Figure 4.7. Selected Microeconomic Variables of the Non-Tradable Corporate Sector\(^1\) (Percent)

Leverage and other financial indicators in the non-tradable sector are closely tied to movements in the relative price of non-tradables during boom periods.

Sources: Thomson Analytics; and IMF staff calculations.

\(^1\)A credit expansion in a given country is identified as a boom if it exceeds the standard deviation of that country’s credit fluctuations around its Hodrick-Prescott trend by a factor of 1.75.

\(^2\)Total debt to market value of equity.

\(^3\)Current liabilities defined as liabilities due within one year.

\(^4\)Total interest expense in percent of total debt outstanding.
