Staff Studies for the World Economic Outlook  

September 1995
World Economic and Financial Surveys

This series (ISSN 0258-7440) contains biannual, annual, and periodic studies covering monetary and financial issues of importance to the global economy. The core elements of the series are the World Economic Outlook, published usually in May and October, and the quarterly Global Financial Stability Report. Other studies assess international trade policy, private market and official financing for developing countries, exchange and payments systems, export credit policies, and issues discussed in the World Economic Outlook. Please consult the IMF Publications Catalog for a complete listing of currently available World Economic and Financial Surveys.

World Economic Outlook: A Survey by the Staff of the International Monetary Fund

The World Economic Outlook, published twice a year in English, French, Spanish, and Arabic, presents IMF staff economists’ analyses of global economic developments during the near and medium term. Chapters give an overview of the world economy; consider issues affecting industrial countries, developing countries, and economies in transition to the market; and address topics of pressing current interest.

Official Financing for Developing Countries

by a staff team in the IMF’s Policy Development and Review Department led by Anthony R. Boote and Doris C. Ross

This study provides information on official financing for developing countries, with the focus on low-income countries. It updates the 1995 edition and reviews developments in direct financing by official and multilateral sources.

Trade Liberalization in IMF-Supported Programs

by a staff team led by Robert Sharer

This study surveys recent trends in flows to developing countries through banking and securities markets. It also analyzes the development and currency convertibility of IMF members.

Global Financial Stability Report: Market Developments and Issues

The Global Financial Stability Report, published four times a year, examines trends and issues that influence world financial markets. It replaces two IMF publications—the annual International Capital Markets report and the electronic quarterly Emerging Market Financing report. The report is designed to deepen understanding of international capital flows and explores developments that could pose a risk to international financial market stability.

Trade Liberalization in IMF-Supported Programs

by a staff team led by Robert Sharer

This study assesses trade liberalization in programs supported by the IMF by reviewing multiyear arrangements in the 1990s and six detailed case studies. It also discusses the main economic factors affecting trade policy targets.

Private Market Financing for Developing Countries

by a staff team from the IMF’s Policy Development and Review Department led by Steven Dunaway

This study surveys recent trends in flows to developing countries through banking and securities markets. It also analyzes the institutional and regulatory framework for developing country finance; institutional investor behavior and pricing of developing country stocks; and progress in commercial bank debt restructuring in low-income countries.

Available by series subscription or single title (including back issues); academic rate available only to full-time university faculty and students.

For earlier editions please inquire about prices.
