

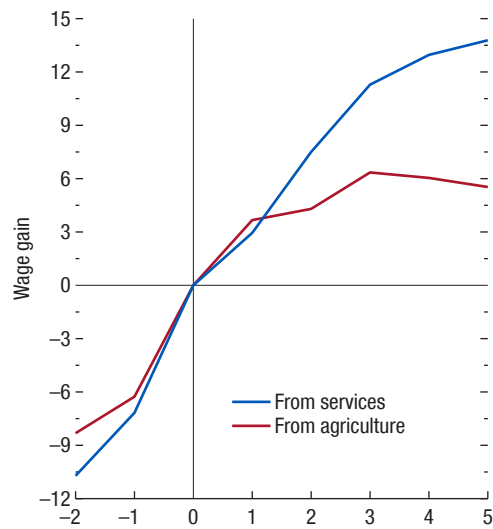

### Figure 3.3.3. Wages of Workers Switching to Manufacturing Jobs

(Wage relative to level at time of switching sectors, percentage points)

Source: Calculations from Alvarez (2017) using Relação Anual de Informações Sociais panel data on formal workers. Note: The figure shows the average relative wage of individual workers who shifted to manufacturing jobs (relative to their wage level at the time of the transition), controlling for time and worker fixed effects. X-axis labels indicate the number of years before and after switching sectors (1 = first year in new sector).
