I. INTRODUCTION

1. At the Executive Board discussion of quota and voice reform in July, which built upon two earlier informal seminars, Directors highlighted the need to make significant further progress in the coming months.² This would **enable the Executive Board to report concrete and substantial progress to the Board of Governors at the Annual Meetings**. It was envisaged that the period leading up to the Annual Meetings would be used to begin to resolve the remaining areas of difference and focus on the main choices that need to be made. In that vein, staff and management were to consider how the views expressed and guidance provided by Directors so far could be built upon to identify more concretely the scope for specific proposals.
2. **Against this background, the present paper makes a relatively narrow range of proposals for the second round reform package.** These proposals seek to build on the areas of agreement that have emerged to date, and make further progress in bridging the remaining gaps. Given the significant differences of view that persist in some areas, the proposals should be viewed as illustrative rather than definitive, and still leave important choices to be made. The intention is to try to move toward the broad consensus necessary for the reform to achieve its goal of strengthening the effectiveness and credibility of the Fund. Achieving this broad consensus will require a continuation of the spirit of flexibility and compromise that has characterized the discussions since the beginning of the current reforms.

II. TOWARDS CONSENSUS—KEY ISSUES

3. **Important progress has been made in the Board discussions that have taken place since the Annual Meetings in Singapore.** In terms of broad objectives, it has been agreed that a goal is to enhance the representation of dynamic economies, many of which are emerging market countries. There is also a growing recognition that the outcome should be an increase in the voting shares of emerging market and developing countries as a whole. While the main focus continues to be on dynamic economies that have become under-represented, such an approach would be consistent with the view that an outcome that increased their shares at the expense of other emerging market and developing countries may not command the needed broad consensus.
4. **Enhancing the voice and participation of low income countries remains a core goal of the reform.** The Board of Governors Resolution No 61-5 approved in Singapore provides for at least a doubling of basic votes, and at a minimum protecting the voting power of low income countries as a group during the two rounds of ad hoc quota increases. An important issue is whether the goal should be more ambitious with a larger increase in basic votes and some rise in low income country voting share. Also, staffing resources for the offices of Executive Directors with the largest number of members have already been increased, and a staff paper will be circulated soon on the issue of an amendment to the

See also *A New Quota Formula Additional Considerations* (2007), and *Quotas—Further Thoughts on a New Quota Formula* (2006).

Articles that would enable each Executive Director elected by a large number of members to appoint more than one Alternate Executive Director.

5. Considerable progress has also been made regarding the quota formula itself.

There is agreement that it should be simple and transparent, consistent with the multiple roles of quotas, produce results that are broadly acceptable to the membership, and be feasible to implement statistically. Beyond that, it is generally agreed that the variables in the formula should be limited to updated and modernized versions of the four variables included in the existing formulas—GDP, openness, variability, and reserves. At the same time, it is recognized that there are some areas where alternative approaches have been considered but there is currently insufficient support for change (e.g., the definitions of openness and variability). These will remain issues for further work, as part of the current reform or beyond. And, as discussed below, measurement of GDP remains a key issue.

6. There has also been a substantial convergence of views on the weights to be given to the quota variables. It is generally agreed that GDP should be the most important, with openness and variability also playing important roles—though views differ on the relative weights of the latter two variables. There also appeared to be a sense, on balance, that reserves should have a relatively small weight.

7. On the measurement of GDP, the July discussion revealed considerable support for the view that PPP GDP should play a role in determining the second round quota increases. The precise nature of that role, however, remains very much open. This issue is closely linked to the question of the calculated quota shares generated by the new formula, and in particular whether the new formula should increase the aggregate calculated quota share of emerging market and developing countries relative to the outcome of the existing quota formulas. There is also an issue of the available data on PPP GDP, which are in the process of being upgraded under the auspices of the International Comparison Program (ICP). Two broad strands appeared to be emerging, around which views were quite divided.

8. One strand sees a role for PPP GDP in the new quota formula, in order to capture the non-financial roles of quotas. Recognizing that quotas also have important financial roles, such an approach would seem best facilitated through the use of a GDP blend variable, involving GDP measured at both market exchange rates and at PPP. The relative weights that could be assigned to market rate and PPP GDP in such a variable remain open. However, as the illustrative simulations presented in previous staff papers have demonstrated, it is difficult to generate an outcome that raises the calculated quota share of emerging market and developing countries as a whole without some use of PPP GDP in the formula, probably combined with compression.³

9. A second strand that emerged in the July discussion would maintain a formula based solely on market rate GDP but add a supplementary filter using PPP GDP. The

³ As illustrated previously, the use of compression alone can also raise the aggregate calculated quota share of emerging market and developing countries but only if it were applied at a level that, based on discussions to date, may not command the necessary broad support.

aim would be to capture emerging market and developing countries whose weight and role in the world economy have been growing but whose position is not yet fully reflected in the quota formula. In this way, it could be viewed as to some extent anticipating a continuation of current growth trends that will over time be captured in a formula based on market rate GDP. Concerns were expressed at the July discussion that a filter would have only a one-time effect. To address these concerns, the possibility of giving the filter more durability could also be explored. One possible approach would be for the Board of Governors Resolution on the second round reforms to include a commitment that PPP GDP would be taken into account when considering quota adjustments for some time into the future.

10. Beyond the above four variables, a further open issue remains the potential role for compression in the formula. Compression does not alter the ranking of members but does narrow the dispersion of calculated quota shares between large and smaller countries. In the July discussion, most Directors favored use of a compression factor as a means of reducing to some degree the influence of economic size in the quota formula. As noted previously,⁴ compression reduces the share of a relatively small group of countries (the seven members with the largest calculated quota shares, of which six are advanced countries), and increases the shares of all other members, both advanced and developing countries. If compression were included, a judgment would need to be made on its level, recognizing that too large a compression factor could make calculated quota shares less reflective of members' relative economic positions.

III. ELEMENTS OF A POSSIBLE APPROACH

11. In light of the above considerations, this section presents a limited range of proposals aimed at exploring the scope for building the needed broad consensus. All the proposals below involve some use of PPP GDP, based on the two strands discussed above. They also result in a shift in voting share away from advanced countries as a group and towards emerging market and developing countries.

12. The proposals are based on several common elements, all of which involve issues that remain open at this stage:

- **Variable weights:** The proposals all involve a new formula with a 50 percent weight on GDP and a 5 percent weight on reserves. Two alternative proposals are considered for openness and variability: weights of 30–25 percent for openness and 15–20 percent for variability, respectively.
- **Size of the second round:** All the proposals are based on an overall increase (first and second round combined) of 10 percent, implying a second round increase of 8.1 percent. While a range of views have been expressed to date on the appropriate size of the second round, it is not clear at this stage whether a smaller increase would

⁴ *Quotas-Further Thoughts on a New Quota Formula* (2006) (paragraphs 28 and 36 and Figure 1).

allow enough room for a significant realignment of shares or that the necessary broad support exists for a substantially larger increase.

- **Allocation of the second round increases:** The proposals assume that second round increases would be allocated to under-represented members under the new quota formula based on achieving a uniform proportionate reduction in the gap between calculated quota shares and pre-Singapore actual quota shares (this approach is consistent with that followed in the first round). As discussed in *Quota and Voice Reform—Stocktaking and Further Considerations*, this implies that second round increases would be provided to the four members receiving first round increases in Singapore to the extent required to deliver the same overall proportionate reduction in out-of-lineness (under the two rounds) as other under-represented members.⁵ In most scenarios, all under-represented countries are assumed to be eligible for the second round, but a few scenarios are included to illustrate the potential impact of a higher threshold that would concentrate the increases on relatively more out-of-line countries.
- **Foregoing:** The proposals are based on the assumption that major advanced countries would be willing to forego part of the increases to which they would otherwise be entitled. For illustrative purposes only, the proposals assume a common approach for all eligible major advanced countries, recognizing that such countries may decide on a different distribution within the group. Two countries have so far expressed a willingness to forego any increase beyond the level that would restore their pre-Singapore voting shares, and the proposals adopt this assumption for all major advanced countries. As noted in *Quota and Voice Reform—Stocktaking and Further Considerations*, the extent of foregoing can make a significant difference to the adjustment in shares that is possible for any given overall increase. For purely illustrative purposes, the proposals also indicate the sensitivity of the results to a larger degree of foregoing—to post-Singapore rather than pre-Singapore voting shares.
- **Increase in basic votes:** The proposals assume a doubling of basic votes, which for the simulations presented here is sufficient to preserve the pre-Singapore voting share of low income countries. As noted above, however, one open issue is whether to go beyond this objective, and the proposals also illustrate the impact of a tripling in basic votes.

13. **As noted, the proposals explore two broad strands for using PPP GDP to determine ad hoc quota increases in the second round.** The first strand includes PPP GDP as part of a blend variable in the quota formula. While the relevant weights remain open, the proposals presented here assume a blend comprising 75 percent market rate GDP and

⁵ At the July discussion, Directors generally supported such an approach to ensure even-handed treatment across members, though a few Directors noted that, at a minimum, these four members should not lose quota share in the second round.

25 percent PPP GDP. For all of the scenarios presented under this approach, the formula also includes a compression factor of 0.95.

1/ Under the scenarios using a supplementary filter, a member country is eligible for an ad hoc quota increase if it meets the filter and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base.

2/ $0.5 \times \text{GDP} + 0.3 \times \text{Openness} + 0.15 \times \text{Variability} + 0.05 \times \text{Reserves}$.

3/ $0.5 \times \text{GDP} + 0.25 \times \text{Openness} + 0.2 \times \text{Variability} + 0.05 \times \text{Reserves}$.

4/ The filter (as recently proposed by a participant at a G-20 meeting in Durban) is calculated as the member's average share of global PPP GDP for the three year period ending in 2005 divided by the member's pre-Singapore quota share. PPP data for this filter are from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007). To meet the filter, a member's share of global PPP GDP must exceed its quota share by more than 50 percent (i.e., a ratio greater than 1.5).

5/ Includes China, P.R., and Hong Kong SAR.

14. **The second strand involves use of a formula using solely market rate GDP plus a supplementary filter based on PPP GDP.** The filter is used to add a small number of emerging market and developing countries to the list of countries that are under-represented under the formula in order to determine eligibility for second round increases. Such an approach was discussed in *Quota and Voice Reform—Stocktaking and Further Considerations* and the proposal builds on that approach in two key respects. First, the filter is used only to add countries rather than to also exclude countries from the eligible list. Second, the filter is based on members' shares in global PPP GDP and includes countries whose shares in global PPP GDP are substantially (more than 50 percent) larger than their actual quota shares,⁶ provided they are not substantially over-represented under the relevant

⁶ An approach along these lines was proposed by a participant at the G-20 deputies meeting in Durban on September 8–9. The earlier variant presented in *Quota and Voice Reform—Stocktaking and Further*

(continued)

quota formula (the text table indicates the countries that would meet this filter). In the filter variants considered here, the formula is based on a linear combination of the four quota variables without compression, but the possibility of some use of compression under this approach could also be explored.

15. **Under the filter approach, a decision would be needed on the size of the increases for over-represented countries brought in by the filter.** In the proposals presented here, it is assumed that these countries receive a 5 percent increase over their pre-Singapore voting share. Other metrics could, of course, also be considered. To ensure even-handed treatment vis-à-vis under-represented countries under the formula, it is proposed that under-represented emerging market and developing countries that also meet the filter test would receive an increase of no less than 5 percent over their pre-Singapore voting share.

IV. RESULTS

16. **Table 1 summarizes the results of these proposals in terms of the distribution of calculated quota shares among major country groups** (individual country data are provided in a separate supplement). For the combined formulas (involving both a GDP blend and compression), the aggregate calculated quota share of emerging market and developing countries increases by 1.1 to 1.5 percentage points relative to the outcome of the existing quota formulas, with most sub-groups showing an increase. The increases are somewhat larger in the formula with a higher weight for variability. Conversely, in the formulas with solely market rate GDP and no compression, the share of the same group declines by 3.7 to 4 percentage points.

17. **Table 2 shows the outcomes in terms of voting shares of proposals involving the combined formula approach** (outcomes in terms of actual quota shares are provided in the supplement). All simulations result in a further increase in the aggregate voting share of emerging market and developing countries following the second round, with the largest increases coming from the simulations involving a tripling of basic votes and a greater degree of foregoing.

18. **The results of the filter approach are illustrated in Tables 3–4.** As can be seen, the filter approach results in a shorter list of countries eligible for second round increases and a slightly higher uniform reduction in out-of-lineness for these countries compared with the combined formula approach. In terms of the movement of shares, however, the filter approach shows a similar but slightly smaller increase in the aggregate voting share of emerging market and developing countries.

Considerations (2007) was based on contributions to global growth on a PPP basis. At the July discussion, a number of Directors expressed the view that size should not be a criterion for determining which countries should benefit from the second round, and the proposal in this paper is neutral with regard to size. It also can yield very similar results to a filter based on contributions to growth, though variants of the latter could still be considered further.

19. **As noted, a higher threshold could potentially be used to concentrate the second round increases on under-represented countries that are relatively more out of line.** One such approach, which was proposed at the recent G-20 deputies meeting in Durban and is also shown for illustrative purposes in Table 4, would be to use a threshold ratio for out-of-lineness of 1.1 for countries qualifying for the second round. As can be seen, for the particular formulas shown here, such an approach could again allow a somewhat larger uniform proportionate reduction factor and result in a similar aggregate movement in voting share towards emerging market and developing countries to that resulting from the use of a combined formula and no filter.

20. **Overall, these simulations suggest that the different approaches discussed in this paper for using PPP GDP in the second round can deliver broadly similar results in terms of actual quota and voting shares.** This is true even though the results in terms of calculated quota shares under the two approaches are quite different. Other outcomes are obviously possible by changing the assumptions made in this paper. However, unless there is agreement on a larger overall second round, it would seem that generating significantly more movement in aggregate shares towards emerging market and developing countries would require a change in some key assumptions, such as a greater degree of foregoing on the part of advanced countries, or a different allocation method for the second round that would concentrate more of the increases on emerging market and developing countries.

V. ISSUES FOR DISCUSSION

Directors may wish to comment on:

- The appropriate objectives for the second round reform package.
- The relative merits of the two approaches proposed in the paper—a formula incorporating a blended GDP variable and compression, and the filter approach.
- The desirable weights for variables in the formula, especially the relative weights for openness and variability.
- The appropriate aggregate size of the second round ad hoc quota increase, the mechanism for allocating the increase to eligible members, and the size of the increase in basic votes.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specific formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ 0.50*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Including Korea and Singapore.

7/ Uniform proportional reduction in the gap between calculated and actual pre-Singapore quota shares, using the formula indicated above.
8/ PRGF-eligible countries.

Source: Finance Department.

1/ Calculated as the sum of variable weights multiplied by a country's shares in the global total of the respective variables.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold.

3/ For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

4/ GDP is blended using GDP weighted 75 percent at market exchange rates and 25 percent at PPP exchange rates. PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments (2007)* were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries; for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates.

5/ The compression (K) raises the quota formula to the power of K.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ These simulations assume a uniform proportional reduction of out-of-line ness, based on members' pre-Singapore quota shares and taking into account the first round ad hoc increases provided to four members. They also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; and c) foregoing by eligible G-7 members to the level specified above.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ GDP is blended using GDP weighted 75 percent at market exchange rates and 25 percent at PPP exchange rates. PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries; for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates.

4/ $Q = (0.5^*GDP\ Blend + 0.25^*Openness + 0.15^*Variability + 0.05^*Reserves)^{0.95}$.

5/ $Q = (0.5^*GDP\ Blend + 0.25^*Openness + 0.15^*Variability + 0.05^*Reserves)^{0.95}$.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-linearness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineeness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineeness; e) for underrepresented members eligible under the filter, a uniform proportionate reduction in out-of-lineeness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ $0.50^*GDP + 0.3^*Openness + 0.15^*Variability + 0.05^*Reserves$.

5/ $0.50^*GDP + 0.25^*Openness + 0.2^*Variability + 0.05^*Reserves$.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-linearness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineeness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667, under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineeness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineeness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ 0.5*GDP + 0.30*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.5*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Includes China, P.R., and Hong Kong SAR.

Table 5. Second Round Simulation - Illustration of Actual Quota Shares Based on the Combined Formula Approach 1/2

卷之三

1/ These simulations assume a uniform proportional reduction of out-of-line ness, based on members' pre-Singapore quota shares and taking into account the first round ad hoc increases provided to four members. They also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting source. Finance Department.

shares of LlC's; and c) foregoing by eligible G-7 members to the level specified above.
2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to and paid for their quota increases 11th Review proposed quotas are used. Includes Montenegro which became a member on January 18, 2007. Pre-Singapore shares have been converted to the new quota amounts as of January 1, 2007.

adjusted accordingly).
3/ GDP is blended using PPP weighted 75 percent at market exchange rates and 25 percent at PPP exchange rates. PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries; for nine countries with no WEO data, PPP GDP was estimated based on adjusted accordingly).

the countries' share in global GDP at market rates.

$$4/Q = (0.5*\text{GDP Blend} + 0.3*\text{Openness} + 0.15*\text{Variability} + 0.05*\text{Reserves})^{0.95}$$

$$5/Q = (0.5 * GDP\ Blend + 0.25 * Openness + 0.2 * Variability + 0.05 * Reserves) / 0.95.$$

6/ Including Korea and Sing

7/ Uniform proportional reduction

8/ PPRGF-eligible countries.

Source: Finance Department.

1/ These simulations assume a uniform proportional reduction of out-of-line ness, based on members' pre-Singapore quota shares and taking into account the first round ad hoc increases provided to four members. They also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; and c) foregoing by eligible G-7 members to the level specified above.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ GDP is blended using GDP weighted 75 percent at market exchange rates and 25 percent at PPP exchange rates. PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries; for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates.

4/ $Q = (0.5^*GDP\ Blend + 0.3^*Openness + 0.15^*Variability + 0.05^*Reserves)^{0.95}$.

5/ $Q = (0.5^*GDP\ Blend + 0.25^*Openness + 0.2^*Variability + 0.05^*Reserves)^{0.95}$.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter, if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ 0.50*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Including Korea and Singapore.

7/ Uniform proportional reduction in the gap between calculated and actual pre-Singapore quota shares, using the formula indicated above.

8/ PRGF-eligible countries.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-line ness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-line ness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-line ness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-line ness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007)).

4/ 0.50*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CGS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ 0.5*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.5*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Includes China, P.R., and Hong Kong SAR.

INTERNATIONAL MONETARY FUND

Quota and Voice Reform—Elements of a Possible Approach—Statistical Appendix

Prepared by the Quota and Voice Working Group¹

Approved by David Burton

1/ These simulations assume a uniform proportional reduction of out-of-lineness, based on members' pre-Singapore quota shares and taking into account the first round ad hoc increases provided to four members. They also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; and c) foregoing by eligible G-7 members to the level specified above.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotes are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ GDP is blended using GDP weighted 75 percent at market exchange rates and 25 percent at PPP exchange rates. PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments (2007)* were retrieved from the WEO databases as of January 31, 2007 (converted to SDRs) for 176 countries; for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates.

4/ $Q = (0.5 \cdot \text{GDP Blend} + 0.3 \cdot \text{Openness} + 0.15 \cdot \text{Variability} + 0.05 \cdot \text{Reserves}) \cdot 0.95$.

5/ $Q = (0.5 \cdot \text{GDP Blend} + 0.25 \cdot \text{Openness} + 0.2 \cdot \text{Variability} + 0.05 \cdot \text{Reserves}) \cdot 0.95$.

6/ Includes China, P.R., and Hong Kong SAR.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/QS) is greater than 0.66 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase total first and second round increase of 10.0 percent; b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for under-represented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and e) for over-represented members eligible under the filter, a 5% increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotes are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in *Quotas—Updated Calculations and Data Adjustments* (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in *Quotas—Updated Calculations and Data Adjustments* (2007).

4/ 0.50*GDP + 0.25*Openness + 0.15*Variability + 0.05*Reserves.

5/ 0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves.

6/ Includes China, P.R., and Hong Kong SAR.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQSAQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified (total first and second round increase of 10.0 percent); d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore

21 Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

in Quotas—Updated Calculations and Data Adjustments (2007) were retrieved from the WEO database as of January 31, 2007 (converted to SDRs for 2007). The data from the WEO database are used to calculate the share of global GDP at market rates for each country in the sample.

4/ 0.50*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CCQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.

4/ $(0.50^*GDP + 0.3^*Openness + 0.15^*Variability + 0.05^*Reserves)/0.95$.

5/ $(0.50^*GDP + 0.25^*Openness + 0.2^*Variability + 0.05^*Reserves)/0.95$.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.

4/ $(0.5^*GDP + 0.3^*Openness + 0.15^*Variability + 0.05^*Reserves)^{0.95}$.

5/ $(0.5^*GDP + 0.25^*Openness + 0.2^*Variability + 0.05^*Reserves)^{0.95}$.

6/ Includes China, P.R., and Hong Kong SAR.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-line ness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-line ness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-line ness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5% increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/25; we are retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/25.

4/ 0.5×GDP + 0.3×Openness + 0.15×Variability + 0.05×Reserves)×0.95.

5/ 0.5×GDP + 0.25×Openness + 0.2×Variability + 0.05×Reserves)×0.95.

6/ Includes China, P.R., and Hong Kong SAR.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQSI/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.

4/ $(0.50^*GDP + 0.3^*Openness + 0.15^*Variable + 0.05^*Reserves)^{0.90}$.

5/ $(0.50^*GDP + 0.25^*Openness + 0.2^*Variable + 0.05^*Reserves)^{0.90}$.

6/ Including Korea and Singapore.

7/ Uniform proportional reduction in the gap between calculated and actual pre-Singapore quota shares, using the formula indicated above.

8/ PRGF-eligible countries.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CCS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.

4/ (0.50*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves)^{0.90}.

5/ (0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves)^{0.90}.

6/ Includes China, P.R., and Hong Kong SAR.

1) Under these scenarios, all members are eligible for a quota increase if their out-of-lineeness (calculated quota share divided by actual quota share) is greater than 1.0. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of over-representation is less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase in total quota; b) basic quota to the level specified above; c) for underrepresented countries not also eligible under the filter, a uniform proportional reduction in out-of-lineeness or a 5 percent increase above their pre-Singapore voting shares.

2) Based on 1983-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3) PPP data from the quota database reported in SDR/07251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SDR/07251.

4/ 0.50 GDP + 0.25 Openness + 0.2 Variability + 0.05 Reserves/190.

5/ 0.50 GDP + 0.25 Openness + 0.2 Variability + 0.05 Reserves/190.

6/ Includes China, P.R., and Hong Kong SAR.

- 1/ Under these scenarios, all members are eligible for a quota increase if their out-of-linearness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineeness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineeness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; e) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.
- 2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

- 3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.
- 4/ (0.5*GDP + 0.3*Openness + 0.15*Variability + 0.05*Reserves)^0.90.
- 5/ (0.5*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves)^0.90.
- 6/ Including Korea and Singapore.
- 7/ Uniform proportional reduction in the gap between calculated and actual pre-Singapore quota shares, using the formula indicated above.
- 8/ PRGF-eligible countries.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-lineness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-lineness (calculated quota share over actual quota share, or CQS/AQS) is greater than 0.667 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 8.1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-lineness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-lineness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5 percent increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM/07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM/07/251.

4/ $(0.5 \cdot \text{GDP} + 0.3 \cdot \text{Openness} + 0.15 \cdot \text{Variability} + 0.05 \cdot \text{Reserves})^{0.90}$.

5/ $(0.5 \cdot \text{GDP} + 0.25 \cdot \text{Openness} + 0.2 \cdot \text{Variability} + 0.05 \cdot \text{Reserves})^{0.90}$.

6/ Includes China, P.R., and Hong Kong SAR.

1/ Under these scenarios, all members are eligible for a quota increase if their out-of-line ness (calculated quota share divided by actual quota share) is greater than 1.1. Emerging market and developing countries are also eligible under a supplementary filter if the member's share of global PPP GDP is 50 percent greater than its actual quota share, and its level of out-of-line ness (calculated quota share over actual quota share, or QGS/AQS) is greater than 0.67 under the specified formula, implying that the member is over-represented by less than 50 percent using its calculated quota share as a base. These scenarios also assume: a) an 1 percent increase (total first and second round increase of 10.0 percent); b) basic votes to the level specified above, and protection of the pre-Singapore voting shares of LICs; c) foregoing by eligible G-7 members to the level specified above; d) for underrepresented countries not also eligible under the filter, a uniform proportionate reduction in out-of-line ness; e) for underrepresented countries also eligible under the filter, a uniform proportionate reduction in out-of-line ness or a 5 percent increase above their pre-Singapore voting shares, whichever is greater; and f) for over-represented members eligible under the filter, a 5% increase above their pre-Singapore voting shares.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

3/ PPP data from the quota database reported in SM07/251 were retrieved from the WEO database as of January 31, 2007 (converted to SDRs) for 176 countries and, for nine countries with no WEO data, PPP GDP was estimated based on the countries' share in global GDP at market rates, as published in SM07/251.

4/ 0.5*GDP + 0.3*Openness + 0.15*Variable† + 0.05*Reserves†*0.90.

5/ 0.5*GDP + 0.25*Openness + 0.2*Variable† + 0.05*Reserves†*0.90.

6/ Includes China, P.R., and Hong Kong SAR.

Source: Finance Department.

1/ Calculated as the sum of variable weights multiplied by a country's shares in the global total of the respective variables.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used.

3/ For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).

4/ $(0.50^*GDP + 0.3^*Openness + 0.15^*Variability + 0.05^*Reserves)^K$. The compression (K) raises the formula to the power of K.

5/ $(0.50^*GDP + 0.25^*Openness + 0.2^*Variability + 0.05^*Reserves)^K$. The compression (K) raises the formula to the power of K.

6/ Including Korea and Singapore.

7/ PRGF-eligible countries.

1/ Calculated as the sum of variable weights multiplied by a country's shares in the global total of the respective variables.

2/ Based on 1993-2005 data. Reflects the impact of adjustments to current receipts and payments for re-exports, international banking interest, and non-monetary gold. For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used.

3/ For the three countries that have not yet consented to, and paid for, their quota increases, 11th Review proposed quotas are used. Includes Montenegro, which became a member on January 18, 2007 (pre-Singapore shares have been adjusted accordingly).
 4/ (0.50*GDP + 0.3*Openness + 0.15*Reserves)^K. The compression (K) raises the formula to the power of K.
 5/ (0.50*GDP + 0.25*Openness + 0.2*Variability + 0.05*Reserves)^K. The compression (K) raises the formula to the power of K.
 6/ Includes China, P.R., and Hong Kong SAR.

**Statement of the Managing Director on
Quota and Voice—Elements of a Possible Approach
Executive Board Meeting
October 3, 2007**

1. Continuous progress has been made over the past year on the design of a further package of quota and voice reforms, in line with the Board of Governors Resolution approved in Singapore last year. This reflects the shared appreciation of the importance of quota and voice reform for the credibility and effectiveness of the Fund, with the wide interest in this subject also reflected in the discussions that have taken place in groupings outside the Fund. We now have the chance to build importantly on this progress, and move closer toward completion of the second stage of reform.
2. My sense from our last meeting in July was that the key second stage issues had been discussed extensively and that it was time to narrow the debate. To this end, management and staff were to identify specific proposals that would take account of the views and guidance provided to date and could provide a basis for building the needed broad consensus. The proposals set out in the paper prepared for this Board discussion seek to reflect the convergence of views that has taken place. At the same time, given the differences that still remain to be resolved, the paper offers options on some key issues for further Board consideration. Of course, on all aspects of the formula and second-round package, further evolution can take place, and I recognize that many issues are interrelated.
3. The proposals take as a starting point that the reform, aimed at raising the shares of dynamic economies, many of which are emerging market economies, should also achieve a further shift in voting shares toward emerging market and developing countries as a whole. I believe this will be needed for the reform to be credible, as well as to achieve the necessary broad support. I also sensed broad agreement from the last discussion that PPP GDP should play a role in the determination of quota increases in the second round, with its precise role still to be defined as discussed below. The strengthening of the voice and representation of the low income countries, of course, remains a core objective of the reform.
4. I also see broad consensus that the variables in the formula should be limited to updated and modernized versions of the four variables included in the existing formulas—GDP, openness, variability and reserves. Further improvements in some variables have been considered (e.g., openness and variability), but as yet it has not been possible, partly for reasons of data availability, to develop satisfactory proposals that could command broad

support. While work on these issues is ongoing, I would suggest that we not let further refinement of the definition of variables delay progress toward an agreement.

5. Views have also converged to some extent on the weights to be given to variables in the formula, though with some differences remaining, especially on the relative weights to be assigned to openness and variability. A role for a compression factor in the formula has also received considerable support. In addition, I see some convergence on the size of the second round ad hoc quota increase, though in this area some differences also persist.

6. In discussing the proposals in the paper, Directors may find it useful to focus in particular on the following issues: (i) the role for PPP GDP—specifically whether it should be included in the formula itself as part of a blended GDP variable or be taken into account through a filter along the lines discussed in the paper; (ii) the role for compression in the new quota formula; (iii) the size of the increase in basic votes, including in light of the need for adequate voice for low income countries; (iv) the overall size of the second round ad hoc quota increases; and (v) the overall redistribution of voting power that should come out of the reform, which is closely linked to the first four issues.

7. Regarding the role for PPP GDP, Directors may wish to consider whether the filter approach could be enhanced by a commitment to continued use of the filter for some period into the future. In a similar vein, under a blended GDP approach, consideration could be given to reviewing the role for PPP GDP in the formula after some period. Both modifications would recognize that, while differences between PPP GDP and GDP at market exchange rates are likely to persist for some considerable time for many members, gradual convergence can be expected to take place.

8. On the increase in basic votes, we agreed in Singapore last year that this should be at least a doubling, and at a minimum protect the voting power of low income countries as a group. Let me suggest to you that we try to go beyond this commitment, if possible to at tripling of basic votes, and achieve a strengthening of the small voting power of this group. In this general connection, I would note that a paper on an amendment to the Articles of Agreement that would allow for an additional Alternate Executive Director for the offices with the largest constituencies is being issued to the Board.

9. As regards the overall redistribution of voting power more broadly resulting from the reform, the extent to which G-7, and possibly other advanced countries, are willing to forego part of the increases for which they may be eligible will have an important bearing on the shift achieved. The paper assumes for simplicity that all G-7 countries forego to the same extent—in most examples, their voting power is held to no more than its pre-Singapore level. A greater degree of foregoing is also shown to illustrate the sensitivity of the results to this assumption. However, a more differentiated approach that takes into account the degree of underrepresentation of individual members may be needed. I would also suggest that other

advanced countries that may be eligible for quota increases consider whether they might forego at least part of the adjustment.

10. A further issue for consideration arises with respect to the four countries that received increases in Singapore in so far as in some scenarios they do not receive increases in the second round, even though they remain substantially underrepresented. Directors' views on whether some increase for these four members should be safeguarded as part of the second round would also be helpful as we seek to refine the proposals.

11. We have already come a very long way on what is a technically complex and politically charged set of issues, many of which have defied agreement in the past. Let us now continue to work together in spirit of compromise and with the good of the Fund at heart to move further toward a historic agreement on the second-round reform package.

October 9, 2007

**The Chair's Summing Up
Quota and Voice Reform—Elements of a Possible Approach
Executive Board Meeting 07/86
October 3, 2007**

Directors welcomed the opportunity to continue their discussions on the second round quota and voice reforms. They stressed again the importance of the reform for the continued effectiveness and credibility of the Fund, and underlined their commitment to continue to work expeditiously toward achieving the needed broad consensus. The proposals set out in the staff paper seek to build on the areas of agreement that have emerged to date, and to make further progress in bridging the remaining gaps. Directors saw today's discussion as an important further step in the process of converging towards an agreement on the second round reform package, although many Directors took the view that they were unable to support the proposals put forward in the staff paper, which they viewed as limited.

In terms of broad objectives, Directors reiterated that the reform would need to enhance the representation of dynamic economies, many of which are emerging market countries. Directors broadly agreed that, while the focus would continue to be on dynamic economies that have become underrepresented, one outcome of the second round reforms should be a further increase in the voting share of emerging market and developing countries as a whole. Many Directors supported a substantial increase in the calculated and actual quotas for these countries. Several Directors also underscored that the increase in the shares of underrepresented dynamic economies should not come at the expense of other emerging market and developing countries. Views differed on the extent of desirable overall movement in aggregate shares in the second round. A number of Directors indicated that they could support an adjustment broadly along the lines illustrated in the staff paper, while many other Directors considered that a significantly larger shift in shares is called for to effect a meaningful change and credible reform. A number of Directors saw scope for periodic reviews to ensure that quota shares evolve in tandem with global economic realities.

Directors reaffirmed that the new quota formula should be simple and transparent, be consistent with the multiple roles of quotas, be feasible to implement statistically, and produce results that are broadly acceptable to the membership. In this context, most Directors emphasized that the quota formula should stand on its own merits in achieving the objectives of the reform, without necessarily requiring recourse to adjustment mechanisms. Directors agreed that the variables in the formula should be limited to updated and modernized versions of the four variables included in the existing formulas—GDP, openness, variability, and reserves—which provide a reasonable basis for moving ahead, while recognizing that work should continue on further refinements in the future. Many Directors, however, reiterated their previous concerns about the definitions of openness and variability, and called for further work to address the shortcomings in these variables as part of the second round

quota increases. In this connection, Directors broadly acknowledged that data availability issues preclude the inclusion of financial openness at this stage, and that this issue needs to be part of future work.

Today's discussion has also clarified views on the weights to be given to the quota variables. Directors reiterated that GDP should be the most important variable, with most Directors indicating that a weight of 50 percent appears appropriate. A few Directors could go along with this weight for GDP if combined with a meaningful compression factor. There was also broad agreement that reserves should have a relatively small weight, although some argued for a higher weight. Some differences remain on the weights to be assigned to openness and variability. Many Directors preferred a higher weight on variability, appropriately defined, relative to openness to capture the concept of potential need and to reflect their concern regarding the definition of openness, which, they argued, should be revised to exclude intra-currency union flows. A number of other Directors did not support the exclusion of intra-currency union flows for conceptual reasons as previously discussed, and favored a larger weight for openness, of at least 30 percent.

Directors generally agreed that PPP GDP should play a role in determining the second round quota increases, though views differed on the precise nature of that role. Many Directors supported, and a few others could consider, its inclusion as part of a blended GDP variable in the new quota formula, in order to capture the non-financial roles of quotas, and recognizing that PPP GDP provides an alternative measure of members' weight and role in the global economy which is not adequately captured at this stage by a formula based purely on market rate GDP. Many of these Directors generally stressed the importance of a new formula that substantially raises the calculated quota share of emerging market and developing countries as a whole, and observed that it is difficult to achieve such an outcome without considerable reliance on PPP GDP in the formula. The staff suggestion that consideration could be given to reviewing the continued inclusion of PPP GDP in the formula after some period was noted. For many of these Directors, PPP GDP should have a weight of at least 50 percent in a GDP blend variable, although some other Directors argued that, if a blend GDP variable is used, PPP GDP should have a minority weight in light of the important financial role of quotas and taking account also of the continuing data issues surrounding PPP GDP.

Many Directors considered that the new quota formula should remain based solely on market rate GDP. These Directors were willing to support the use of a filter based on PPP GDP to capture emerging market and developing countries whose weight and role in the world economy have been growing but whose position is not yet fully reflected in the quota formula. They generally supported the approach illustrated in the staff paper whereby members could be eligible for second round increases if their shares in global PPP GDP are substantially larger than their shares in actual quotas, and provided they are not substantially over-represented under the new quota formula. It was noted that the precise metrics for determining eligibility under this approach would need further refinement. Also, it was suggested that consideration could be given to exploring ways to give the filter more durability beyond the current reform, including the possibility that the Board of Governors Resolution on the second round reforms could include a commitment that PPP GDP would be taken into account when considering quota adjustments for some time into the future.

Some other Directors were of the view that a PPP-weighted filter could be considered, but noted their continuing preference for including PPP GDP in the quota formula.

Most Directors continued to favor use of a compression factor as a means of reducing to some degree the influence of economic size in the quota formula. A judgment would need to be made on its level, taking into account that too large a compression factor could make calculated quota shares less reflective of members' relative economic size. However, some Directors were willing to consider a larger degree of compression than the factor of 0.95 illustrated in the staff paper. While noting that the variants of a filter-based approach presented in the staff paper did not include compression in the formula, some Directors considered that the possibility of meaningful use of compression under this approach should also be explored. A few other Directors, however, did not see a need for compression if the filter approach is pursued.

On the size of the second round ad hoc quota increases, a number of Directors indicated that they could support, as a maximum, an overall increase (first and second rounds combined) of 10 percent, implying a second round increase of 8.1 percent. A number of other Directors, however, stressed that an overall increase larger than 10 percent would be needed to allow enough room for a meaningful realignment of shares. These Directors viewed an overall increase of 12.5 percent as the minimum that is needed, with some favoring consideration of even larger increases. A few other Directors stressed that, according to the Board of Governors Resolution, the size of the increase will be determined after the completion of the work on a new quota formula.

On the allocation method for the second round quota increases, many Directors favored the approach illustrated in the staff paper, whereby increases would be allocated to under-represented members under the new quota formula based on achieving a uniform proportionate reduction in the gap between calculated quota shares and pre-Singapore actual quota shares. They noted that such an approach would be consistent with that followed in the first round, and could result in significant reductions in the degree of under-representation for a relatively large number of countries. Other Directors noted, however, that this would still leave a number of countries with actual quota shares well below their calculated quota shares, and called for the second round increases to be more heavily concentrated on those members that are most out-of-line. Some of these Directors favored further exploration of a threshold approach, or alternatives such as setting a cap on the maximum degree of out-of-lineness. A number of Directors, however, saw a threshold as being inconsistent with the principle of equal treatment. Some Directors also observed that the four members receiving first round increases in Singapore would not necessarily qualify for second round increases under the approach illustrated in the staff paper, and considered that, at a minimum, these four members should not lose quota share in the second round. A few Directors suggested that post-Singapore quota shares could be a possible basis for comparison in measuring underrepresentation.

It was noted that, under the filter approach, if adopted, a decision would also be needed on how to allocate increases to the members that are over-represented under the new formula but would qualify for ad hoc increases under the filter—taking into account the need to ensure, as illustrated in the staff paper, even-handed treatment with respect to members

qualifying under the filter and also under-represented under the formula. The details of the allocation method under a filter approach will need further work.

Directors noted that the willingness of major advanced countries to forego part of the increases to which they would otherwise be entitled can make a significant difference to the overall adjustment in shares that is possible for any given overall increase—although it was underscored that this should not reduce the importance of developing an appropriate quota formula. In this connection, a number of Directors stressed the need for major advanced countries to clarify their commitments in this area, with some urging that consideration be given to foregoing beyond pre-Singapore voting shares. It was noted that foregoing by other advanced countries could also play a role in bringing about the needed adjustment.

Directors stressed that the increase in basic votes is an integral part of the quota and voice reform, and a key measure for enhancing the voice and participation of low-income countries, one of the core goals of the reform. While the precise size of the increase will need to be considered along with the second round increase, Directors reaffirmed their commitment to provide for at least a doubling of basic votes as agreed in Singapore, with many calling for at least a tripling. Some Directors recalled the importance of ensuring that the ratio of the sum of the basic votes of all members to the sum of members' total voting power remains constant following the increase in this round in the event of any subsequent changes in the total voting power of members. Directors also looked forward to early consideration of the issue of an amendment to the Articles that would enable each Executive Director elected by a large number of members to appoint more than one Alternate Executive Director, and a few Directors reiterated their call for consideration of decision-making by double majorities as part of the current reform.

In sum, I see today's discussion as being an important further step towards building the needed broad consensus on quota and voice reform. Further progress has been made in identifying the areas of agreement, as well as in clarifying those areas where differences remain. On this basis, staff will prepare a draft of the Executive Board's report to the Board of Governors on quota and voice issues for the consideration of Directors prior to the Annual Meetings, which will take stock of the tangible progress that has been made over the past year as well as highlight the key issues on which further work is needed. Looking further ahead, I am confident that we will be able to continue to work towards reconciling the remaining differences in the same spirit of compromise and pragmatism that has characterized our work thus far.
