2010	98.3	101.7	91.6	104.0	79.8	74.7

Note: Components may not sum exactly to totals because of rounding.

¹Consists of member countries that are participants in the SDR Department. At the end of FY2010, of the total SDRs allocated to participants in the SDR Department (SDR 204.0 billion), SDR 3.5 billion was not held by participants, but instead by the IMF and prescribed holders. In accordance with the provisions of the Fourth Amendment of the IMF's Articles of Agreement, SDRs held in escrow on behalf of participants with overdue obligations amounted to SDR 86.7 million.

²Based on IFS classification (International Monetary Fund, *International Financial Statistics*, various years). Prior to 2009, advanced economies were classified under "Industrial Countries."

³For net creditor countries, their holdings of SDRs are more than their cumulative allocations of SDRs. For net debtor countries, their holdings of SDRs are less than their cumulative allocations of SDRs.

Appendix Table II.9

De facto classification of exchange rate arrangements and monetary policy frameworks. end-April 2010

The classification system is based on the members' actual, de facto arrangements, as identified by IMF staff, which may differ from their officially announced, de jure arrangements. The system classifies exchange rate arrangements primarily on the basis of the degree to which the exchange rate is determined by the market rather than by official action, with market-determined rates being on the whole more flexible than those that are not. It distinguishes between hard pegs (such as exchange arrangements with no separate legal tender and currency board arrangements); soft pegs. including conventional pegged arrangements, pegged exchange rates within horizontal bands, crawling pegs, stabilized arrangements, and crawl-like arrangements; floating regimes (such as floating and free floating); and a residual category, other managed. The table presents members' exchange rate arrangements against alternative monetary policy frameworks in order to highlight the role of the exchange rate in broad economic policy and to illustrate that different exchange rate regimes can be consistent with similar monetary frameworks. The monetary policy frameworks listed are as follows:

Exchange rate anchor

The monetary authority buys or sell foreign exchange to maintain the exchange rate at its predetermined level or within a range. The exchange rate thus serves as the nominal anchor or intermediate target of monetary policy. These frameworks are associated with exchange rate arrangements with no separate legal tender, currency board arrangements, pegs (or stabilized arrangements) with or without bands, crawling pegs (or crawl-like arrangements), and other managed arrangements.

Monetary aggregate target

The monetary authority uses its instruments to achieve a target growth rate for a monetary aggregate, such as reserve money, M1, or M2, and the targeted aggregate becomes the nominal anchor or intermediate target of monetary policy.

Inflation-targeting framework

This involves the public announcement of numerical targets for inflation, with an institutional commitment by the monetary authority to achieve these targets, typically over a medium-term horizon. Additional key features normally include increased communication with the public and the markets about the plans and objectives of monetary policymakers and increased accountability of the central bank for achieving its inflation objectives. Monetary policy decisions are often guided by the deviation of forecasts of future inflation from the announced inflation target, with the inflation forecast acting (implicitly or explicitly) as the intermediate target of monetary policy.

Other

The country has no explicitly stated nominal anchor, but rather monitors various indicators in conducting monetary policy. This category is also used when no relevant information on the country is available.

Appendix Table II.9

(concluded)

¹Includes countries that have no explicitly stated nominal anchor, but rather monitor various indicators in conducting monetary policy.

²The member participates in the European Exchange Rate Mechanism (ERM II).

³The exchange rate arrangement was reclassified retroactively, overriding a previously published classification.

⁴The de facto monetary anchor is the U.S. dollar.

⁵The de facto monetary anchor is a composite.

⁶The central bank has taken preliminary steps toward inflation targeting and is preparing for the transition to full-fledged inflation targeting.
