

Financial flows to CEE: developments and outlook

Kitzbühel, January 10, 2014

James Roaf

Senior Resident Representative

IMF Regional Office for Central and Eastern Europe, Warsaw

Outline

- Macro backdrop
- Recent developments in financial flows
- Prospects for flows
 - mostly positive push-pull factors...
 - ...but banking considerations
- Conclusions

Recovery in prospect

Recovery in prospect

Recovery in prospect

Monetary tightening in train...

...as uncertainty recedes

Capital flows have stalled

Note: No data for Slovakia 2013Q2.

Capital flows have stalled

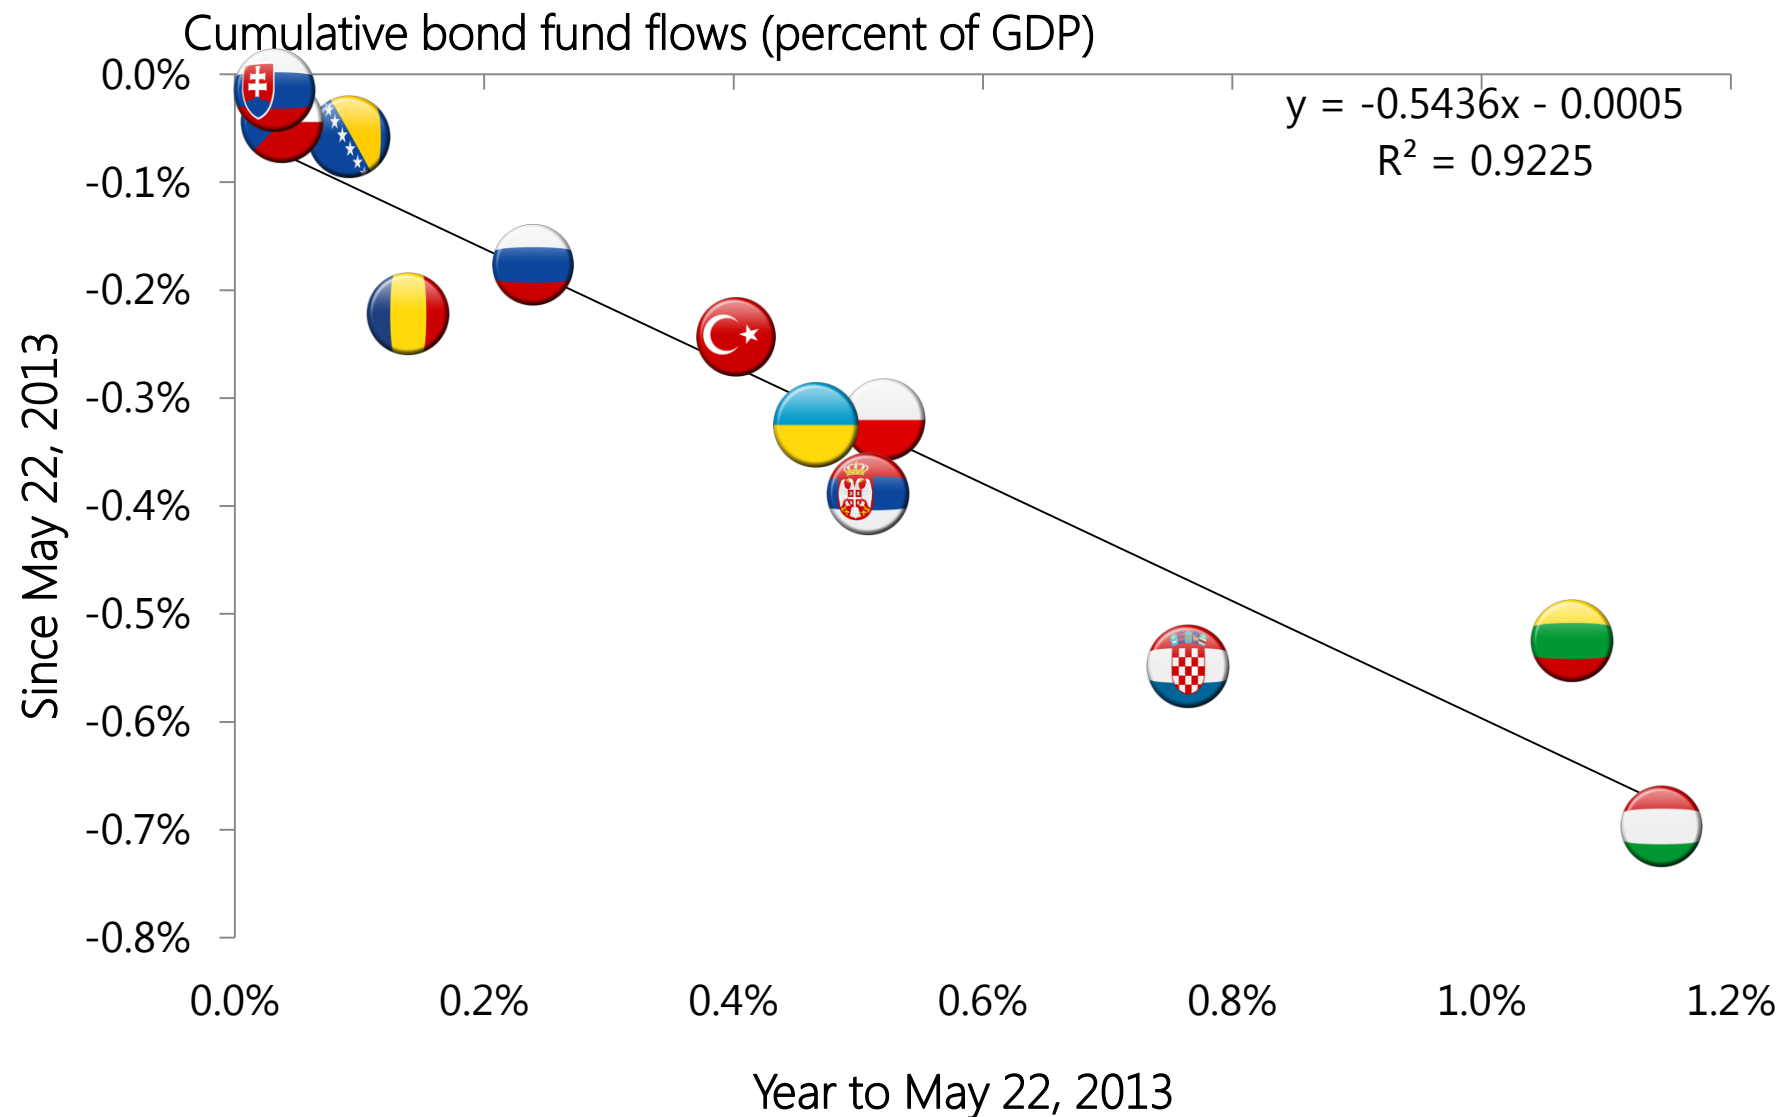

Note: Data for Montenegro starts in 2007, for Serbia in 2008, for Kosovo in 2009. No data for Serbia 2013Q2.

Bond flows reversed after tapering announcement...

Note: Excluding Russia and Turkey.

...strongly offsetting post-OMT surge.

Yields reaction to tapering similar to peers.

Push and pull factors seem favorable...

Factor	Expected effect on inflows	Prospects for CEE
Push		
Global risk aversion	-	✓
Global interest rates	-	(✓)?
Global growth	+?	(✓)?
Pull		
Growth	+	(✓)
External position	+	✓
Fiscal position/rating	+	(✓)
Openness	+	✓
Exchange rate volatility	-	(✓)
Business environment	+	✓/✗

...but deleveraging still a critical factor in CEE...

...affecting credit growth...

This heatmap illustrates the annual percentage change in GDP per capita for 18 European countries between 2005 and 2013. The color intensity indicates the growth rate, with blue representing negative growth and red representing positive growth.

Country	2005	2006	2007	2008	2009	2010	2011	2012	2013
Estonia	Red	Red	Red	Red	Green	Blue	Blue	Blue	Blue
Latvia	Red	Red	Red	Red	Green	Blue	Blue	Blue	Blue
Lithuania	Red	Red	Red	Red	Green	Blue	Blue	Blue	Blue
Czech Rep.	Green	Green	Green	Green	Green	Green	Green	Green	Green
Hungary	Green	Green	Green	Green	Green	Blue	Blue	Blue	Blue

Ukraine	Green	Red	Red	Red	Green	Blue	Blue	Blue	Blue

Funding reliant on deposits...

CESEE excl. Russia and Turkey: Evolution of Main Bank Funding Sources
(Percent of GDP, 4-quarter moving average, exchange-rate adjusted)

Note: Excludes Montenegro and Kosovo because of data unavailability.

Sources: BIS, Locational Banking Statistics; IMF, International Financial Statistics; IMF, World Economic Outlook; and IMF staff calculations.

...as demand for credit strengthens

Demand and Supply Conditions, Past Developments and Outlook

(Net percentages: negative supply-side values indicate a tightening of credit standards and positive demand-side values indicate an increase of demand)

Reported supply factors

- Regulatory changes locally and at EU level a constraint
- Funding availability not a widespread independent pressure point
- Local economic and banking outlooks expected to help ease lending conditions
- High NPLs a constraint

Crisis legacies still in play

Conclusions

- Underlying conditions quite favorable for pick-up in inflows to CEE
- But banking factors will still dominate
- More discrimination on destination of flows
- Policies need to focus on conducive environment for investment (macro, structural)...
- ...as well as tackling NPLs and establishing macroprudential policy frameworks

Thank you
