Figure 4.17. Aid and FDI Flows to Non-HIPC-Eligible Low-Income Countries
(Median economy; \( t = 1 \) in the first year of a strong or weak growth episode)

Financing by foreign direct investment (FDI) and aid has also increased for low-income countries (LICs) that were not eligible for debt relief under the Heavily Indebted Poor Countries (HIPC) Initiative.

Excluding HIPC-Eligible LICs with:  
- Strong growth
- Weak growth

Before 1990

1. Aid Flows (percent of GDP)

2. Aid Flows (percent of GDP)

3. Aid Flows (millions of current U.S. dollars)

4. Aid Flows (millions of current U.S. dollars)

5. Net FDI Flows (percent of GDP)

6. Net FDI Flows (percent of GDP)

Sources: IMF, Balance of Payments Statistics database; IMF, World Economic Outlook database (October 2012); World Bank, World Development Indicators database (2012); and IMF staff calculations.

Note: Economy groups and indicators are defined in Appendix 4.1. LICs exclude countries experiencing or recovering from a serious external or internal conflict at the start of their takeoffs. See the text for definitions of strong and weak growth episodes (takeoffs are strong growth episodes). See Appendix 4.1 for the definition of conflict and the source of the conflict data. *, **, and *** denote statistically significant difference in distributions (based on the Kolmogorov-Smirnov test) at the 10 percent, 5 percent, and 1 percent levels, respectively. Significance tests on the \( x \)-axis are for the difference in the distributions between the groups of strong and weak growth. Significance tests on the blue bars are for the difference in the distributions across 1990–2011 and before 1990 (not shown for red bars). A constant composition sample underlies each of the panels to ensure comparability within the group of strong and weak growth episodes across time for that panel.
