Figure 1.19. Risks to the Global Outlook

A fan chart analysis suggests that risks to the global growth outlook remain skewed to the downside.

1. Prospects for World GDP Growth
   (Percent change)

   - WEO baseline
   - 90 percent confidence interval
   - 70 percent confidence interval
   - 50 percent confidence interval
   - 90 percent confidence interval from October 2016 WEO
   - 90 percent confidence interval from April 2016 WEO

2. Balance of Risks Associated with Selected Risk Factors
   (Coefficient of skewness expressed in units of the underlying variables)

   - Balance of risks for Term spread
   - Balance of risks for S&P 500
   - Balance of risks for Inflation risk
   - Balance of risks for Oil market risks

3. Dispersion of Forecasts and Implied Volatility
   - GDP (right scale)
   - VIX (left scale)

4. Term spread
   - Term spread (right scale)
   - Oil (left scale)

Sources: Bloomberg L.P.; Chicago Board Options Exchange (CBOE); Consensus Economics; Haver Analytics; and IMF staff estimates.

1 The fan chart shows the uncertainty around the April 2017 World Economic Outlook (WEO) central forecast with 50, 70, and 90 percent confidence intervals. As shown, the 70 percent confidence interval includes the 50 percent interval, and the 90 percent confidence interval includes the 50 and 70 percent intervals. See Appendix 1.2 of the April 2009 WEO for details.

2 The bars depict the coefficient of skewness expressed in units of the underlying variables. The values for inflation risks and oil price risks enter with the opposite sign since they represent downside risks to growth.

3 GDP measures the purchasing-power-parity-weighted average dispersion of GDP growth forecasts for the Group of Seven economies (Canada, France, Germany, Italy, Japan, United Kingdom, United States), Brazil, China, India, and Mexico. VIX is the CBOE Standard & Poor’s (S&P) 500 Implied Volatility Index. Term spread measures the average dispersion of term spreads implicit in interest rate forecasts for Germany, Japan, the United Kingdom, and the United States. Oil is the CBOE crude oil volatility index. Forecasts are from Consensus Economics surveys. Dashed lines represent the average values from 2000 to the present.
