Figure 2.18. Domestic Attributes across Persistent Accelerations and Reversals, 1970–2015

Domestic attributes are significantly different between economies that experience a persistent acceleration or reversal and economies that do not.

Source: IMF staff calculations.
Note: The results are robust to a Kolmogorov-Smirnov test of congruence of the distribution of the variable for the two sets of economies. Each variable is measured as the average between t–3 and t–1, where t corresponds to the onset of the episode. ***, **, and * denote significance of an equality test of medians at the 1, 5, and 10 percent.
