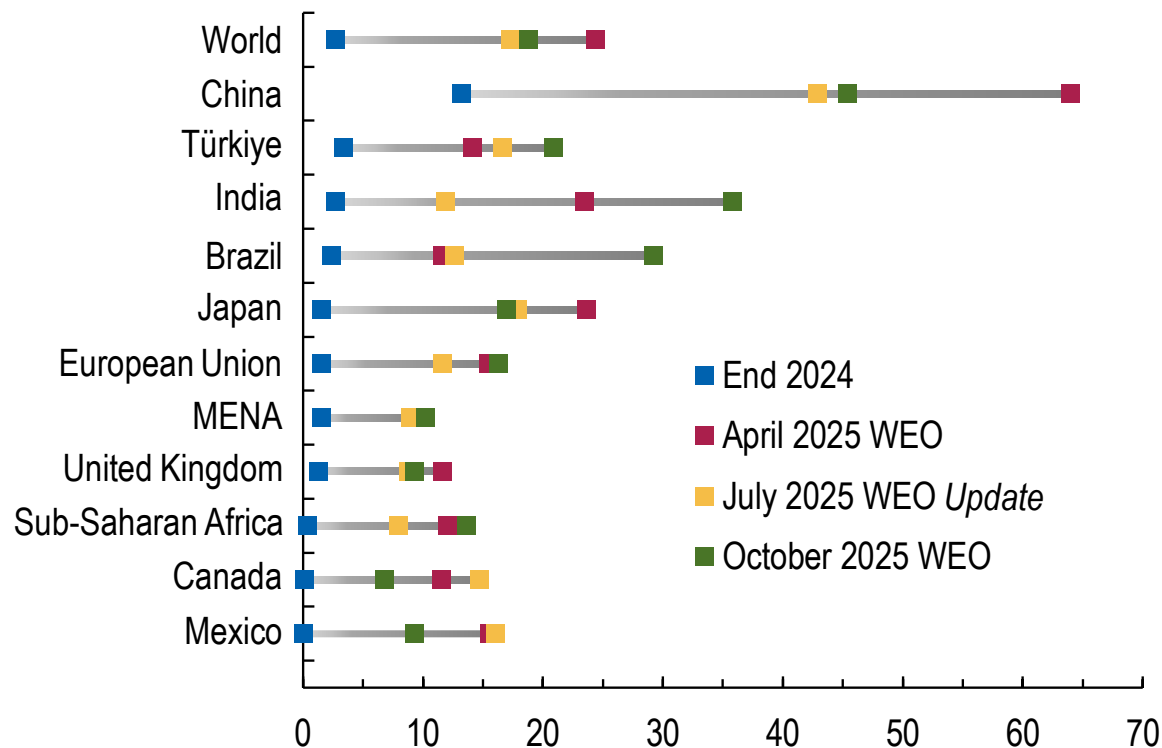

Director, the IMF Regional Office for Asia and the Pacific (OAP)

Seminar at Japan Center for International Finance (JCIF)

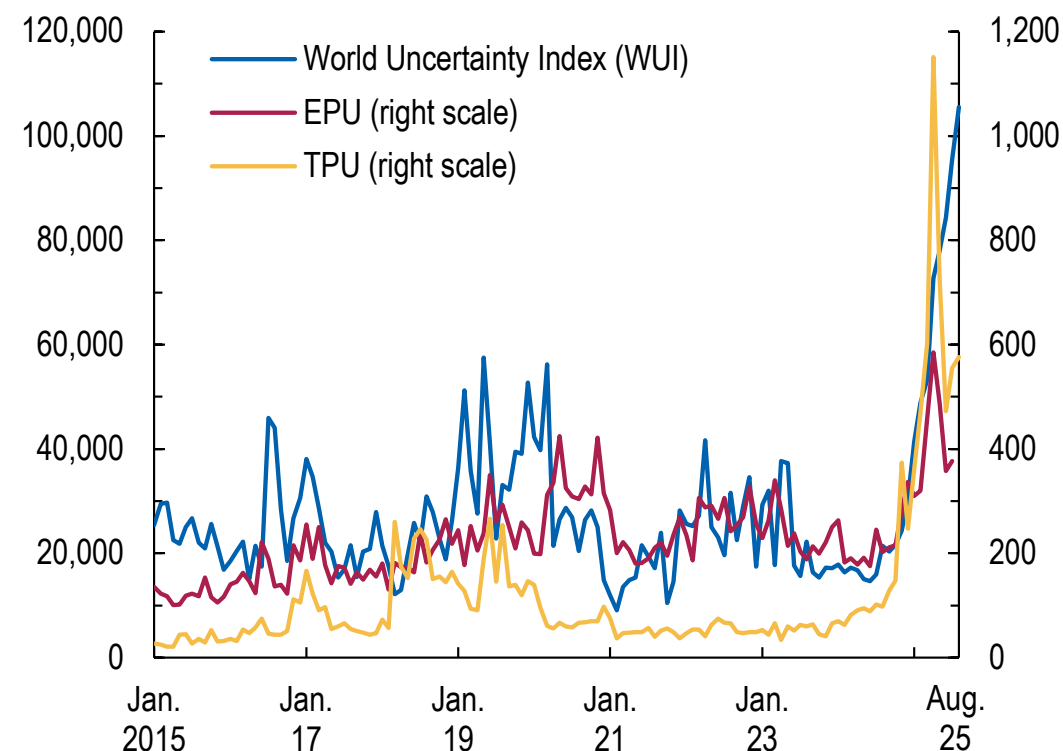

November 25, 2025

Tariffs Start Settling, Policy Uncertainty Remains High

US Effective Tariff Rates by Country
(Percent)

Overall, Economic Policy, and Trade Policy Uncertainty
(Index)

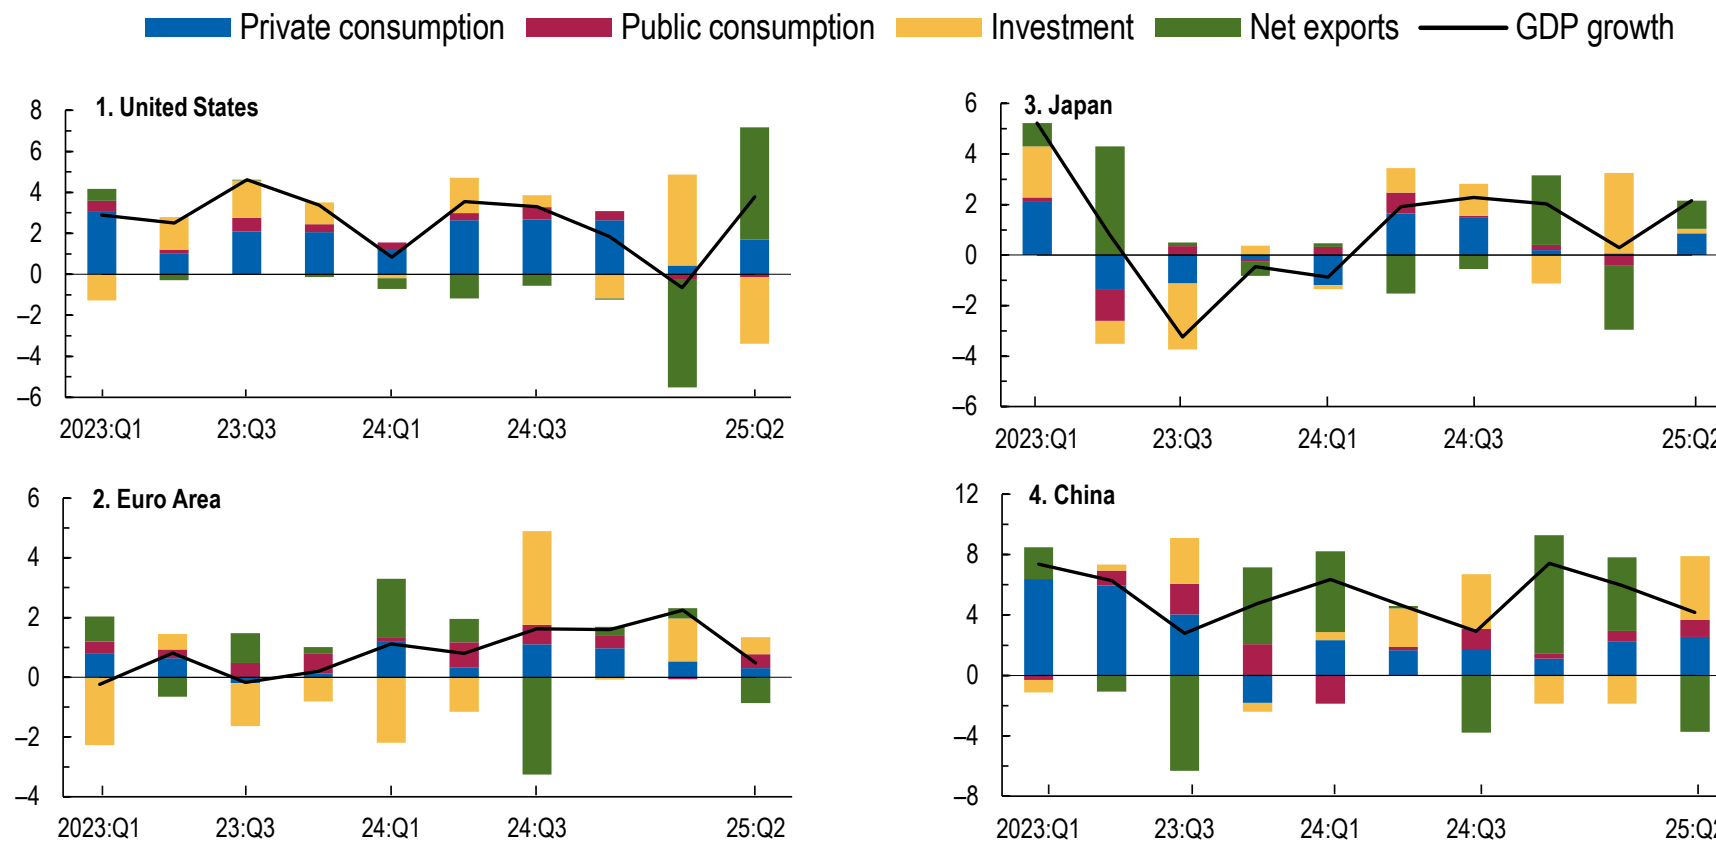

Sources: Ahir, Bloom, and Furceri 2022; Caldara and others 2020; Davis 2016; US International Trade Commission; WTO-IMF Tariff Tracker; and IMF staff calculations.

Note: In the left panel, the effective tariff rate is a weighted average of announced statutory rates. In the right panel, the uncertainty measures are news- and media-outlet-based indices that quantify media attention to global news related to overall uncertainty (WUI), economic policy uncertainty (EPU), and trade policy uncertainty (TPU). MENA = Middle East and North Africa; WEO = *World Economic Outlook*; WTO = World Trade Organization.

Recent Developments

Resilient Activity, Reflecting Trade-Related Distortions

Contributions to Quarterly GDP Growth (Percent, quarter over quarter, annualized)

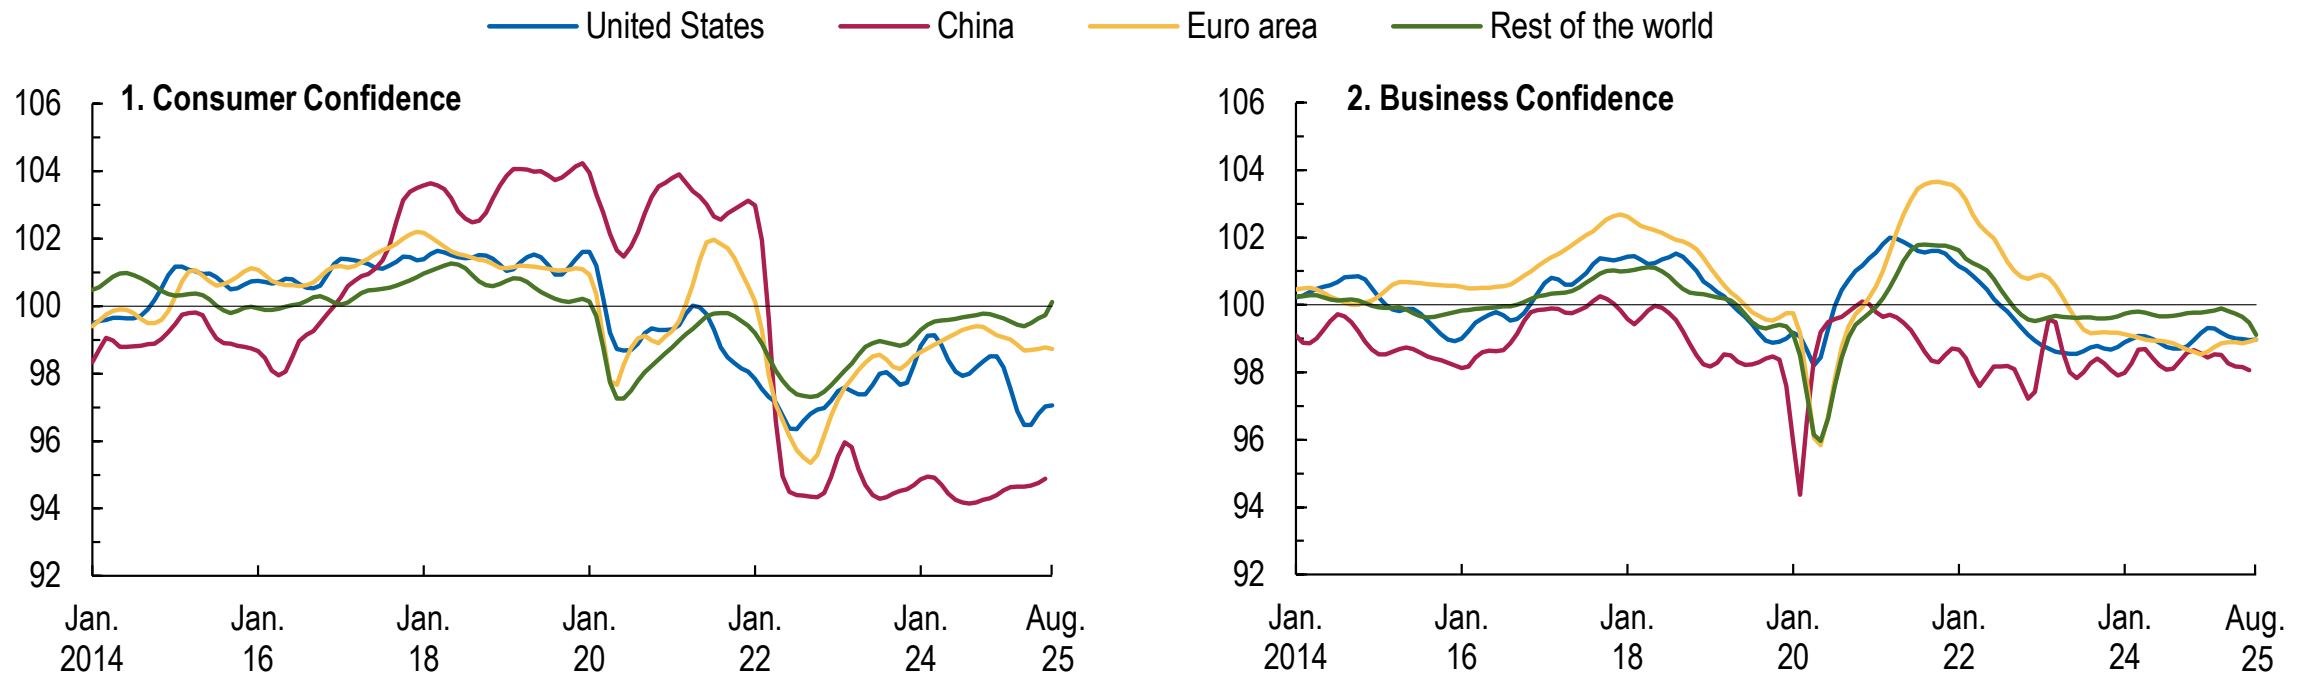

Source: IMF staff calculations.

Note: Figures are calculated using seasonally adjusted series. Residuals are included in the investment contribution.

Underlying Strength Not Clear, Confidence Remains Low

Consumer and Business Confidence (Index, OECD harmonized)

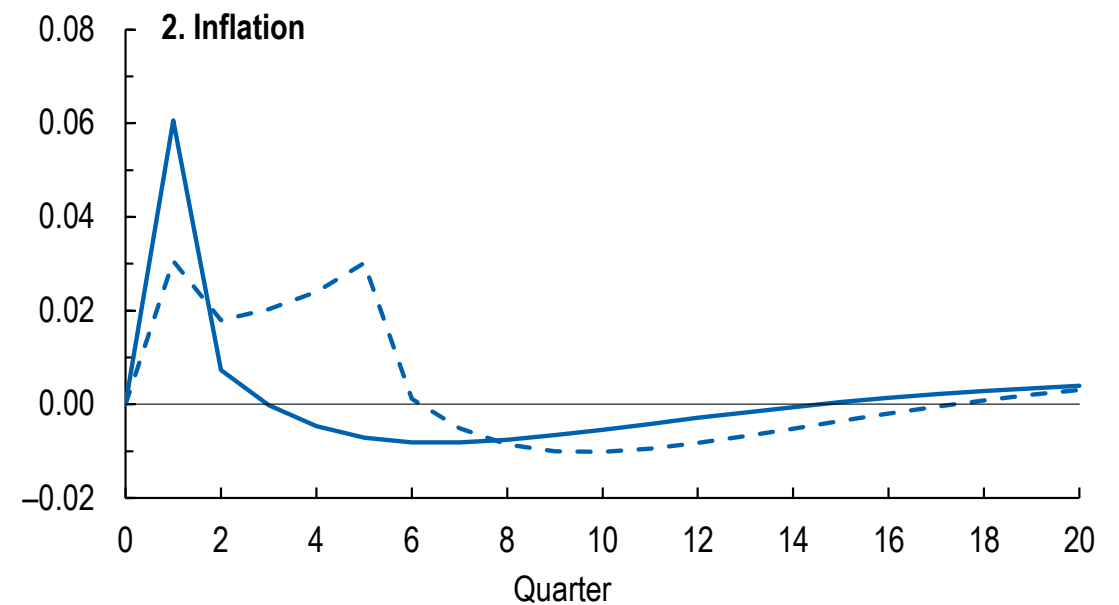

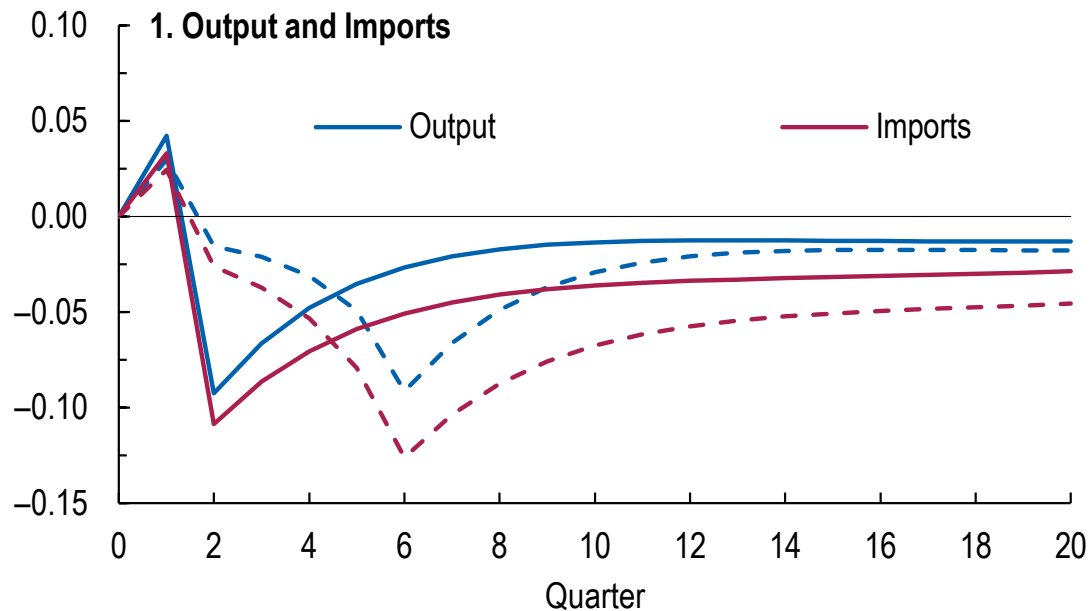

Sources: OECD; and IMF staff calculations.

Note: An indicator above 100 signals a boost in confidence; below 100 indicates a pessimistic view. The rest of the world represents the average value for data across 22 economies. OECD = Organisation for Economic Co-operation and Development.

Uncertainty Impact Likely Still in the Pipeline

Impulse Responses to a Tariff-Uncertainty Shock (Percent deviations from the stochastic steady state)

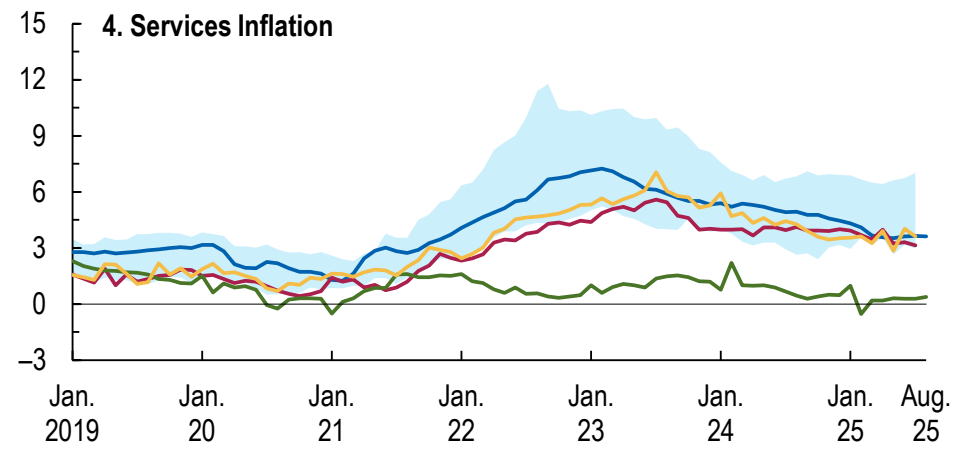

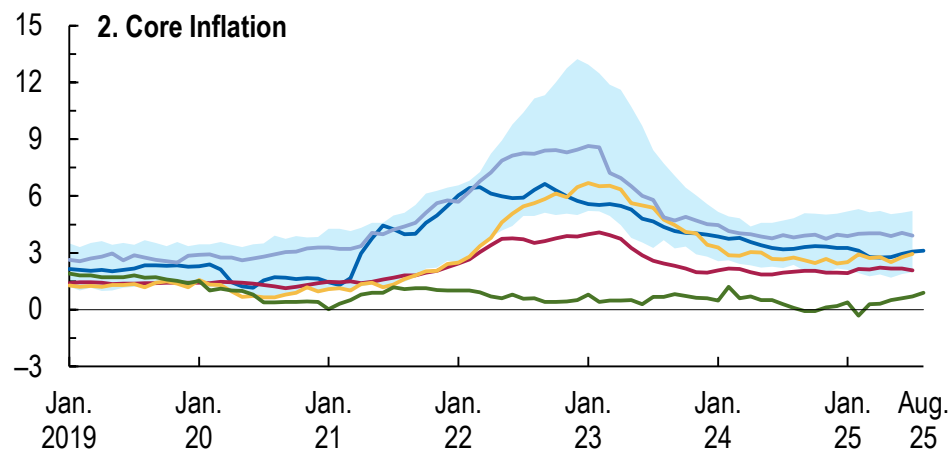

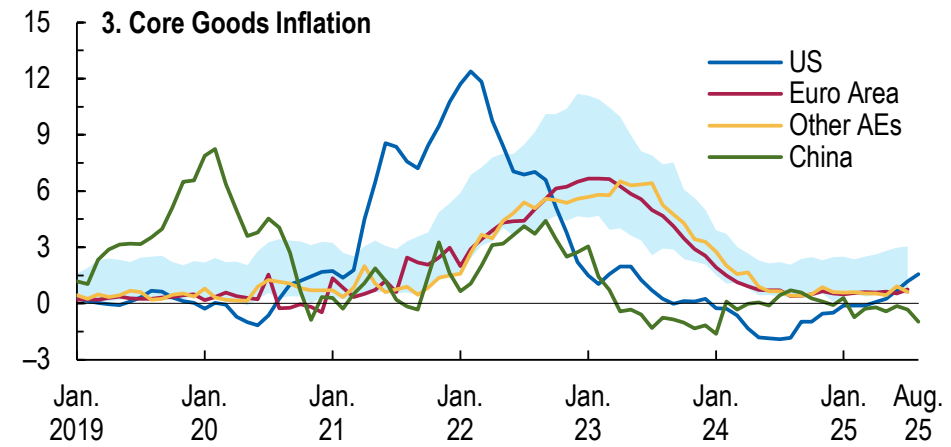

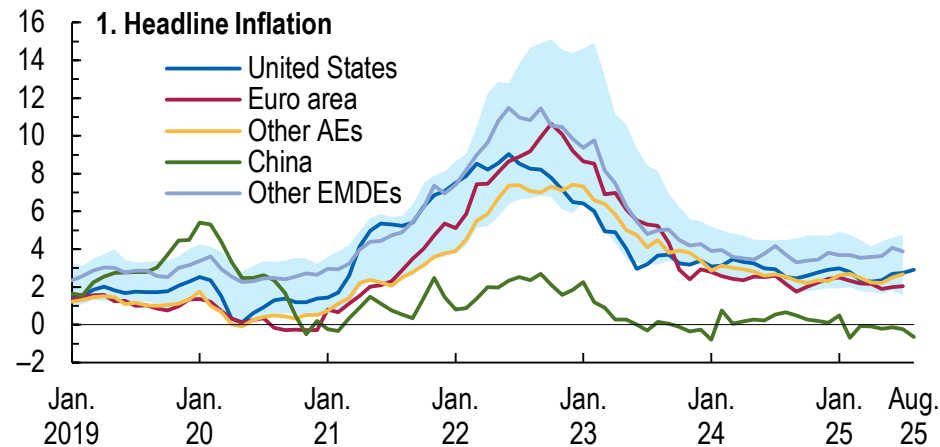

Sources: Ghironi and Ozhan, forthcoming; and IMF staff calculations.

Note: Figure shows impulse responses of selected variables for the tariff-imposing economy to a tariff-uncertainty shock. Solid lines show a shock that materializes in the first quarter ("realized uncertainty"), and dashed lines show a news shock announced in the first quarter that materializes in the fourth quarter. Inflation is annualized.

Inflation Globally Stable, Rising in the US?

Global Inflation Trends (Percent, year over year)

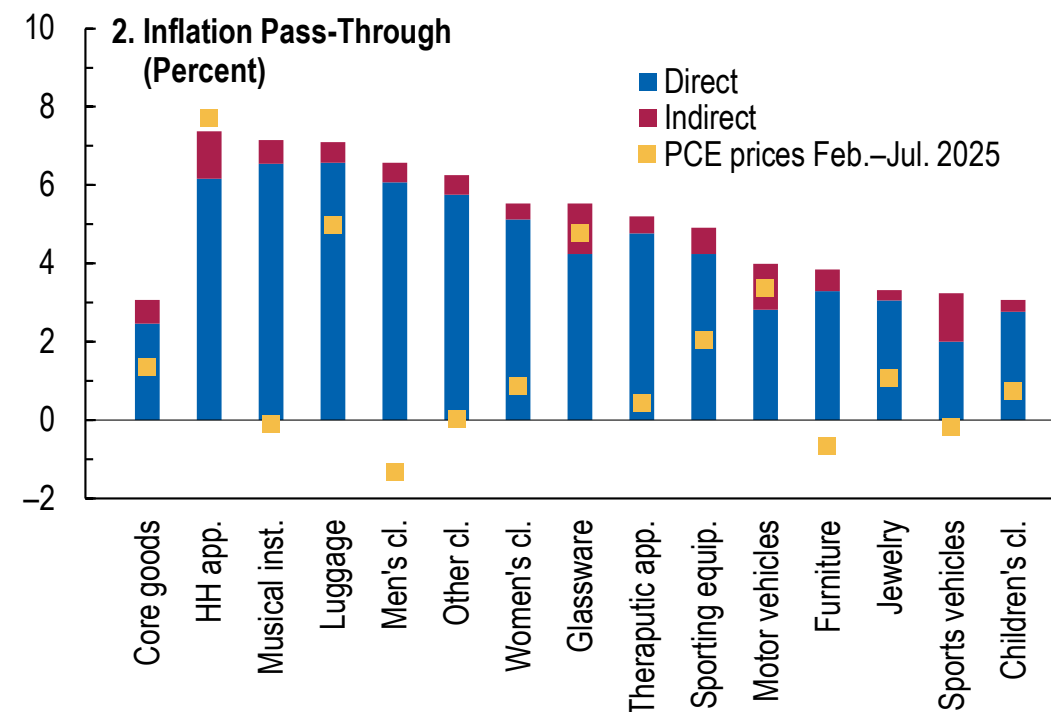

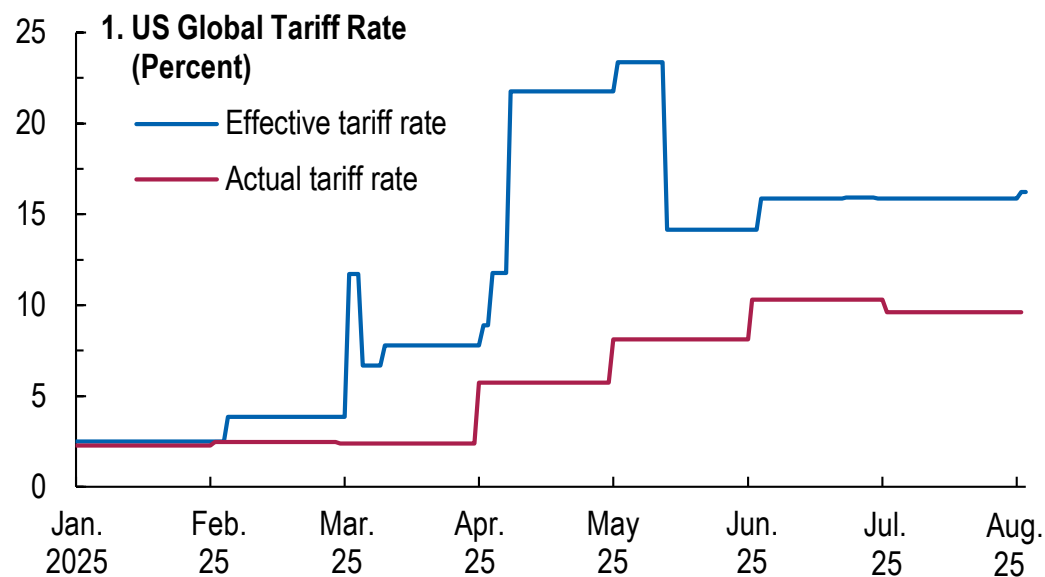

Sources: Haver Analytics; and IMF staff calculations.

Note: Panels 1 and 2 plot the median of a sample of 57 economies that account for 78 percent of the 2024 world GDP (in weighted purchasing-power-parity terms) in the *World Economic Outlook*. The bands depict the 25th to 75th percentiles of data across economies. "Core inflation" is the percent change in the consumer price index for goods and services, excluding food and energy (or the closest available measure). AEs = advanced economies; EMDEs = emerging market and developing economies.

Pass-Through of Tariffs to US Consumer Prices Not Complete

Impact of Tariffs on Prices

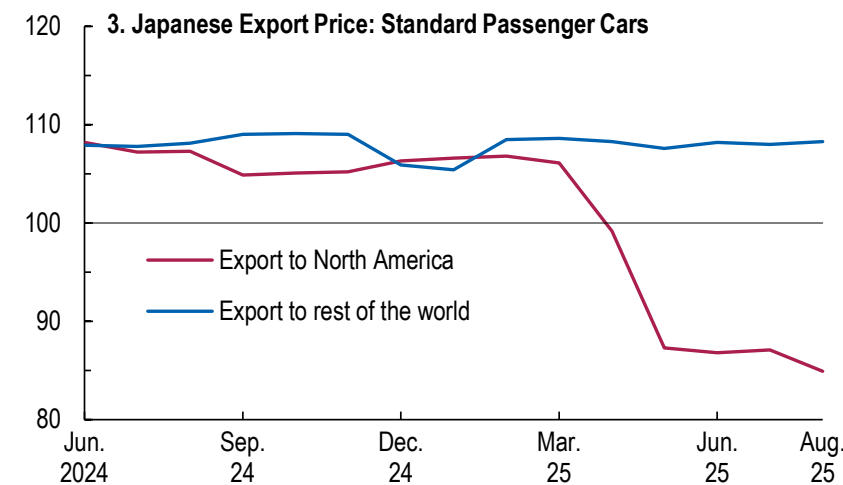

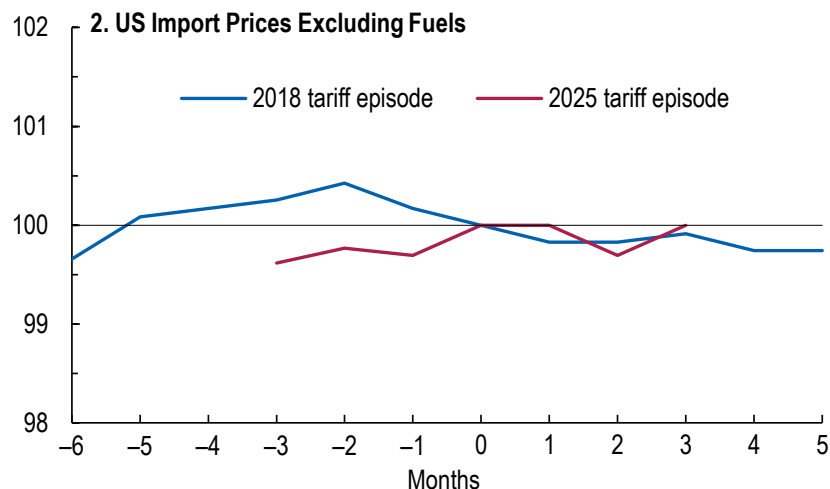

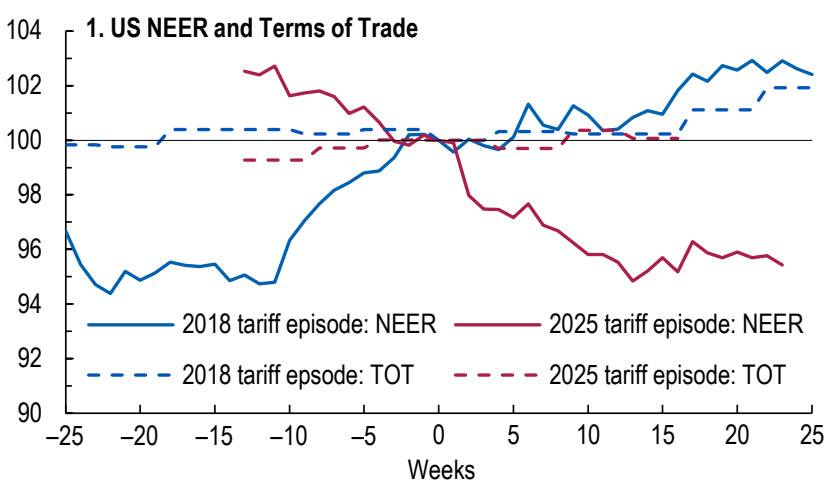

Sources: Haver Analytics; US International Trade Commission; WTO-IMF Tariff Tracker; and IMF staff calculations.

Note: In panel 1, actual tariff rate is the actual duty paid on imports at customs as a share of the value of imports, and the effective tariff rate is a weighted average of announced statutory rates using pre-tariff (hence, pre-substitution) import weights. Actual rate may be biased downward if a product is misclassified or under-invoiced or if tariffs are prohibitively high. In panel 2, the full pass-through is estimated using country- and product-specific tariffs and direct and indirect import intensities from the input-output tables and personal consumption expenditure (PCE) bridge. The estimates assume that margins are unchanged and there are no offsetting effects from factors such as the exchange rate. app. = appliances; cl. = clothing; equip. = equipment; HH = household; inst. = instruments; WTO = World Trade Organization.

USD Depreciation Limits the Space for Importers to Absorb Tariffs

Tariffs, US Dollar, and Prices (Index)

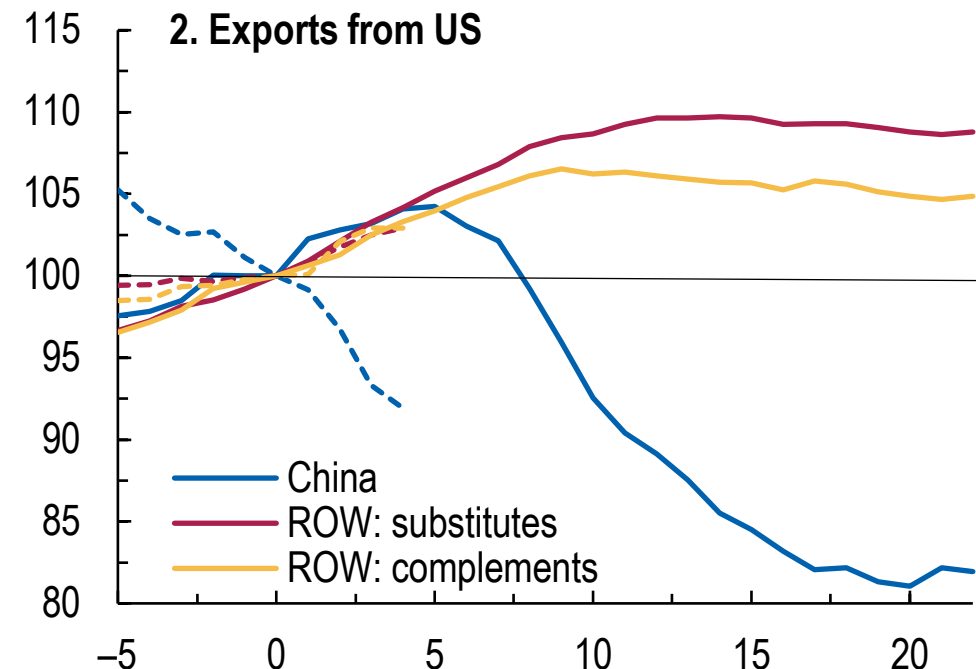

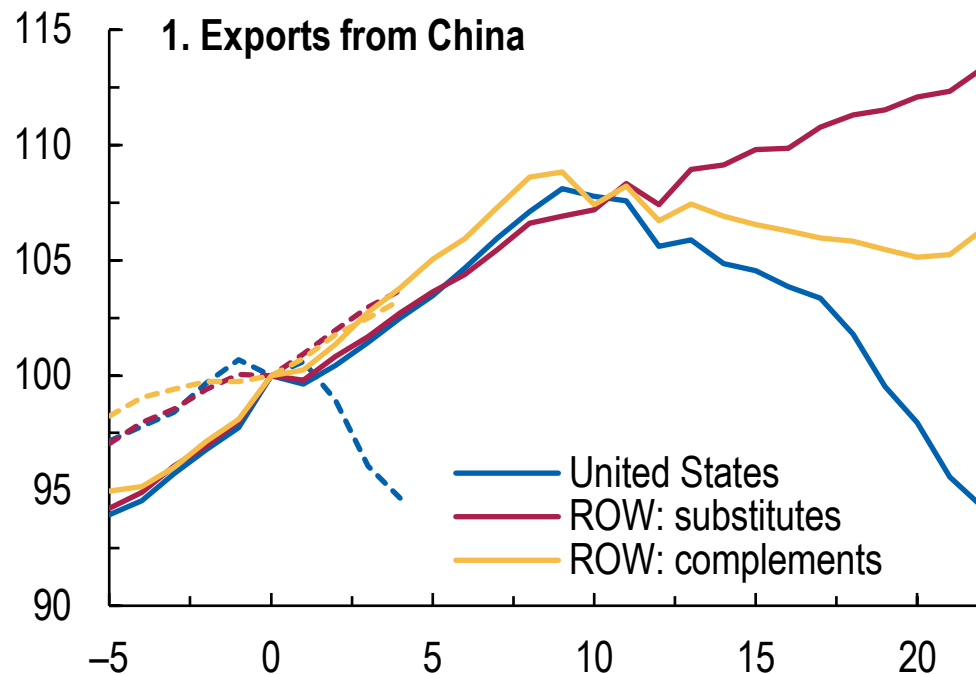

Sources: Bank of Japan; Federal Reserve Board; US Bureau of Labor Statistics; and IMF staff calculations..

Note: In panels 1 and 2, week and month 0 for the 2018 tariff episode correspond to the week and month of July 6, when the US imposed a 25 percent tariff on \$34 billion in Chinese goods, and China implemented a 25 percent tariff on \$34 billion in US goods. For the 2025 tariff episode, week and month 0 correspond to April 4, following the April 2 "Liberation Day" announcement. In panel 2, the import prices include the transaction value of the goods and the value of services performed to deliver the goods from the border of the exporting country to the border of the importing country, hence they include cost, insurance, and freight but not tariffs. In panel 3, the base year is 2020, and the exports are recorded at border values. NEER = nominal effective exchange rate; TOT = terms of trade.

Trade Reallocation in Response to Tariffs: Will This Time Be Different?

Exports by Destination Country Type and Tariff Episode

(Index, Feb. 2018 and Feb. 2025 = 100; solid = Feb. 2018 tariff episode, dashed = Feb. 2025 tariff episode)

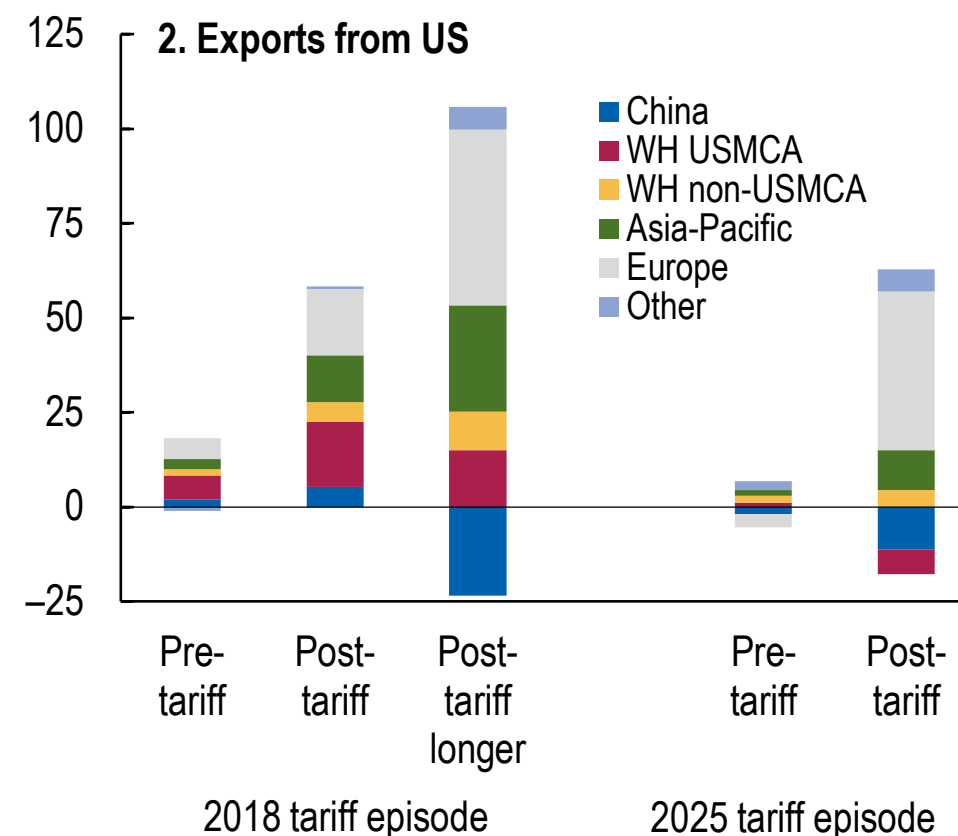

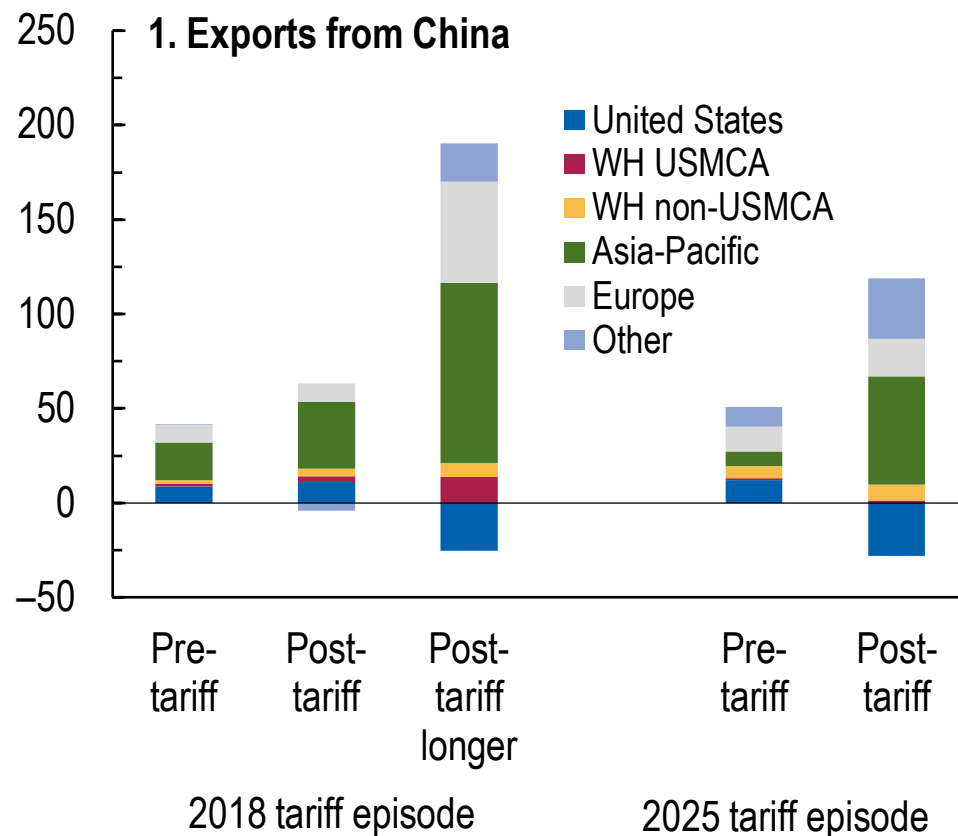

Sources: Fajgelbaum and others 2024; Trade Data Monitor; and IMF staff calculations.

Note: X-axis value 0 corresponds to the tariff start dates February 2018 and February 2025, respectively. Each series is normalized to its respective date 0, at which the value equals 100. Countries are classified as substitutes or complements to China based on how their exports respond to tariffs on Chinese goods. Substitutes (complements) are countries whose exports increase (decrease) when Chinese exports are taxed, reflecting positive (negative) substitution elasticity with respect to China. See Fajgelbaum and others (2024) for details. Changes are calculated using 12-month rolling sums to smooth seasonal fluctuations. ROW = rest of the world.

Trade Reallocation in Response to Tariffs: Will This Time Be Different?

Change in Exports by Destination Region and Tariff Episode
(Billions of US dollars)

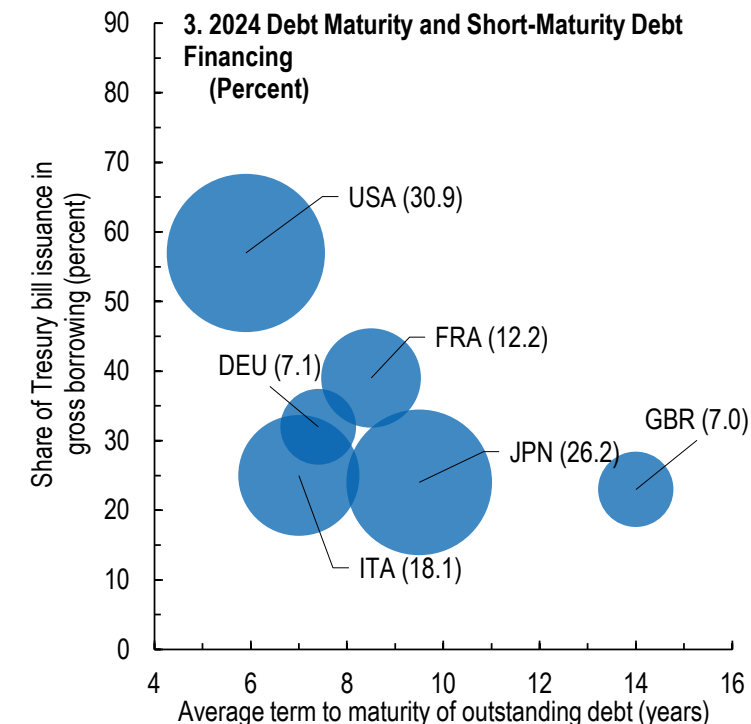

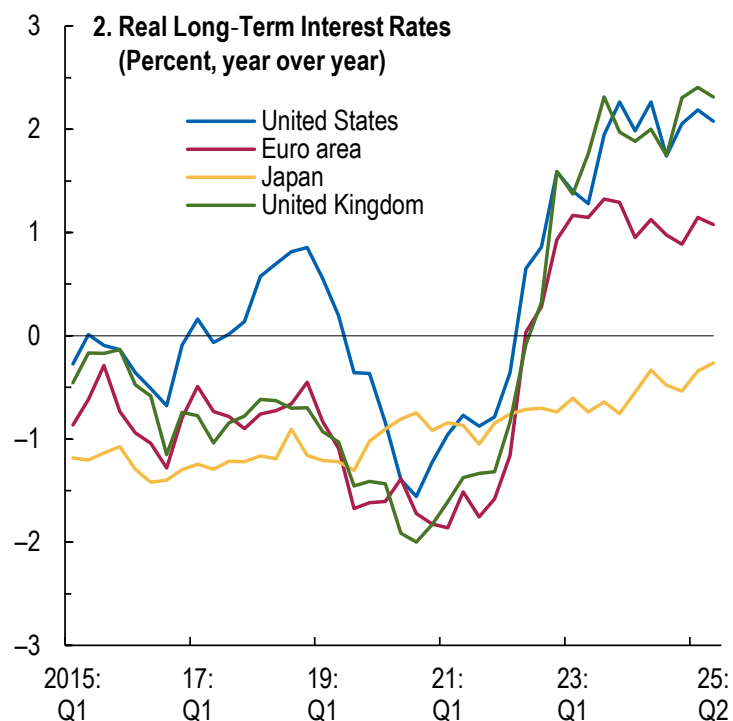

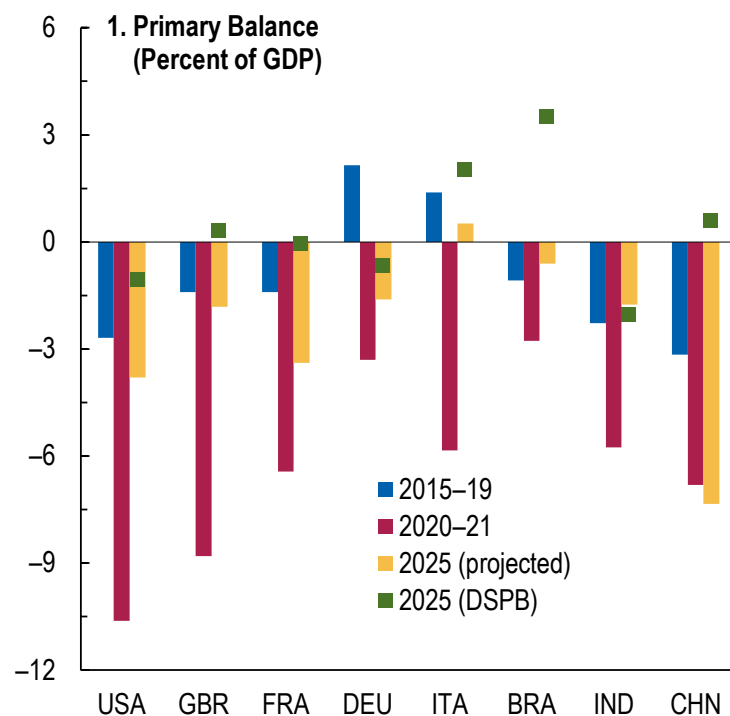

Sources: Trade Data Monitor; and IMF staff calculations.

Note: Bars show the total change in exports within each tariff period (2018 and 2025, respectively). Segments indicate contributions from each destination market. Changes are calculated using 12-month rolling sums to smooth seasonal fluctuations. "Pre-tariff" refers to the change from $t - 3$ months to $t - 1$; "Post-Tariff" refers to the change from $t = 0$ to $t + 3$ months; and "Post-tariff longer" refers to the change from $t = 0$ to $t + 22$ months (available for 2018 only). USMCA = U.S.-Mexico-Canada Agreement; WH = Western Hemisphere.

Fiscal Policy Remains Loose in Many Large Economies

Fiscal Policy

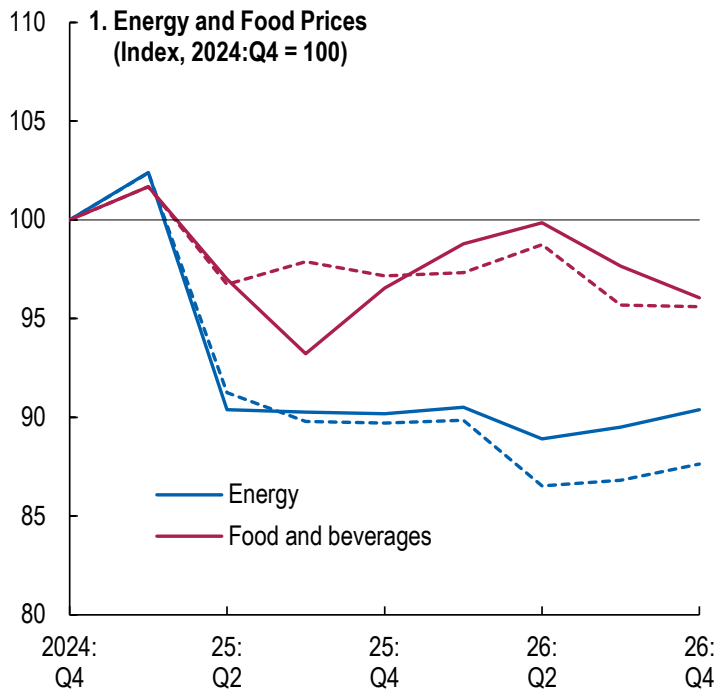

Sources: Consensus Economics; Eurostat; Organisation for Economic Co-operation and Development; and IMF staff calculations.

Note: In panel 1, the debt-stabilizing primary balance (DSPB) is calculated as the primary balance required to stabilize the debt given projected effective interest rate on debt and GDP growth, and accounting for stock-flow adjustments. In panel 2, the real long-term interest rate is calculated as the nominal yield on 10-year government bonds minus 10-year-ahead expected inflation from Consensus Economics. In panel 3, bubble size and labels refer to countries' refinancing requirements as a share of GDP. Country labels in the figure use International Organization for Standardization (ISO) codes.

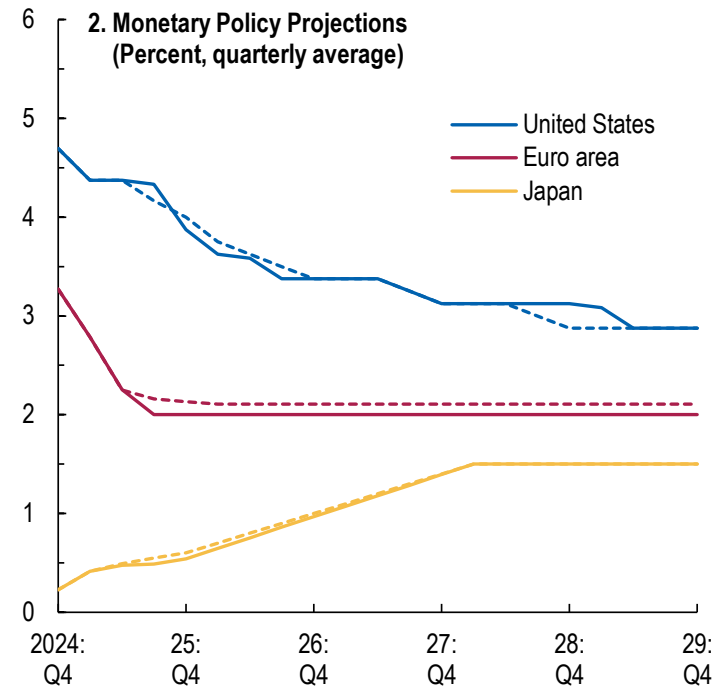

The Outlook: Dim Prospects

Assumptions for the Baseline Forecast

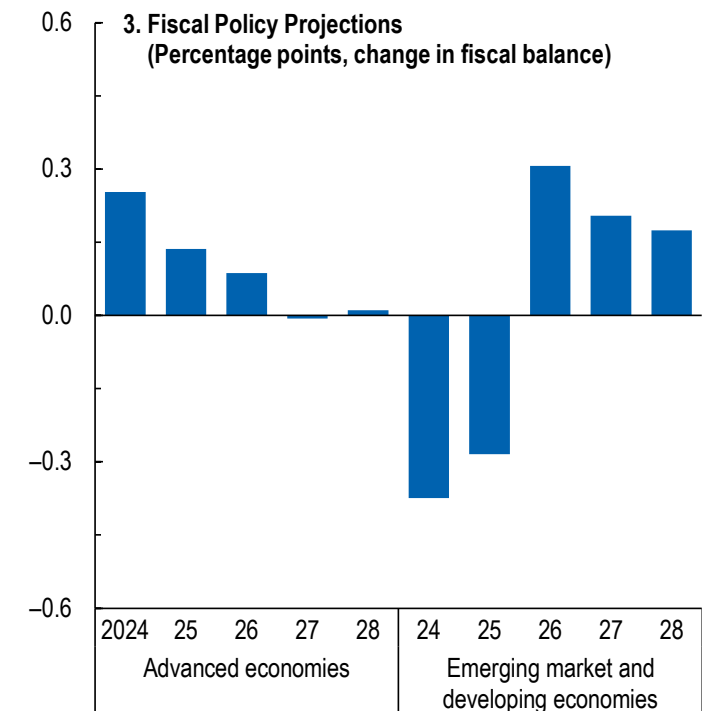

Commodity: Slowdown in energy, increase in nonfuel

Monetary policy: Slower than expected convergence in US, faster in EA

Fiscal policy: Consolidation expected in AEs, lagged in EMs

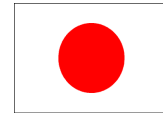

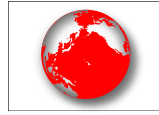

Source: IMF staff calculations.

Note: In panels 1 and 2, solid lines denote projections from the October 2025 *World Economic Outlook* (WEO) and dashed lines those from the April 2025 WEO. In panel 3, the fiscal balance used is the general government structural primary balance in percent of potential GDP. The structural primary balance is the cyclically adjusted primary balance excluding net interest payments and corrected for a broader range of noncyclical factors such as changes in asset and commodity prices.

Source: IMF, October 2025 *World Economic Outlook*.

Note: Commodity Exporting Economies includes 51 emerging market and developing economies.

Revisions to 2025 Growth and Inflation Vary Across Countries

Changes in GDP Growth and Inflation (Percentage points)

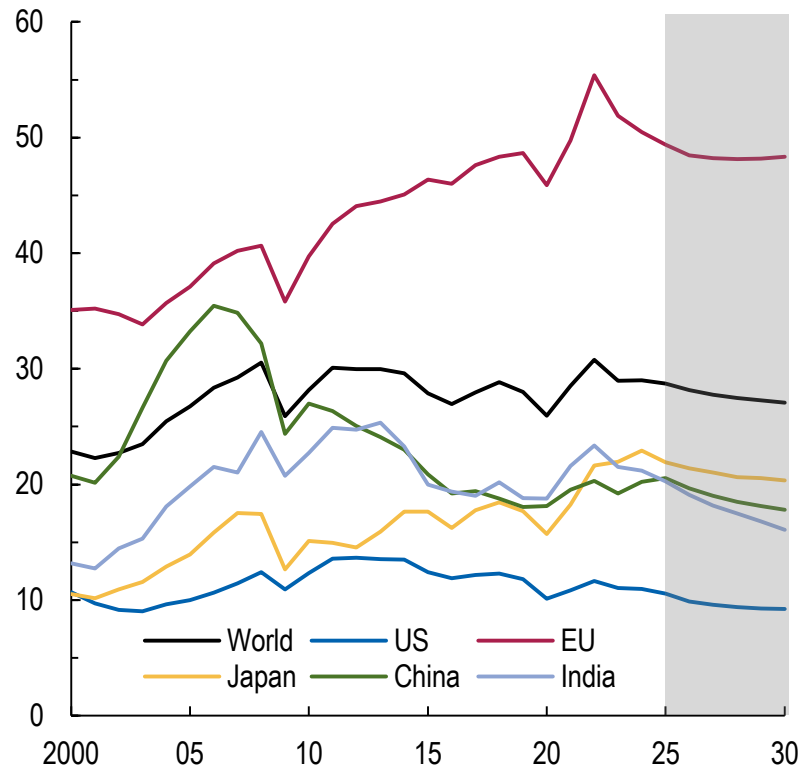

Source: IMF staff calculations.

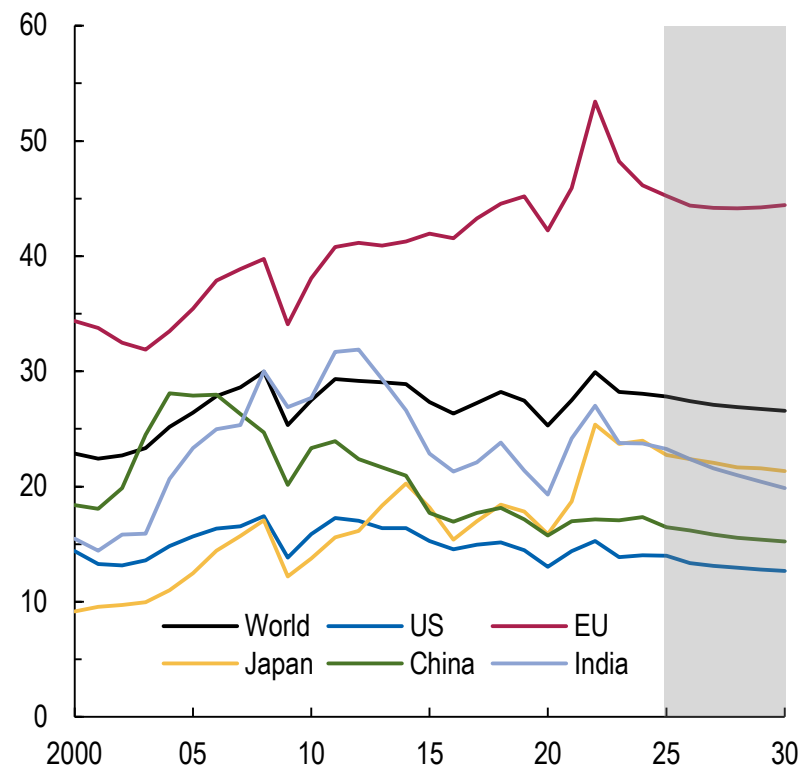

Note: AEs = advanced economies; EMDEs = emerging market and developing economies; WEO = *World Economic Outlook*.

World Trade and External Balances Evolve with Policy Shifts

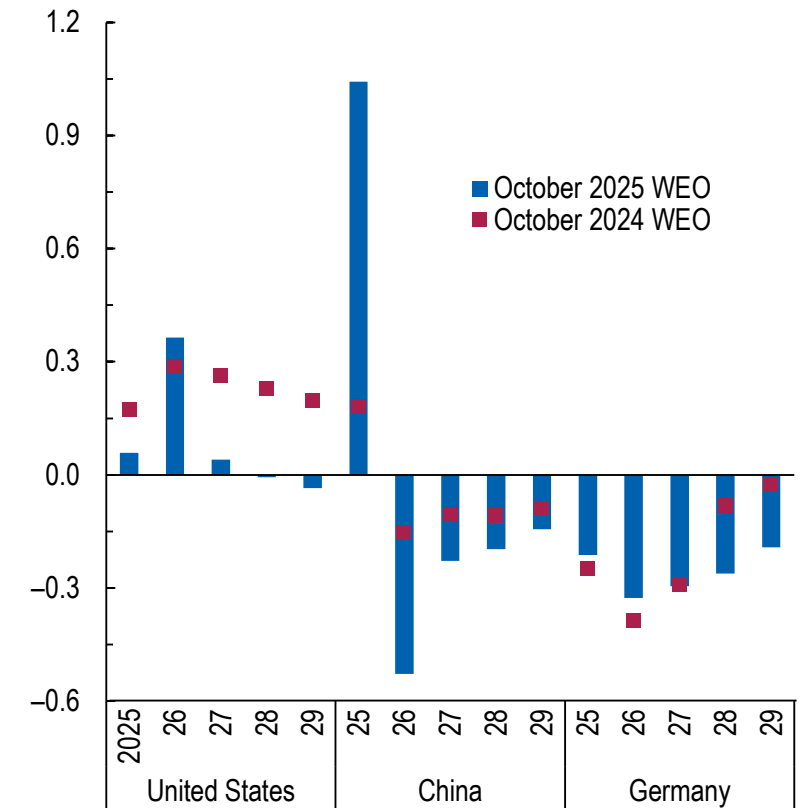

Exports of Goods and Services
(Percent of GDP)

Imports of Goods and Services
(Percent of GDP)

Projected Change in Current Account Balance
(Percentage Points)

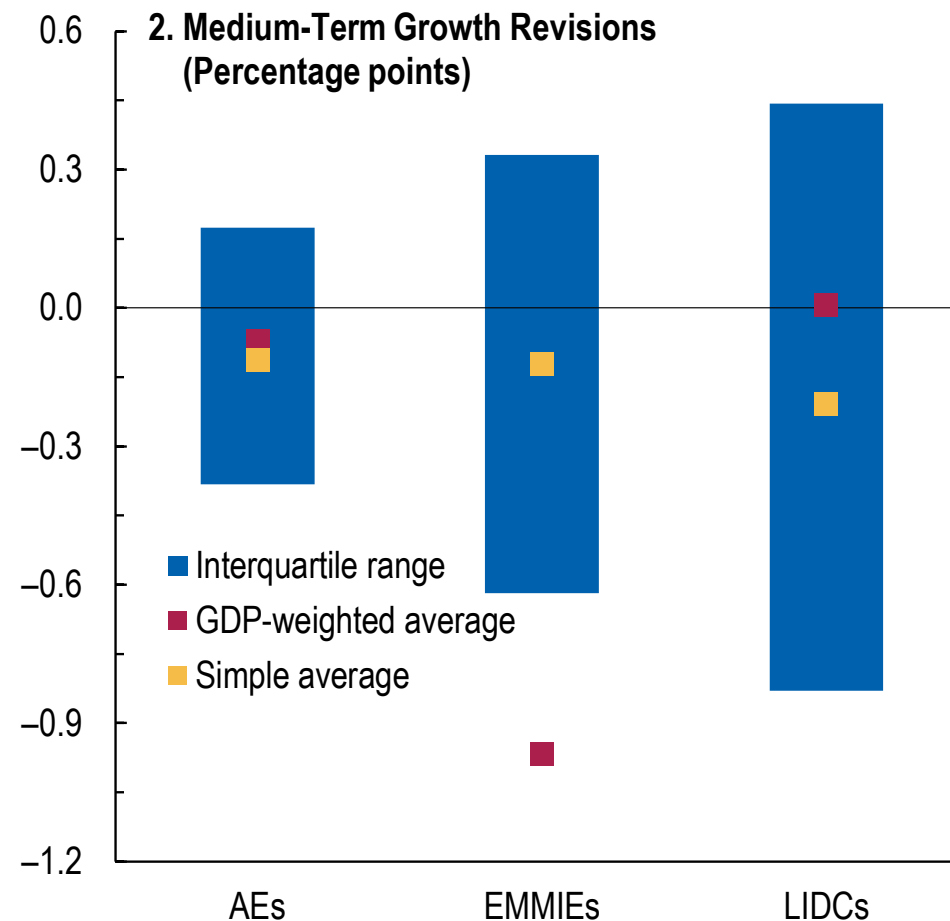

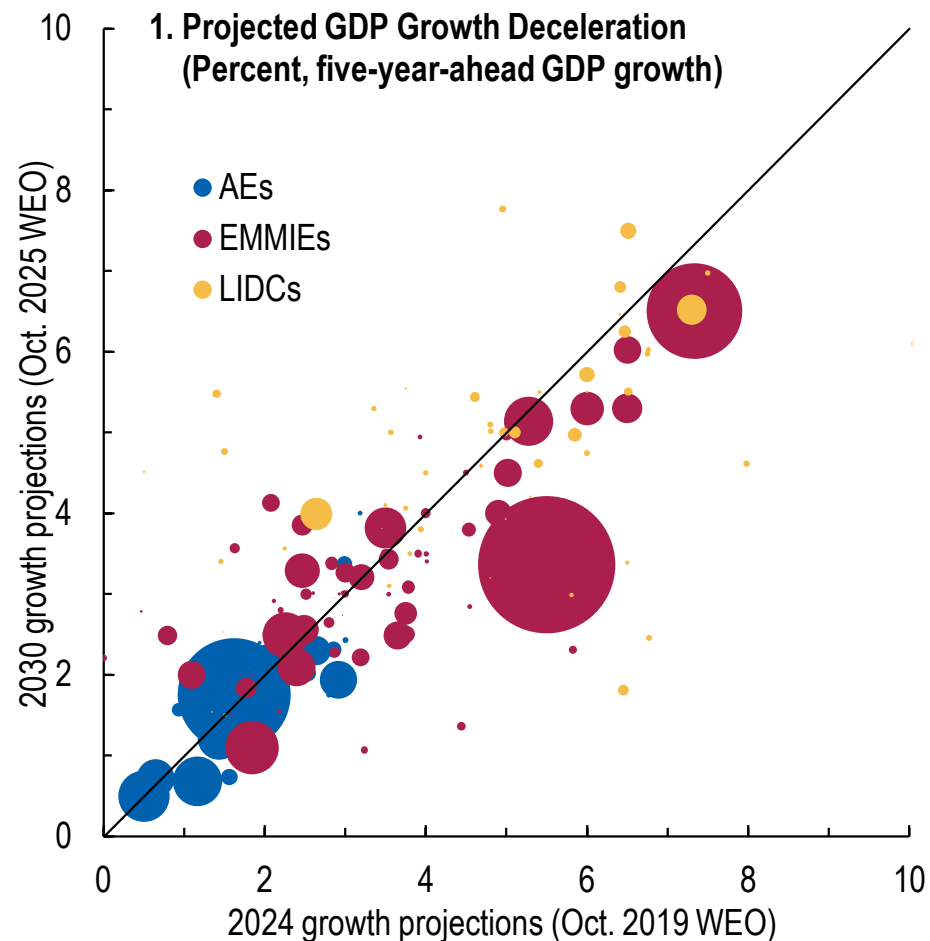

Source: IMF staff calculations.

Note: In the first two panels, shaded area represents forecasts. European Union (EU) data include both intra- and extra-EU trades. In the third panel, each data point shows difference from previous year of current account balance in percent of GDP series in respective WEOs. WEO = *World Economic Outlook*.

Medium-Term Prospects Remain Dim

Medium-Term Growth Outlook

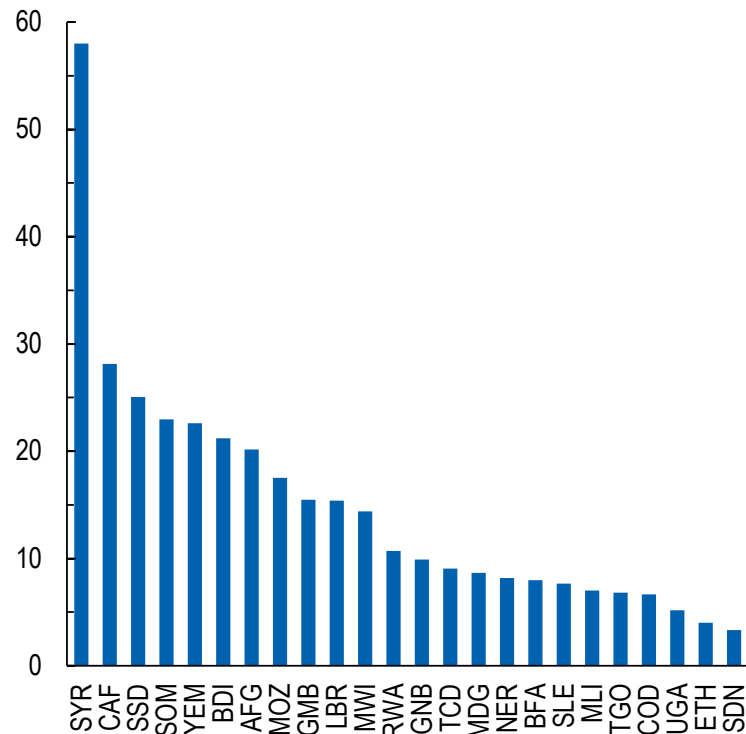

Source: IMF staff calculations.

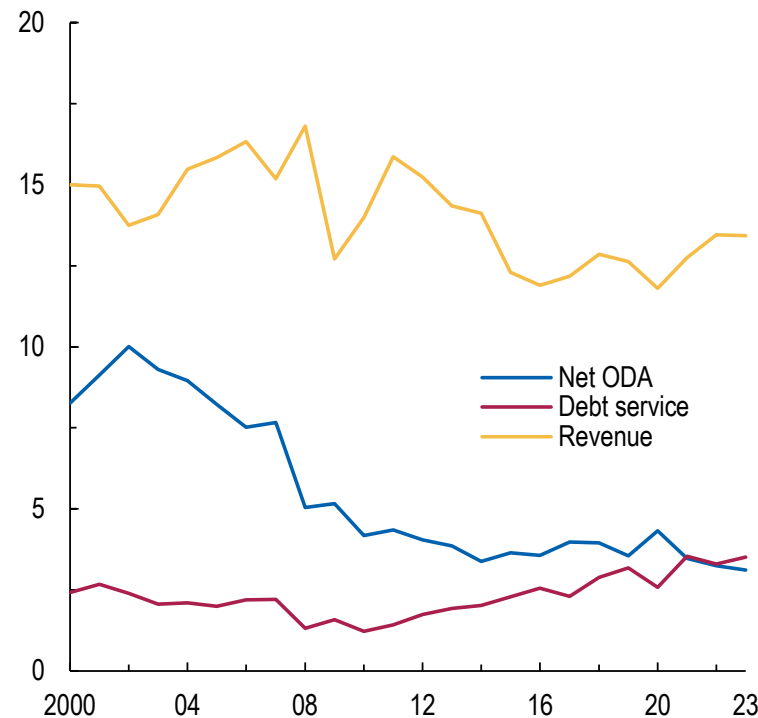

Note: In panel 1, bubble sizes are based on 2030 GDP at purchasing power parity in October 2025 WEO. In panel 2, the medium-term growth revisions are defined as 2030 real GDP growth from October 2025 WEO minus 2024 growth from October 2019 WEO. AEs = advanced economies; EMMIEs = emerging market and middle-income economies; LIDCs = low-income developing countries; WEO = *World Economic Outlook*.

Aid Reductions and Immigration Restrictions Cast a Shadow

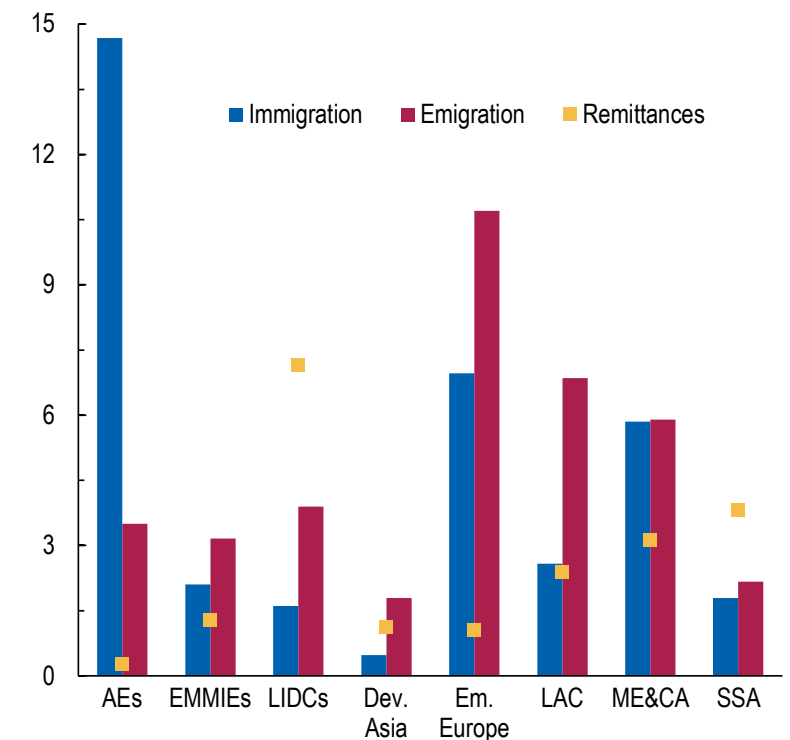

ODA in Percent of GNI in 2023
(Percent)

ODA, Debt Service, and Revenue of LIDCs
(Percent)

Migrant Stock and Remittances
(Percent)

Sources: Organisation for Economic Co-operation and Development; United Nations, *International Migrant Stock 2024*; World Bank, *World Development Indicators*; and IMF staff calculations.

Note: In the first panel, data labels in the figure use International Organization for Standardization (ISO) country codes. In the second panel, net ODA and debt service are weighted by and shown as percentages of GNI and revenue is weighted by and shown as percentage of GDP. Revenue excludes grants. In the third panel, immigrants are expressed as a percentage of the destination population, emigrants of the origin population, and remittances as a percentage of GDP in US dollars. AEs = advanced economies; Dev. Asia = developing Asia; Em. Europe = emerging Europe; EMMIEs = emerging market and middle-income economies; GNI = gross national income; LAC = Latin America and the Caribbean; LIDCs = low-income developing countries; ME&CA = Middle East and Central Asia; SSA = sub-Saharan Africa; ODA = official development assistance.

Risks: Tilted to the Downside

Risks to the Outlook

Downside

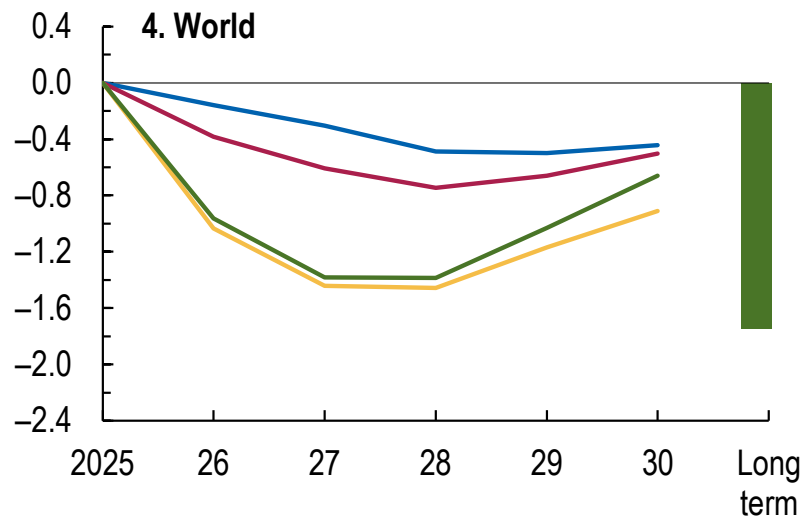

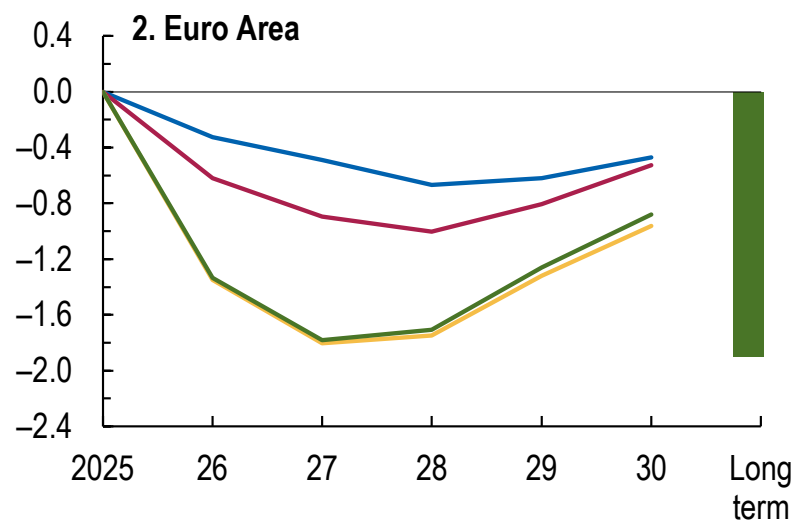

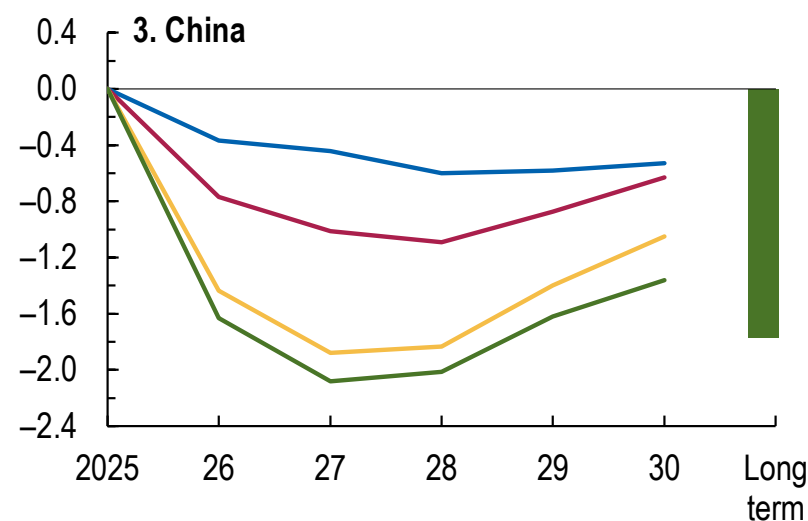

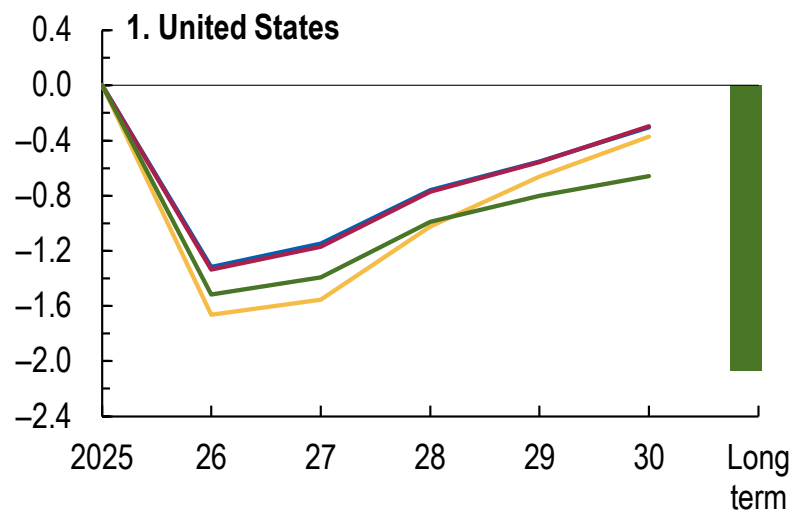

- **Prolonged trade policy uncertainty and ratcheting up of protectionist trade measures**
- **Shocks to labor supply**
- **Fiscal vulnerabilities, financial market fragilities, and their interactions**
- **Repricing of new technologies**
- **Eroding good governance and institutional independence**
- **Renewed spikes in commodity prices**

Upside

- **Breakthrough in trade negotiations, leading to lower tariffs and improved policy predictability**
- **A faster pace of structural reforms**
- **Artificial intelligence reigniting productivity growth**

An Illustrative Scenario Quantifies Possible Impact

Impact of Scenario A on GDP (Percent deviation from baseline)

- Higher tariffs and supply disruptions
- Add inflation expectations shock
- Add higher sovereign yields/financial conditions
- Add lower demand for US assets

Source: IMF staff estimates.
Note: "Long term" is at least 50 years ahead.

Policies: Bringing Confidence, Predictability, and Sustainability

Policy Priorities for Near and Longer Term

Anchoring Trade in Predictable Rules

- **Removing trade policy uncertainty**
- **Modernizing trade rules and cooperating to lower barriers**
- **Pairing trade diplomacy with macroeconomic adjustment**

Rebuilding Fiscal Buffers and Safeguarding Debt Sustainability

- **Restoring buffers**
- **Ensuring debt sustainability**

Policies for Severe Shock Mitigation

- **Wider use of scenario analysis to strengthen policy readiness and credibility**
- **Plausible scenarios spanning macroeconomic and financial risks**

Monetary Policy Priorities: Tailored, Transparent, Independent

- **Calibrating monetary policy to country circumstances**
- **Clear central bank communication**
- **Independence and credibility as pillars of stability**
- **Tackling excessive exchange rate volatility**
- **Preserving macrofinancial stability**

Policies with Medium-Term Impact

- **Disciplined use of industrial policy**
- **Implementing structural reforms**
- **Addressing climate change efficiently**
